BUST, a town which formerly stood in the modern Afghanistan, on the left bank of the Helmand just below its junction with the Arghandab. The situation of this town in the angle between the two rivers where the roads from the west (Herat and Zaranj) unite to cross the Helmand and continue eastwards to Baluchistan and India, at the place where the river begins to be navigable, seems to have been an exceedingly favourable one.

Great earthworks in the neighbourhood of Bust, which was one of the centres of ancient Iranian civilisation, point to a great prosperity in ancient times. At the beginning of the 6th century we find Bust in the possession of the Ephthalites from whom Khumar b. Adhghanwan won back the town.

It was won for Islam by 'Abd al-Rahman b. Samarra in the period following. Bust appears to have been an outpost of Arab dominion against the independent native chiefs of the lands adjoining on the east who bore the name or title of *Zabul* [see the article 'AN AL-BAGGAS A. MUHAMMAD A. AL-AGHA'II, p. 56 and cf. Marquart, *Erdbilder*, p. 350]. The Arabs sometimes consider Bust as being in Sistan, which in the narrower sense did not strictly stretch so far to the east. The founder of the ruling dynasty of Saffarids who came from Zabul, Ya'qub b. al-Lath (254-265 = 868-875), is said to have spent a year in Bust during his campaign. In 366 = 976, Bust was taken by Subuktigin, the founder of the Ghaznavid dynasty. It is from the period shortly before and shortly after this event that the descriptions of the town by Ibn Khaldun and Muqaddasi date. The former speaks of the Indian trade of Bust, both mention the fields of wheat, which crossed the Helmand and prairie the rich orchards in the neighbourhood. The Ghaznavid period appears to have been the most flourishing in the history of Muhammadan Bust. Muqaddasi speaks of the military town of al-'Askar (the mo-

derm ruins of Lashkari Bazar) lying $\frac{1}{2}$ farsakh east of Bust, as the dwelling of the Sultan. Bust is repeatedly mentioned as the royal residence. In 447 = 1048 'Abd al-Rahid's general succeeded in defeating IM'ad's and Alp Arslan's Saljuqs, who had made a raid into Sistan, not far from Bust. A hundred years later the Ghaznavids received the blow from which they never recovered. The Ghaznavid 'Ala al-Din Ghanaviz ravaged the kingdom of Bahram Shih and utterly destroyed the capital Bust; the glory of Bust seems to have been shattered by this blow. Its favourable situation alone enabled it to drag on a wretched existence during the following centuries. Any prospect of a more prosperous future was destroyed by the invasion of Timur's hordes at the end of the 14th = 15th century. The destruction of Rustam's dam transformed Sistan into a desert as it depended for its prosperity on irrigation from the Helmand. The fortress of Bust alone, owing to its strategic position, survived many a storm till it was finally destroyed by Nadir Shah in 1738. Its walls still rise high above the bank of the Helmand and a wide area covered with ruins testifies to the erstwhile splendour of the seat of the Ghaznavids.

Marquart, *Erdbilder*, see Index; Bellw, *From Indus to the Tigris* (London, 1874), p. 172-177. (K. Hartmann.)

AL-BUSTA, The 'Post', Arabic pronunciation of the Turkish Posta [q. v.]

AL-BUSTANI, the name of a prominent Maronite family which has produced several literary men who have rendered considerable service to the Arabic language and literature. The most deserving of mention is Butrus al-Bustani who was born at Dibbiya (between Haida and Beirut) in 1819 and died in May 1883. He received his early education in the training-college of 'Ain Warba but in 1840 he became connected with the American Mission in Beirut and became a convert to Protestantism. He then received an appointment as teacher in the college in 'Abeish and composed a textbook on Arithmetic entitled *Kutub al-Hisab*. After a stay of two years there, he went to Beirut and worked on the translation of the Pentateuch into Arabic, undertaken by E. Smith. At the same time he was engaged in his Arabic dictionary *Muhtasab al-Muhtasab* (ed. 1867-1869) of which he prepared an abridgement, the *Kutub al-Muhtasab* (printed at Beirut, 1869). In 1870 he founded the newspaper *al-Diyar* but afterwards another *al-Diyar* and finally the magazine *al-Munir*. His plan of publishing a list of proper names, after he had finished his dictionary, was enlarged in 1873 to his beginning to publish an Arabic encyclopaedia entitled *al-Ma'arif* assisted by his son Selim al-Bustani and other collaborators (1876). When the eighth volume was about to appear, Butrus died, but the work was continued by his son Selim on the death of the latter also in 1883. It was continued by his other sons and a relative Sulaiman al-Bustani and others till its completion in 1898. — The Salimian, just mentioned, was no less re-

On military history Wāṣi Buṭrān is particularly prominent in the reign of 'Alid al-Malik. This Caliph used to spend the winters in Buṭrān during his campaign against Maṣab in the years 69—71 = 689—691. His camp was there, and it was the starting point for his military operations. cf. Wellhausen, *op. cit.* p. 117—119; Weil, *Geschichte der Califen*, I. 397, note 2; *Hamān* (ed. Freytag), p. 658, v. 6. In the war between the 'Abbasids and the Syrian Ḥamāsians Buṭrān is again mentioned. The army sent by al-Mubarak under Abu 'l-Aghar was surprised by the Ḥamāsians here in 90 = 903 and utterly routed.

(M. STRAUSS.)

BUṬRUS **al-BUṬRĀNĪ**. [See **al-BUṬRĀNĪ**.]

BUWAṬ, the name of several places in Egypt. According to Rohnet Bey's *Historische Geographie* there are two places in modern Egypt of this name. **BUWAṬ** is however pronounced Buṭṭ.

1. A *naḥiya* with 200 inhabitants in the district of Damahār, and the province of Bahariya, and 2. a *naḥiya* with 1449 inhabitants in the district of Bahariya in the province of Asūf.

'Alī Maḥṣar mentions a third place of this name in his *Ḥiṣṣat al-Bihar* in the province of Baḥr Saḍf in the administrative district of al-Zakariya. This appears in Rohnet Bey as Abūṭ and belongs in the district of Waḡa. **BUWAṬ** with 1364 inhabitants in the district of Daḥrāz, in the province of Asūf, must also be mentioned here. One of these places was the chief town of a district (*ḥiṣṣa*) in the middle ages (Kalkandamī, *taḥṣīn*, Wartenfeld, p. 94). As the name of this district is written **BUWAṬ** by Abu 'l-Fida's time, it could perhaps be identified with N^o. 3; but according to Kalkandamī, *loc. cit.* the identification with N^o. 2 is more probable. Vāṣi in *Yahyā*, famous scholar and contemporary of al-Shāfi'ī (d. 231 = 845-846) took his name al-Buwaṭ from one of these places, presumably N^o. 3.

(C. H. BECKER.)

BUXAR, a place in British India, on the railway from Bombay to Calcutta, west of Bankipore. In 1764, the English under Munro defeated here the Nawab Wazir al-Qadī and the Great Mughal Mīr 'Alam.

BÜYIDS or **Buwayhids**, a Persian dynasty whose founder Abū Ḥajjāj Būya (Buwaḥ) is represented by some to have been a descendant of the Sasanian king Bahmān Gōr. The alleged genealogical table of the Būyids, who were originally freedmen in Dailam, does not go back to the Sasanian king himself but only to his

first minister Mīr Narsā; little reliance is to be placed on this table however and the whole is apparently only an attempt to glorify the dynasty. A chief of a warlike horde, which consisted mainly of Dailamites, Abū Ḥajjāj had already played a prominent part in the struggle between the 'Alids and the Sāmānids; the real founders of the dynasty however, which rose so rapidly, were his three sons 'Alī, Ḥasan and Aḥmad. After the fashion of their countrymen they preferred to be regarded as *Shī'as*, but for these wild warlike religious questions were of quite subordinate importance. After the Būyids had enlisted in the service of Marḥūm b. Ziyār, who was at the height of his power about 320 (922), the eldest brother 'Alī was appointed governor of Kārdj (S. E. of Hamadān), but when the latter defected the Caliph Kāḥir's troops and occupied Isfahān, Marḥūm began to seek the rivalry and ambition of the Būyids and returned Isfahān to the Caliph whereby he provoked them to open hostility. Aḥmad had already been defeated by the Caliph's troops; the place to fall was Nāwbandūghān, which was occupied in 321 (933) by 'Alī, while the brother Ḥasan drove the Arab garrison from Kārdj. In the following year the three brothers succeeded in taking Shīrāz and occupying the whole province; after the assassination of Marḥūm in 322 (935), his brother and successor Washmugh was unable to hold Media which province also fell into the hands of the Būyids. While 'Alī remained in Fārs and Ḥasan ruled in Media, Aḥmad conquered Kirmān in 324 (935-936) and kept gradually advancing westwards. When in Jumādā I 334 (November 945) he entered Baghdād, the Caliph al-Mustakfī had to give him the title of Amīr al-Bihar and give him the honorary title of Mīr al-Dawla. At the same time 'Alī and Ḥasan received the titles 'Imān al-Dawla and Rukn al-Dawla respectively, and similar pompous titles were bestowed the usual appellations of the Būyid rulers. A few weeks later in Jumādā II 334 (January 946) Mīr al-Dawla had the unfortunate Caliph blinded, and proclaimed Abu 'l-Faḥr al-Faḥr, a son of al-Mahdī, his successor under the name of al-Mu'izz. The Caliphate now passed through a period of the deepest humiliation and the 'Commander of the Faithful' became a mere puppet in the hands of the Būyid Amīr. According to one account, Mīr al-Dawla went as far as to adopt the title of *Shāh*; this is not confirmed by the coins however, on which the Būyids only bear the title Amīr or Mīr. In the year 338 (949-950) al-Dawla died and he be left no male heir; the next eldest brother Rukn al-Dawla was recognised as head of the family while the government of Fārs passed to his son 'Aḥmad al-Dawla. Dissensions soon broke out within the family however. When Mīr al-Dawla died in 356 (967), his son 'Imān al-Dawla Bakhtiyār succeeded him in Kirmān, Kūrdjān and the 'Irāq. The latter was unable to maintain proper discipline among his troops who consisted partly of Dailamites and partly of Turks, but had to seek the assistance of his cousin 'Aḥmad al-Dawla who restored peace but took Bakhtiyār prisoner and seized his lands. Rukn al-Dawla managed to bring about a reconciliation between them and Bakhtiyār resumed his lands again. After the death of Rukn al-Dawla in 366 (976), hostilities

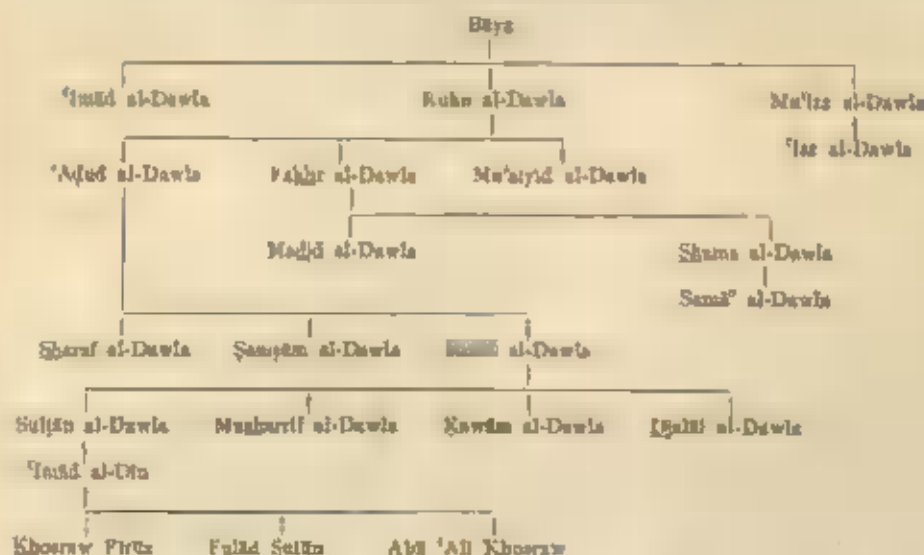

broke out again. He had divided the kingdom among his three sons and this plan, which has so often proved fatal, brought misfortune to the Bayids also. The entirety of the whole kingdom was to fall to 'Ajud al-Dawla, while Mu'ayyid al-Dawla was appointed governor of Isfahan and the third brother Fakhr al-Dawla received the remaining province of Media. After 'Ajud al-Dawla had defeated Bahā'iyār's troops and subjugated all 'Irāq to his rule, he next deprived his brother Fakhr al-Dawla of his kingdom. When the latter sought to make himself independent, he was attacked and had finally to flee to Khurāsān. 'Ajud al-Dawla was now able to unify the whole kingdom under his sceptre and in his reign the dynasty reached its zenith. After his death in 372 (983) war broke out among his three sons. In the following year Mu'ayyid al-Dawla died childless and while 'Ajud al-Dawla's sons, Shams al-Dawla, Samshun al-Dawla and Bahā' al-Dawla were fighting with one another, their uncle Fakhr al-Dawla was recalled from his exile by the nobles and recognized as ruler in Media, Tabaristan and Khurāsān. The war between the sons of 'Ajud al-Dawla ended in 380 (990) with the triumph of Bahā' al-Dawla. The latter died in 403 (1013), and under his four sons, Sulaym al-Dawla, Muḥammad al-Dawla, Kawthar al-Dawla, and Izzat al-Dawla, and their successors, the family became more and more divided and the incursion of the Turkish and Seljuqite mercenaries hastened more and more so that the kingdom gradually fell to pieces. With his power disappearing before his eyes the irony of fate prompted Izzat al-Dawla to become dissatisfied with the hereditary title of Amir and to adopt the old Persian title of 'King of Kings'.

The authority of the line of Fakhr al-Dawla next collapsed. In 388 (988) Kaḥṭā b. Waḥḥāgīr had conquered Khurāsān and Tabaristan, and ten years later the Kurd Kaḥṭayida (Kakwayids) seized Isfahan. Hamadshāh also finally fell into their hands and in 420 (1029) the good-for-nothing Maḥḥūd al-Dawla, a son of Fakhr al-Dawla, was overthrown by Maḥmūd b. Subuktigin and taken to Khurāsān.

It was now the turn of the other Bayids. Under Sulaym al-Dawla's son 'Isḥāq al-Din the state of affairs was still endurable; but after his death in 440 (1048) the former confusion broke out again. In Baghdad the Sunnis and Shī'ites were fighting with one another, and in the province there was war between 'Isḥāq al-Din's two sons, Khawraw Firds and Firds Sulaym. The latter had to take to flight and allied himself with the Saljuqs, while Khawraw Firds was recognized as Amir of the 'Irāq with the title al-Malik al-Rahim. In 447 (1055) however, the Saljuq Sultan Tughrul Bey entered Baghdad and put an end to Bayid rule. The last Amir of the dynasty, al-Malik al-Rahim, ended his days in confinement.

The Bayids, with the exception of 'Ajud al-Dawla, had little time for the arts of peace. It is to 'Ajud al-Dawla's honour that he found time to attend to the domestic development of his kingdom as far as lay in his power, by encouraging poets and scholars, building mosques, hospitals and other public buildings, repairing canals and wells which had become filled up and granting funds from the state treasury for the relief of the poor. This period of peaceful prosperity was of but short duration and after his death the kingdom resumed its downward course.

GENEALOGICAL TABLE OF THE BAYIDS.

BUZĀ'Ā (بوزاء), a town in Syria, west of Haleb, Long. 37° 65' E. (Circum.) and Lat. 36° 13' N., in the middle ages the most important place in the district of Bushān (q. v., p. 806). The various pronunciation of the name as Buzā, which meets us as early as Vāqūf, is the only one in use in the present day. According to Ibn al-Dubāi (vii = xiv century) Buzā was in his time midway between a town and a village in Akra. Its abundant water supply, flourishing gardens and fine houses are praised. A strong castle (*ḥaṣṣ*) rose above the town; outside of it stood Abu 'l-Fuḍl tells us, the shrine (*maṣḥab*) of 'Alī b. 'Alī Ḥalīl, brother of the Caliph 'Alī (see above, p. 239). M. v. Oppenheim copied three inscriptions on the mosque at the west end of Buzā, which refer to Malik Saḥib Ḥamīd (reigned 569—577 = 1174—1181), son of Nūr al-Dīn, see van Berchem, *op. cit.*, nos. 76—77. The Crusaders conquered Buzā after a seven days' siege of the citadel in 532 = 1138; in the same year however it was taken from them again by Zangī. In 571 = 1175, Ḥalīl al-Dīn (Saladin) gained possession of it.

At a short distance from Buzā, 5 miles to the north, lies al-Baḥ (*="the gate"*) 1050 feet above sea level (see Haddad, *Faṣṭavus*, p. 394) an important station in the middle ages on the road from Haleb to Manbij, about a day's journey from each but much nearer to Haleb in distance. It was once regarded as a sort of suburb of Buzā, whence it is occasionally also called Bū al-Buzā. In Vāqūf's time Buzā was an important market for cotton goods which were transported from it to Damascus and Egypt. The whole neighbourhood between Haleb and Manbij has always been a famous cotton country. On the inscriptions from Buzā (of the xiv and xvth century) see van Berchem, *op. cit.*, nos. 63—67. The village of Tadhī, the modern Tadhī, lies near Buzā 146 to the southwest; on two Arabic inscriptions from there, see van Berchem, *ibid.* 68—69.

BUZĀ'Ā, governor of Fars under the Saljuqs. Ruzba was one of the Emirs of

Manjshar, governor of Fars, and ruled the province of Khuzistan on his behalf. He was therefore with the troops of his overlord, when the latter in alliance with the other Emirs advanced against the Saljuq Sultan Alaḥ and was taken prisoner in the battle of Kuzhūba (other authorities give the place of encounter as Paḥl Angūst) and afterwards put to death (532 = 1137—1138.) While the Sultan's troops were beginning to plunder the hostile camp immediately after the battle, Ruzba fell upon them and put them to flight; he captured several distinguished Emirs of the Sultan and the latter himself only escaped with great difficulty along with the Atabeg Kara Sonkor. Fortune of the slaying of his overlord, Ruzba had them all put to death including Kara Sonkor's son. To revenge the latter's death, his father undertook a campaign into Fars in the following year and placed the Saljuq prince Saljuq Shāh in command of the operations. Hardly had Kara Sonkor set off with his troops, when Ruzba, who in the interval had retired to the fortress of Saḥl Dī (Ḥalīl al-Baḥ), appeared again and took Saljuq Shāh prisoner as he was left without troops (534 = 1139—1140). Saljuq Marḥūm therefore in hand over to him the province of Fars, and Ruzba managed to make his position more secure by making an alliance with two other Emirs, 'Abdā, Lord of al-Baḥ and 'Abd al-Rahmān Taghanyarak. The Sultan bore the catalogue of these Emirs for a time, but was finally able to regain his independence by treacherously murdering both of them. When Ruzba then took the field against the Sultan, he was taken prisoner at the battle of Marḥū Ḥamagīn, a day's journey from Hamadān, and put to death in 542 (1147).

BUZURG b. SĀHĀVĀY, a master of Rāmshūr (vth = xth century) and author of the *Kitāb al-Naḥṣ al-Hind*, edited by P. A. van der Lih (Liden, 1883—1886) with a translation by M. Devin, a collection of sailors' tales about the lands of the Indian Ocean, which are often full of fantastical exaggerations but usually have a foundation of truth.

BUZURGUMNĪR b. SĀHĀVĀYAN of Marw, the famous Visier of the Sāsānian King Anshāsrwan to whom legend ascribes numerous pithy sayings. Cf. Nöldeke, *Geschichte der Perser und Araber* & c. p. 251 note; Tāh in the *Grundriss der arabischen Philologie*, II, 346.

BUZURGUMNID, KĪZĪ, second Grand Master of the Assassins or Isma'īlīs of Persia, born in Kūshār, was after his admission to the sect entrusted by Ḥasan Sabḥ with the task of capturing the fortress of Lemaer, he took it by surprise in the night of 20th 1190 Ḥ. 495 (= 5th Sept. 1102) and held it there for 3 years. In Safar 511 (June 1117) he was besieged by the Atabeg Nūshūgīn Shāhraz,

general of the Seljuk Sultan Muhammad. When Hassan Salihid fell sick in Radd II 313 = May-June 1124, he summoned Buzurgumish to him and proclaimed him his successor, and after Hassan's death on the 26th of the same month = 23rd June he was succeeded by Buzurgumish. After ruling for 14 years in Alkhul, on the same principles as his predecessor he died on the 20th Jumadh I 332 = 12th March 1138, leaving the post of Grand-Master to his son Muhammad.

BYZANTINE EMPIRE. [See ROM.]

C.

(See also K.)

CADIZ (rarely also in an older form *Cádiz*), written *Cadix* in French, Portuguese and German, but pronounced *Cádiz*, *Cadice* (whence *Cadizian*, Spanish *Cadizano*, German *Cadixen*) is at the present day the capital of the province of the same name, the most southern of Spain, with 70,000 inhabitants, lying on the bay and Gulf of Cádiz on the Atlantic Ocean northwest of the straits of Gibraltar. It was founded about 1100 B. C. by Phoenicians from Sidon as a depot for the tin which was brought from the Cassiterides (Britains) and the silver of Tarebilah, *Tarvraile*, *Tarvraile* not far from the mouth of the Baetis (Guadaluquivir) in the land of the Tartessians (Tartessus), on the rocky northwestern promontory of the island of Euxine or Cádiz, which is now called Isla de León. In Phoenician the town was called *Gad(ā)ir*, (*Ḥ*)*Aggadi* *גַּדְאִיר* (cf. the Hebrew *גַּד* and *גַּדְאִיר* = *twice wall*, *double wall*, septimentum, a walled place in a state of defence, a fortress (cf. the Arabic) from which the Greek name *Cádiz*, the Roman (*Cadix*) *Cadix*, the Arab *Ḥadix*, which latter is naturally the original of the Spanish *Cádiz* (as an appellative, the Arabic *ḥadix* passed also into Libyan Berber, *ḥadix*, *ḥadix*, *ḥadix* = wall, steep rock, *ḥadix*, *ḥadix* and has given the modern place-names like Agadir.)

About 300 B. C. the Phoenician *Cádiz* was occupied by the Carthaginians and became the centre of operations for the Punic conquest of the south of the Peninsula, just as at a later period Hamilcar, Hasdrubal and Hannibal equipped their fleets and armies in this rich commercial centre, the Punic emporium of the west; a similar use was made of it by the Scipios in the second Punic war when *Cádiz* had succumbed to Rome in 206 B.C. of commercial jealousy of Carthage, Greek scholars like the sailor Pytheas in the 4th or 5th century B.C., the Great Artemidoros in the second and Ptolemaios in the first century B.C., who remarked the phenomenon of tides which they had been practically unacquainted with in the Mediterranean (there is a difference of 6-10 feet between ebb and flow), frequently visited the town in which many Greeks resided. The flourishing trade and period of great prosperity of *Cádiz* lasted throughout the ancient period. On the other hand the Gothic period and the Arab middle ages mark a period of great decline in which the fortunes of the town reached a very low level (cf. Alexandria and Carthage); the town and its commerce continued in a state

of stagnation; in 844 it was plundered by the Normans and in 859 the fleet of the Emir Muhammad turned aside their attack. So far had the town fallen from its position as a world centre of commerce that Alfonso X the Wise after capturing it on the 14th September 1262 had to repopulate *Cádiz* again, till at a later period on the discovery of America a new era of prosperity dawned when it became the port of arrival for the silver fleets from the west; in this period it was able to defy the attacks of the Barbary Corsairs in 1530, 1553 and 1574, but it suffered severely when it was plundered in 1587 by Drake and again in 1596 by the King of Spain.

Cádiz is, it is true, occasionally mentioned by the Arab geographers but in comparison with Seville and Cordoba its role is of no importance and its competition with Tarifa, Algeiras, Málaga, Almeria and Cuenca, which it fell into the background. While the Arab authors give at best scanty details of the ancient fortified port of *Cádiz*, they are never weary of giving valuable accounts of the famous "Pillars of Hercules" near *Cádiz*, *ḥadix Ḥirakl* or briefly *al-Ḥirakl* (also *al-Ḥirakl* *ḥadix Ḥirakl* in *Ḥadix*, *Ḥadix*, p. 69), so often mentioned but never described in the classical; they mention seven of these pillars in the west, of which the most famous was the *Sinon Ḥadix*, also called *ḥadix Ḥadix* at Cape Trafalgar (*ḥadix ḥadix* [Makkar, i. 83, 91; not to be confused, as Heineken does — Abu 'l-Fida, ii. 269, — with the once very famous temple of the Phoenician *Ḥadix* = Melkart, containing an idol, in the northeast of *Cádiz*) It is described as a branch statue of a giant with a long club (according to others, a key) in his hand, on the top of a triangular pedestal resting on two square tapering blocks of marble; it was destroyed by 'Abu 'l-Muḥsin al-Mahmud in 1145; for further details of these Pillars of Hercules, see *Ḥadix*, *Ḥadix* 2, ii. 301-314, Appendix No. xxxv, p. lxxix-xvii, and *ḥadix ḥadix* (p. 10, however *ḥadix ḥadix* or *ḥadix ḥadix*).

It is the real instead of *ḥadix ḥadix* in *Ḥadix*, iv. 8, 20. The district around *Cádiz* was therefore called *ḥadix ḥadix*. It would have been very useful, if Heron. Theroch had included the Arab accounts and descriptions of the *Sinon* or *Ḥadix Ḥadix* in his great work on the Phoenice of Alexandria. An indirect proof of the insignificance of *Cádiz* under Arab domination is that it is never mentioned in Simoni's *monumen-*

and *Al-Bihar de los Morabitos*. Following the Arab fashion, the Spaniards compare Cadix to a 'silver shell' (*concha de plata*).

Schröder, *Die phänetische Sprache*, p. 80 (130, 162, 181); Dozy, *Histoire des Musulmans d'Espagne*, IV, 209. "La tour de Cadix, c'est-à-dire les colonnes d'Hercule". (C. F. Seybold.)

CAGHANIYÂN, written *Qaghaniyan* by the Arabs, a district on the upper course of the Oxus; the capital of the district bore the same name, whence the *qizil* *Qaghaniyan* and *Qaghani*, the name of the river *Qaghanih* (the modern Surkhan), which flows through *Qaghaniyân*, and the title *Qaghani-Khuda* of the ruler of the land and of course derived from the same root. On the geography, cf. the article *Kul-Khaurâ*, p. 339. The capital *Qaghaniyân* was four days' journey or 24 *farasâh* from Tirmidh and three days' journey from Kowdâshân (the modern Kalakâsh). The town has been identified by Barthold (*Turkistan in speech* *usuphiyâs qaghaniyân*, II, 74) with the modern capital of the same district, Dinnaw (properly *Dinnaw* = 'New Village') and by Le Strange, (*The Lands of the Eastern Caliphate*, p. 440) with the town of Sâir Adiy somewhat farther to the north; in support of the former view we may now adduce the words of the historian Mahmud b. Wâsi (10th century): *Qaghaniyân al-imâm bihâshih min wâshihîn* etc. (*Cont. Ind. Off.* N° 575, l. 77).

As was the case in the other mountain lands on the left and right banks of the upper course of the Oxus, *Qaghaniyân* also was influenced in its cultural development by Balhî than *Khaghân* and *Samarqand*. Immediately before the Arab conquest, the religion was *Manichæism* as the Chinese pilgrim Hsuan-tsang (c. 630 A. D.) tells us; there were then about 500 monasteries in *Qaghaniyân* although the number of monks was not large. Like most of the rulers of these lands, the "King" (*sawâb*) of *Qaghaniyân* also had to submit in 80 = 705 to the Governor, Katalân b. Muslim. (Fahst, p. 1120, 3 ll. 14.) In the year 119 = 727 the "Qaghân-Khuda" is mentioned as the ally of the Arabs. The district on the lower course of the Surkhan with Tirmidh and Caruungat a day's journey or 6 *farasâh* above it, did not belong to *Qaghaniyân* but was ruled by a separate prince, the Tirmidh-Shah (the *Khurâshah*, cf. de Goeje, p. 39 at the foot). In later times also Tirmidh and the country attached to it was usually politically independent of *Qaghaniyân*; in the 10th (10th) century however, in the Samanid period, this one as well as the districts of *Shamân* and *Khurân* to the east of *Qaghaniyân* was subject to the Emirs of *Qaghaniyân* (Gardiz in Barthold, *Turkistan* etc., I, 9 at 107).

Whether this dynasty, called *al-Muhamidi*, by Ibn Hawkal (cf. de Goeje, p. 401, 1.) was descended from the *Qaghân-Khuda* or some Arab Emir, is not known. The most famous prince of this house was *Almanû* (Ahn 'Ahi) b. Ahi Bakr Muhammed, cf. this article, p. 186.

The town of *Qaghaniyân* was then larger than Tirmidh but could not compare in numbers or wealth at its population with the commercial city on the Oxus (*Khakhan*, cf. de Goeje, p. 298). On the market place stood the chief mosque with pillars of iron but without arches (*bihâshih*, *Makshûsh*, p. 183, 1.). As late as the 10th (10th) century, in the period of Samânid, the mosque of *Qaghaniyân* was a "beautiful and famous" building (*bihâshih* *wasfâh*). The number of villages in *Qaghaniyân* was estimated by Mahmud b. Wâsi; of towns on the road to Tirmidh there are also mentioned *Barrang* (5 *farasâh* from *Qaghaniyân*) and *Uhrang* (7 *farasâh* farther on, only inhabited by weavers); *Caruungat*, 6 *farasâh* from *Barrang*, already belonged to Tirmidh.

Little is known of the later history of *Qaghaniyân* in the last half of the 10th (10th) century, the princes of *Qaghaniyân* are recognized the successors of the *Qaghaniyân*; in Sultan Mahmud's winter campaign, cf. the article *Uhrang*, p. 299. After Balhî had been finally ceded to the Saljuqs by the treaty of peace in 451 (1059), the lands on the other side of the Oxus also submitted to the new conquerors; a rebellion which broke out in *Qaghaniyân* and *Khurân* was put down in 456 (1064) by Sultan Alp-Arslân. In the 11th (11th) century *Qaghaniyân* is sometimes called a *princely* of the Ghilâs of Samarqand (Muhammad al-Khatî al-Samarqandî in Barthold, *Turkistan* etc., I, 72), and sometimes regarded as a part of the Ghilâs kingdom of *Khurân* (cf. v., p. 143).

In the accounts of the Mongol campaign in conquest, *Qaghaniyân* is never mentioned; the 13th later appears as a possession of one of *Qaghaniyân*'s grandsons and his descendants (see *Uhrang*, p. 294). The valley of the Surkhan was much valued not only by the Mongols but by other nomadic peoples also on account of its grazing-grounds; at the present day the original Iranian population has been completely displaced by the Uzbeks. The pre-Islamic and medieval towns here have long since disappeared; even their ruins do not appear to have survived; in the accounts of modern travellers only an old *khâsh* bridge is mentioned over the *Band-i Khâsh* (which is now only filled with water in the spring time) not far from its confluence with the Surkhan; the site of the town of *Barrang* was probably here. The town of *Qaghaniyân* had probably disappeared by the 10th (10th) century; the earliest mention of *Uhrang* now is in the *Zafar-Nâmâ* of Sharaf al-Din Yâsi (Indian edition, I, 124); rather however (*Zafar-Nâmâ*, ed. Deccolign, see Index) still gives the name *Qaghaniyân* to the district and its capital *Uhrang* this is probably only under the influence of literary tradition.

(W. HARTMANN.)

CAGHÂN-RUD, a tributary of the Oxus, now called Surkhan. The name (apparently of pre-Muhammedan origin, cf. *Qaghaniyân*) is mentioned in the *Khudâ-Nâmâ* (Cont. *Turkistan*, p. 40 at 109) written in the year 372 = 982—983, and was still in use in the 10th (10th) century (*Zafar-Nâmâ*, Indian edition, I, 106).

(W. HARTMANN.)

CAGHATAI-KHÂN, a Mongol prince, second son of 'Ingile-Khân and his queen *Bûrta-Erdûn*. Even in his father's lifetime he was regarded as having the best knowledge of the *Yâsi* (the tribal laws of the Mongols which had

been confirmed by Caghai-Khân) and being the greatest authority on all questions of law and custom. Like his brothers, he took part in his father's campaigns against Chien (1211-1216) and against the kingdom of the Khwarizm-Shah (1219-1224). The capital of the Khwarizm-Shah, Gurgandj (the modern Konye-Urgendj) was besieged by the three princes, Djaghi, Caghai and Ugedei and taken in Rabi' 618 = 27th March-24th April 1221. In the same year Caghai's eldest son Mubigen was slain before Bamian (see above, p. 644). After the battle on the Indus (according to Nasawi, ed. Houdas, p. 83 on Wednesday the 9th Shawwal 618, probably the 24th November 1221), Caghai was entrusted with the operations against the Khwarizm-Shah, Djaghai al-Din, so that he spent the winter of 1221-1222 in India. When Cingis-Khân undertook his last campaign (against Tangut 1225-1227), Caghai remained in Mongolia in command of the troops left behind there.

After his father's death Caghai no longer took an active part in the campaigns. As the surviving son of the late ruler (his brother Djaghai also had died before his father) he enjoyed enormous prestige. In the year 1229 he presided with his uncle Ugedei at the meeting of princes which elected Ugedei Great Khân; owing to his position as the recognised authority on law in the whole kingdom, he exercised an influence to which even the Great Khân Ugedei had to bow. He seems to have spent this period partly in Mongolia at his brother's court, partly in the territory allotted to him by Cingis-Khân where he held his own court-camp. Like all Mongol princes, Caghai had separate camps (or/so) for winter and summer. Djawaid mentions Markwâk-It as his winter residence and Kayash at his summer quarters. Both were in the Ill valley in the western Chinese province of Shensi, of which the modern capital Kulshe lies southeast of the medieval ~~capital~~ of Alinikhi. The camp mentioned by the Chinese traveller Chang-Tsun lay to the south of the river Ill; as this traveller was here in May 1225 (cf. Preussner, *Medieval Researches from Eastern Asiatic Sources* I, 98), it is probably the summer residence he refers to. The residence of Caghai's ~~brother~~ is called Uigh-It (or Uigh-It) is perhaps the correct reading by Djawaid and others.

Caghai had received from his father all the lands from the Uighur territory in the east to Bukhara and Samarkand to the west: we must not however regard these lands as a single kingdom governed from the Ill valley and only indirectly subject to the Great Khân whose capital was in Mongolia. Everywhere, even in the Ill valley itself, the local dynasties who were there before the Mongols remained. On the relationship of these dynasties to the Mongol rulers we have no accurate information; we know equally little about what sovereign rights the court on the Ill could claim from the Great Khân and his deputies. The settled lands of Central Asia were certainly not governed in the name of Caghai but in the name of the Great Khân. In the account of the suppression of the rebellion in 1236 (1238-1239) in Bukhara (see above, p. 780) Caghai is not mentioned; the governor of Mawar' al-Nahr at this period was Mahmud Yalawâ, a Khwarizmi by birth who lived in Khondj and had been appointed by the Great Khân. Even the generals of the Mongol troops in Mawar' al-Nahr

appointed by the Great Khân. When, some afterwards, the governor Mahmud Yalawâ was abnormally deposed by Caghai, the latter was called to account by his brother and had to confess the illegality of his action; Ugedei was satisfied with this apology, and granted the land to his brother as a fief (*timar*); but the illegal position of this territory was not thereby altered. During the last years of Ugedei's reign, as well as later under Möngke, all the settled areas from the Chinese frontier to Bukhara were governed by Mas'ud Beg, the son of Mahmud Yalawâ, in name of the Great Khân.

It cannot be ascertained how far Caghai's Muhammadan minister Kayi al-Din Habash 'Amid had a share in the administration of the country along with the representatives of the Great Khân. According to Rashid al-Din this minister came from Chirchik, according to Djawal al-Khasht from Kermine, and had like many other Muhammadan dignitaries at this time made his fortune among the Mongols as a rich merchant; he was on terms of such intimacy with the Khân that each of Caghai's sons had one of Habash 'Amid's sons as a comrade. Caghai was on the whole not favourably inclined to Islam. Among the infringements of Mongol law which were rigidly punished by him, was the observance of certain prescriptions of Islam. Among the Mongols it was forbidden to slaughter an animal by cutting its throat, which is the form prescribed by the Shari'at; another law likewise frequently broken by the Muhammadans at their ablations was that which prohibited washing in running water. The cruel punishment with which Caghai visited any such transgressions has earned him hatred among all Muhammadans. At his death the poet Sa'idi 'Awar sang, "That man from fear of whom no one dared enter water is himself now drowned in the wide ocean" (of death). The Muhammadan minister did not have a great reputation for piety. It is said to have been at his instigation, that Caghai executed Shaikh Abd al-Qadir Ghazali al-Sakkaki (thereon, cf. Khondemir, *Hasht al-Siyar*, Teheran edition III, 28); we also have a poem (given in Rashid, *Turkistan u spoken mongolake wathatayn*, I, 104) by Shaikh Sali al-Din Bahharî (died 24th Rabi' al-Kadî 659 = 20th October 1261) in which reproaches are heaped on Habash 'Amid. It was probably on account of his hostility to Islam that Caghai was regarded as a friend of Christianity; according to a story given by Marco Polo, he is even said to have been baptised but this statement is nowhere corroborated.

Caghai only survived by a few months his brother Ugedei who died on the 5th Rabi' al-Kadî 639 = 11th December 1241: his death must therefore have taken place in 1242. According to the Mongol custom, his physicians (a minister of Chinese origin and Mas'ud al-Din, the physician-in-ordinary, a Muhammadan) were put to death because they had not succeeded in saving the life of their sovereign. Habash 'Amid survived Caghai many years and died in Shirân 658 (12th July-9th August 1260).

Of all the sons of Cingis-Khân, Caghai is the only one whose name remained attached to his dynasty and the kingdom founded by this dynasty. In the kingdom of the Golden Horde, the names of heathen Khâns were quite driven out by the name of the Muhammadan Ubeq-Khân. The people became known as Ubeqa and their

country as Uzbekistan; on the other hand the Turkish or Turkicised peoples in *Mā warā' al-Nahr* were still known as Caghatai as late within 14th = xvth century, although there had for long been no ruling family there descended from Caghatai. The name is still borne at the present day by the Eastern Turkic literary language which was first developed under the Timurids. (cf. the articles *TURKIC*, *TURKIC LANGUAGES*).

The Mongol kingdom known as Caghatai was really not founded till many decades after the death of the Khan from whom it took its name. *Kara Hülagü*, a son of the *Mitügen* who fell at *Bamian*, was the first to be recognised as head of the dynasty and he was deposed in favour of *Yisä-Möngke*, a son of Caghatai, by order of the Great Khan *Gyük* (1246—1251). The events of the year 1251 (cf. the article *1251-52* p. 682) utterly destroyed the importance of the house of Caghatai for a period. All the adult members of the house were either slain or banished. *Orghana*, the widow of *Kara-Hülagü*, also was deposed but died soon after, held the regency on the throne during the following decade during the minority of her son *Mutash-Shah*; but she seems to have exercised no authority over the adjoining lands. As the narrative of *Rabruquis* (1253—1255) shows, the Mongol empire at this period was practically divided into two separate portions; *Khān*, the ruler of the western half, was able to approach the Great Khan almost on terms of equality (although the coins were everywhere struck in the name of the Great Khan *Möngke*); the territory directly subject to the Great Khan began between the rivers *Takas* and *Öu*. The above mentioned *Mas'ud-Beg* who enjoyed the status of *hökü* *Shān* was governor of all the settled areas between *Bish-balkh* and *Khāmān*.

On the death of the Great Khan *Möngke* in 1259, a different condition of things arose. During the struggle for supremacy between *Khubilai* and *Arigh-Bukhā*, the brothers of the late Great Khan, *Alghu* a grandson of Caghatai agreed to take possession of Central Asia for *Arigh-Bukhā* in support of him (see there against his rival). He actually succeeded in bringing the whole of Central Asia under his sway in a brief space of time, including lands like *Khāmān* and the modern *Afghanistan* which had been previously nominally been numbered among the possessions of the house of Caghatai. He had of course no successor for himself and not for *Arigh-Bukhā*; he everywhere declared himself an independent ruler, particularly after *Arigh-Bukhā*, who tried to assert his rights, was forced finally to relinquish this territory in spite of some initial successes. *Mas'ud-Beg* was still governor of the settled areas, now no longer in name of the Great Khan however but in name of *Alghu*.

Alghu may be regarded as the founder of an independent Mongol state in Central Asia; he enjoyed his success for a brief period only, as he died in 1264 = 1265-1266; some years after his death the projects of the house of Caghatai in this district had to cede the ruling power in this state to *Kaidü*, grandson of *Gödel* (cf. the article *1264-65*, p. 795), who ruled till his death in the beginning of 1301 (autumn 1301). We again find *Mas'ud-Beg* governing the settled areas of Central Asia in name of *Kaidü*. *Mas'ud-Beg* died in *Shawwāl* 688 = October—November

1289; he was succeeded by his three sons in succession; *Abū Bakr* (ill. *Shah* 697 = May—June 1298), *Satmish-Beg* (ill. 702 = 1302-1303) and *Saymish*; the first two received their powers from *Kaidü* and the third from his successor *Capar*.

Capar was only able to assert his authority for a few years after the death of his father; he was deposed by *Durwā*, son of *Imāsh-Khān*, in 706 = 1306-1307. *Durwā* must be regarded as the real founder of the kingdom of Caghatai. The boundaries of this kingdom extending to the other Mongol kingdoms (*China*, *Peria* and the kingdom of the Golden Horde) are given on the Chinese map of the year 1331 (cf. the article *1331*, p. 789).

It was some time before this kingdom received an independent organisation of its own. *Yamāl al-Din Yumālī*'s work written in the reign of *Capar* shows that affairs in Central Asia were in much the same condition even at this period, when there had long been a strong Mongol central government in *China* and *Peria*, as they had been in the early years of the Mongol conquest. Besides the old family of governors, the earlier local dynasties had also survived even in the *U* valley itself; in the towns, where there was no local dynasty, the *qads* (the chief of the *Mahmūd* clergy) was at the head of the administrative body.

The Mongols were here apparently less under the influence of *Islam* and *Mahmūd* culture and were able to preserve their peculiar features in spite of their conquered subjects longer than in *Peria*. Except in the land of the *Uighurs*, *Islam* was everywhere the state religion by the time of the Mongol conquest, even in the *U* valley; nevertheless these areas had been but little influenced by *Arabic-Perian* culture. The Mongol conquest, as *Rabruquis* pointed out, was not so much in these lands by an extension of the pasture lands at the expense of the towns and areas under cultivation; at a later period urban life quite disappeared here under the influence of Mongol rule except in *Mā warā' al-Nahr* and the western Chinese *Turkistan*. The *Mahmūd* civilisation of *Mā warā' al-Nahr* naturally exercised some influence on the Mongols, particularly the rulers; this influence was not strong enough, however, to induce the mass of the people to change their mode of life. When the ruling family decided to settle in *Mā warā' al-Nahr* and to break off from the customs of their people, the complete repatriation of the eastern provinces was brought about.

Even the brief reign of *Yisä-Möngke* (1246—1251) appears to have been favourable to those who professed *Islam*. The minister then was a friend of the Khan's youth, a foster-son of *Yabash-Amlā*, *Bahā' al-Din Marghānī*, who was a descendant of the *Shaykh al-Islām* of *Farghāna* and proved more favourable to scholars and poets than his foster-father. He is praised by his contemporary *Yamālī*, who was personally acquainted with him, as a *Mahmūd*; his home was the centre of all scientific and literary pursuits. *Yabash-Amlā*, who was hated by the Khan as an adherent of *Kara-Hülagü*, owed his life to the intervention of *Bahā' al-Din*; nevertheless *Bahā' al-Din*, who, after the events of the year 1251, he had to share the fate of his Khan and was handed over to his foster-father, was executed

in the earliest Islam by the latter's order. Under Orghana, Khatai-Amid again took the position he had held under Caghatai; this princess was however favourably inclined to the Muhammadans; she is described by Woussif as a proto-Islam of Islam and by Hsüan-t'ang as a Muslim; she is even said to have been a Muhammadan. Her son Mubarak-Shah, who was related to the throne in 1145 was 'al-Nahr, certainly adopted Islam, as did his rival Shihab-Khan some years later. The rule of Alghu seems to have been less favourable to Muhammadanism; Sulaiman-Beg, the son of Hsüan-t'ang, attached himself to the new ruler; on the other hand, Shihab-Beg al-Din, a son of Shihab-Salt al-Din Bughara was slain at the taking of Bughara. The events of the following years put off for some decades the victory of Muhammadan culture, the way for which had been paved by the conversion of Mubarak-Shah and Shihab-Beg and Caper as well as Dawid and the other princes of the house of Caghatai remained pagans and had their dwellings in the eastern provinces. In the reign of Isma'il-Beg, the son of Dawid, the armies of the great Khan penetrated from China far into Central Asia and changed the winter and summer residences of the Khan; the writer of the continuation to Rashid al-Din's *Yusuf* alludes in his account of these happenings to the winter residence of the Khan was the district on the Jark-Kul, while his summer residence was on the Tala.

Then Baka's successor Khan Kalak (likewise a son of Dawid), who, according to the historians reigned eight years, according to his coins till 726 (1326), was the first to return to the actual lands of Mubarak 'al-Nahr. Though he did not adopt Islam he is praised by Muhammadans as a just prince; he is said to have built or restored several towns; he had a palace built for himself in the neighbourhood of the town of Nakhshab or Nakhsh, from which the town takes its modern name of Kharshi (Mongol = "palace"). He introduced the silver coin, afterwards called "Kalak", which may be regarded as the first independent coinage of the Caghatai kingdom from the Mongol conquest to his time there; but only been the coins of individual troops and dynasties in circulation in Central Asia. This fact also makes it probable that the kingdom was first united as a firm body by Kalak, although we have no definite statements on this point.

After two brief interregnums, Kalak's brother Tarmashtin was raised to the throne probably as early as 726. This Khan adopted Islam and took the name of 'Ala' al-Din; the eastern provinces were entirely neglected by him so that the nomads of these provinces rose against him as he had broken the "Yas". This rebellion appears to have taken place about 734 = 1333-1334; it is scarcely possible to detail further events, for it is quite impossible to reconcile the accounts of the historians, which are probably quite reliable on this point, and the *Shihab*'s account, which is equally tinged with romance (cf. Dehmer and Sangha, *ibid.* 39 et seq.). The statements of contemporary missionaries prove that the centre of the kingdom was again transferred for a brief period to the Ulu valley and Christians were allowed to spread their religion unimpeded and to build churches there (in the reign of Hsüan-t'ang (about 1334-1335); it is even said that a seven

year old son of the Khan was baptized with his father's consent and received the name of Johannes. Some afterwards these missionaries fell victims to a Muhammadan agitation.

Some years later Nasaf (Kharshi) is again mentioned as the residence of the Khan Karta; this Khan was slain (in 742 = 1340-1341) in battle against the Turkish military aristocracy in his lands, whereupon the rule of his house in Mubarak 'al-Nahr came to an end. Till 1370, descendants of Caghatai were placed on the throne by the Turkish Khans in nominal rule; in the time of Timur, these rulers were chosen from the family of Oguzi. Nevertheless under Timur and his successors, the nominal population of Mubarak 'al-Nahr, who, as a warrior caste, enjoyed many privileges (the Spanish *crónica* Clavijo (1403-1406) gives full details), was still as before called "Caghatai". When the Caghatai had been driven out in the 13th (14th) century by the "Uzbek", the name "Caghatai" was transferred to the Timurids who migrated to India. Up to the end of the 15th century there was a ruling house which claimed to be descended from Caghatai in the modern Chinese Turkistan (these princes were sometimes able to extend their rule as far as the lands north of the Celestial Mountains (T'ien-Shan) as well as to undertake campaigns into Mubarak 'al-Nahr, Tibet, India and Afghanistan); the subjects of these princes appear to have called themselves not Caghatai but simply Mongols (Mongol).

Bibliography: Our sources for the history of Caghatai and his successors are much scarcer than the accounts of the Mongol kingdoms in Persia and China; nor have they, as regards they are, yet been collected or edited. With the exception of Hsüan-t'ang's *Muhsin al-Jawid*, which stands quite alone (there are two manuscripts in the Asiatic Museum in St. Petersburg; in Western Europe the work has hitherto been quite unknown; extracts are given in Barthold, *Turkistan* etc. i. 128 et seq.), there are no historical works composed in Central Asia during the period of Mongol dominion. Among Persian historians, Bihārī (*Tarikh-i-Hind*), extracts in Dehmer, *Journ. Asiat.* 40 Ser. Vol. 22, 381 et seq.) and Rashid al-Din (*Yusuf al-Mubarak*), extracts in Barthold, *Turkistan*, etc. i. 123 et seq.) give fully detailed accounts of Caghatai and his immediate successors. The statements regarding the house of Caghatai given by Shihab al-Din Yusuf in the introduction (*Amshir*) to his *Zafar-nama*, are based, apart from numerous chronological inaccuracies, on a historical forgery as was shown by S. Ohanov (*Histoire des Mongols*, ii. 108 et seq.). The events after the death of Kalak (including the war between Dawid and Caper) are most fully given in the *Tarikh-i-Wayz* (Ind. edition p. 449 et seq., 315). On the Catholic missionaries, cf. *Mohammedi Hariri, Tatarica Ecclesiastica*, Helmstedt, 1741, particularly Append. N. 58, 60, 83 and 92. Valuable material on the condition of Central Asia is contained in the portion of Ibn Fadl Allah al-Umari's *Muhsin al-Jawid*, which has been made known by Quatremère's *Notes et Extraits* etc. Clavijo's account of his journey has been edited in Spanish and Russian in the *Sevskii Istoricheskiy ruzhnik*, *puti i spetsialni* *imp. Akademii Nauk*, Vol. xviii, (St. Petersburg,

This Babylon, the ancient Egyptian and Greek fortress, which was much extended by the Romans, has survived to the present day in Old Cairo under the name of *Kayr al-Sham*. The name is, according to Butler, probably an Arabised form of "Babylonus Aegypti", i. e. Babylon of Egypt. That *Sham* is a popular etymology of *Kayr al-Sham* is very likely when one considers that the high towers of the fortress were used as beacon towers. This fortress remained in a fairly good state of preservation with its strong towers and walls and served as a refuge for the Copts till after the English occupation of Egypt, but it then became very dilapidated till quite recently it was placed under state protection by Max Hara Bey, who has rescued so many Egyptian monuments from destruction. Between *Kayr al-Sham* and the Nile there now lies a great portion of Old Cairo, but at the time of the Arab conquest the Nile washed the walls of the castle. The fortress was connected by a bridge with an island, also fortified, which lay opposite it and was probably a southern continuation of the present island of Roda and formed with it a fortified barrier which commanded the bridge of boats to Fihis (Giza) and controlled all communication with the west bank of the Nile. It is still shown, this was a very strong fortress; it fell out again to the Arabs under the conqueror of Egypt for a long period. After a siege of six months Babylon fell on the 9th April 641 = 21st Rabi' II. 20 A. H.; it was not taken by storm however but surrendered peacefully. For further details see the article *CAIRO*. The name is still found attached to the cemetery of *Deir Bahiyya* south of Old Cairo. Full details and bibliography are given in Butler, *The Arab Conquest of Egypt*, p. 238 et seq. Two places *Umm Danuta* and *Shir*, are known to have existed as the result of the Arab conquest between *Ala Shams* and Babylon. *Umm Danuta* probably corresponds to the *Taukhuys* mentioned by John of Nikiu. *Amr the Conqueror* made his headquarters here for a period before the battle of *Ala Shams*. Leone Caetani approximately identifies the site of *Umm Danuta* with the modern *Rabektye*, which was then situated on the Nile. Farther to the south under the walls of Babylon, the fortress of the Romans, lay the unfortified town of *Shir*. It is not quite certain whether it lay south of the fortress — this is Butler's view — or to the north which is the conclusion come to by Gueset in the *Journal of the Royal Asiatic Society* 1907, p. 69 et seq. It certainly did not cover the whole plain; otherwise it would have been impossible for the Arabs to pitch their camp in this neighborhood. We may assume that there were individual settlements, particularly churches, monasteries, gardens and vineyards all over the plain between the Nile and *Mukattam*.

3. The Foundation of al-Fustat.

As had been the case in the past where *Kufa* and *Hira* were founded as military towns and depots for the Arab armies, far from the earlier seats of government, so in Egypt also it was not Alexandria that was chosen as the seat of the Caliph's representative, but a new town was built at Babylon, the character of which was purely military. The choice of this particular point was probably settled on as a result of the experience of the period of conquest which had proved the

great strategic importance of Babylon. Fustat did not, however, arise in a night by command of the authorities as a result of a regular system in the allotment of the quarters (*khayats*), but the camp of the army, pitched in quite an aimless fashion at the edge of Babylon, assumed permanent form. The executive patriotism of the Egyptian historians has given us a wealth of information on the first foundations of Fustat, which has enabled Gueset (*op. cit.*) to give a clear picture of this Egyptian military town save for one or two uncertain points. The new town lay along the Nile for about three miles with a breadth of about half a mile, from *al-Nin*, which bears the same name at the present day and the now dry *Birket al-Fahagh* to the south almost to the top of the *Ishel* *Yashkur* on which the *Tillid* Mosque was afterwards built. In a fairly central position to the north-north-east of Babylon was the residential quarter of the governor 'Amr b. al-'As, a clue to the situation of which is given by the Mosque of 'Amr, to which additions have of course often been made but the older portions of which date back to the period of the Conquest. This quarter bore the name of *Khayyat al-Fustat* i. e. "Quarter of the People of the Standards"; the explanation of the name is, that a number of comrades-in-arms, particularly *Aqaba* and *Muhadjar*, who formed the nucleus of the army and belonged to the oldest branch of the troops of Islam, had assembled here around the standard of the commander-in-chief. The various other groups of the people attached themselves to them to form tribes, as it were. There was a *khayya* corresponding to each of these tribes and a payroll in the *khayya* for each *khayya*. This ethnic principle of division was only broken among the *Khayyat al-Fustat*. These had a tribal roll to themselves although they really belonged to different tribes. Another association of members of various tribes called *al-Saifa*, organized for a special purpose, also had a separate *khayya*, but its members went with their own tribes on the payroll. Members of the various tribes arriving at a later date settled in the *khayya* of their own tribe: what they could not find room with their kinsmen, which often happened, these stragglers were collected as *Khayyat al-Fustat* in a separate quarter outside. Tradition says that members of the tribes of *Tudila*, *Ghassan*, *Khawlan* and *Ma'ala* were appointed to superintend the staking out of the *khayyas*. These must therefore have been the most strongly represented; they are all tribes from the Yaman. The North Arabian element was not strongly represented at the foundation of Fustat. It is difficult to get a clear idea of the *khayyas*, as the word is applied both to fairly large tribal quarters and to their internal subdivisions. There were open spaces (*suyuf*) between the individual *khayyas*, of which in course of time only narrow streets came to be left. It is clear from the history of its origin, why Fustat was not laid down on a definite town-plan; it simply developed out of the union of a number of straggling tribal encampments and ran from north to south outside the fortress of Babylon and the main quarter with the great Mosque lying to the north of the latter. It is not quite clear, how far the town of *Shir* was incorporated from the first. An important part of the camp, which was gradually joined up to form a town, was the

bank of the Nile north of Babylon as far as the northern boundary of the town at that period. It was called al-*Hamra waṭi* and was divided into al-*Hamra al-Khura* (near Babylon), al-*Wust* and al-*Khura*. This district is mentioned in a Greek papyrus of the end of the first century (Bell, *Catalogue of the Greek Papyri in the British Museum*, Vol. IV, p. 332). At this period there must have been a distinction between Babylon and Fustat, which was official rather than geographical. The name Fustat drove out the older Babylon. The ancient name *Misr* or *Majr* remained in existence alongside of Fustat. According to the dictionaries, Fustat means tent. The name of the town is given in very different forms, viz. — *Fustat*, *Fustat*, *Fustat*, *Fustat*, but the common appellation also has various forms. Dory, *Supplement*, s. v. recognised that in *Fustat* we have an Arabised form of a foreign word, the Byzantine *castrum* i. e. *castrum* "camp". The Papyri give evidence of the use of *castrum* as a name for Fustat. It can no longer be determined, what historical connection there is between the name of the town and its original meaning. At any rate the city of the army was not at first surrounded by walls and ditches but only by a *Zarḥ* (Old Arabic *Zarḥ*), a barricade of thorn-bushes. The ancient name *Misr* is now combined with Fustat to form a single name: *Misr al-Fustat*, *Misr* or *Majr*, a place-name, which the Arabs found when they came there, was regarded by them as identical with *Misr*, *Majr*, camp, and also with the Arabic name for Egypt, which had been in use even in pre-Muhammadan times. *Misr* was popularly pronounced *Majr* and this name was transferred from *Misr al-Fustat* to the younger sister town of *Majr al-Khira* and has remained its usual name to the present day.

3. History of the Town of al-Fustat.

The camp gradually developed into an important town by incorporating the towns of *Misr* and Babylon, which dated from pre-Muhammadan times. The town however remained unfortified, as is evident from the statement that in the year 64 (683) the governor of Iḥa al-Zabair had a ditch dug to protect the town from Marwan I's Umayyads who were advancing on it from Syria. We can hardly imagine how primitive the houses of the Arabs were. Even the original Mosque — there were also places of prayer to the individual *khāṭa* and besides a Masjid outside in the desert for the appointed services at the two great festivals — was naturally a very simple building, though it was increased and embellished in course of time (cf. Schwally, *Zur älteren Baugeschichte des Moschee des 'Amr in Ab-Kairo in Straßburger Festschrift zur XLVI. Versammlung deutscher Philologen 1901*). Other public buildings were also erected in time. At the end of the first century we hear of great granaries being built (Bell, *Aphrodite Papyrus*, p. 52) and of the erection of an *akḥa* for the *Amir al-Ma'mūn* (ibid. p. xviii) — it is probably offices for the governor that are meant. Some years later a treasury (*ḥaz al-māl*) was built in Fustat (Becker, *Beiträge zur Geschichte Ägyptens*, II, 162). There are only casual notices which testify to the continual growth of the town. Its development probably dates from the second half of the first century, as under 'Abd al-Malik's brother, 'Abd al-'Azīz, it was not Fustat but Helwan, which was

the governor's residence. Although the central part of the town thus expanded, the whole area of the original *khāṭa* did not remain built upon; for example, the northern quarters, al-*Ḥamra al-Khura*, and the district of *Qleḥl* *Yashkar* fell into ruins and became a desert. (Makrizi, *Khayr*, I, 304, 35). When on the fall of the Umayyads (750) the 'Abbasid troops entered Egypt to follow up Marwan II, Marwan burnt the whole of Fustat except the great mosque; at least so we are informed by a Christian source, Severus of Ashmūnain, ed. Ercus (*Patrol. Oriental*, Tome V., fasc. 1, p. 168). This may possibly be the reason why the 'Abbasid governors no longer resided in the ancient Fustat but built a new residence, *Ḍar al-'Imra*, in the above mentioned old quarter al-*Ḥamra al-Khura* to the north, around which a new quarter arose which was called al-'Aṣkar. The topography of the whole of this district has been particularly studied by C. Salomon (see Bibliography). A second Chief Mosque (*Khayr*) was attached to the *Ḍar al-'Imra* here, which was at first called *Ḍiyāf al-'Aṣkar* and later *Ḍiyāf Ṣāḥib al-Ḥalla*. Large buildings and markets also came to be erected here and al-'Aṣkar became united with Fustat to form one town. This quarter also had a police station (*Sikra*) of its own, the so-called al-*Sikra al-'Uṣṣ*.

This notice by Makrizi (*Khayr* I, 304, 35) is of importance, as it enables one to see that the division of the town into two parts, *'Amal al-Faṣṣ* and *'Amal al-Faṣṣ*, which existed throughout the whole period of Fustat's prosperity, dates back to the foundation of al-'Aṣkar, i. e. to the year 133 (750). Makrizi (ed. de Goeje, p. 199) gives the clearest account of this division of the town. According to him, the Mosque of 'Amr was distinguished as the *al-Ḍiyāf al-Suffat* and the Tulunid Mosque (see below) as *al-Ḍiyāf al-'Uṣṣ*. The boundary between the two divisions was formed by the *Masjid al-'Aṣṣ*, the site of which can no longer be located — a clue is given in *Khayr*, I, 331, —. This statement would lead one to regard the southern part of the town as *'Amal al-Faṣṣ* and the northern as *'Amal al-Faṣṣ*, but this is not correct. Makrizi (*Khayr*, I, 5, 21 ed. Wiet, I, 12, Note 2 and I, 199, 1) tells us of *'Amal al-Faṣṣ* that it had two ends (*ḥarṭat*) and that, beginning to the south of *Ḥayr al-Shayn*, it stretched via al-Rawḍ and the *Ḥarta* as far as al-'Aṣkar and the Tulunid town. It thus enclosed in a semi-circle the division *'Amal al-Faṣṣ*, which formed the older portion of Fustat. In these circumstances it is confusing to be told that *'Amal al-Faṣṣ* adjoined Cairo (*Khayr*, I, 299, 1). This statement was probably made while the author was thinking of later conditions after the decline of al-'Aṣkar, or perhaps *'Amal al-Faṣṣ* stretched eastwards of al-'Aṣkar along the Nile. In any case *Faṣṣ* and *Faṣṣ* are here not identical with the boundary between Upper and Lower Egypt, but *Faṣṣ* rather refers to the low-lying bank of the Nile, while *Faṣṣ* refers to the higher land farther from the river. This is quite clear from *Khayr*, I, 343, 1. There was a police-station (*Sikra*) corresponding to each of the administrative districts (*'Amal*) which was called *Sikra al-Faṣṣ* (Ibn Naḍī, ed. Voller, 52, 1) and *Faṣṣ* or, as above mentioned, *al-'Uṣṣ* in each separately. In times of unrest the merchants used to retire

from *'Amr al-Fay* into *'Amr al-Fay*, i. e. into the interior of the town. (Mussabih *al-Hekkar*, *Beit al-Fay*, i. 70, 71.) That the ancient Fay¹ remained the real centre of the town even after its burning by Mursu down to the late Fatimid period, is evident from all accounts.

Al-'Askar, on the other hand, was the residence of the Abbassid governor till a new period in the history of Egypt began in 254 (868) with Ahmad b. Tulun, and a transference of the seat of government and of the town became necessary with the new requirements of the court and the military. The site, where this new town was to survive its founders, arose, it will be seen by the Tulunid Mosque, which is situated in this great complex of buildings to which the name al-Kay² was given. As further landmarks, Mubrit (*al-Hekkar*, i. 313, or *al-Fay*) gives the citadel, the Romani square, and Zain al-'Abidin, which, according to the map published by Giesse and Richmond in the *Journal of the Royal Asiatic Society* 1903 (p. 791 et seq.), is to be sought for in the south-east of the Tulunid Mosque. Al-Kay² was therefore to the east of al-'Askar. This new town is said to have been a square mile in area (the *hawza*) and to have taken its name al-Kay² (sing. *Kay²*) from the fact, that the ground adjoining the royal palace was divided into separate allotments (*Kay²*) and granted for their requirements to the troops and officials of the palace. They were organised partly on a territorial basis and partly according to their occupations. This great expense of buildings surrounded the great Mosque, a large racetrack (*al-Bayt*) for polo, and other buildings required by a royal residence. It has hitherto been difficult to form a picture of this royal town, but the results of the excavations by Sarre and Hensfeld in Samarra may clear up our difficulties in a surprising fashion. That B. Tulun, who had risen to power in Samarra, built his palace in the style of the caliph's palace in a *præterit* probable. Ahmad also laid down new buildings in al-'Askar; his hospital (*al-Hakimiyah*), the first of its kind in Egypt, was built in this quarter of the city. His son and successor Khawwar took down a part of his father's buildings to erect them in a still more splendid fashion. The descriptions of the splendour of his palace, gardens, the pond of quicksilver and his menagerie sound like fairy-tales. The Tulunid period is one of the most splendid in the history of Fay¹. When the dynasty fell in 969 (964) and the Abbassid general Muhammad b. Sulaiman entered Fay¹, he had the splendid palace of the rebel Tulunids razed to the ground, and although al-Kay² survived, it suffered severely as did Fay¹ itself, the mosque alone remaining unharmed. It may be mentioned, that at first both al-'Askar and al-Kay² were regarded not as quarters of the city but as enclosed groups of buildings outside Fay¹ (*al-Hekkar*, i. 304, 305).

After the destruction of the Tulunid palace the governor's residence was again moved to the *Dir al-Fay* of al-'Askar, in which the *Imam al-Fay* had been under the Tulunids. The name al-'Askar, however, had fallen out of use even in the Tulunid period and people spoke of the "city of Fay¹ and al-Kay²" (*al-Hekkar*, i. 305, 7), the name al-'Askar was only occasionally used, although at first it had been regarded as a

separate town. It is evident then, that this whole area must have been very much built over during the Tulunid period.

The prosperity of Fay¹, now increased by the incorporation of al-'Askar and al-Kay², lasted for several centuries more. Even the foundation of the Fatimid city of Cairo did not affect it; indeed one rather gathers from the accounts of the travellers, who visited Egypt while the Fatimid dynasty was at the height of its glory, that the splendour and particularly the commercial activity of Fay¹ far surpassed those of Cairo. Muhammad, for example, writing in the year 395 (985), describes Fay¹ and its wealth in great detail, while he dismisses Cairo in a few words. He was particularly impressed by its huge population: 10,000 prayed behind the Imam on Fridays. The main centre of business activity was around the Mosque of 'Amr (*al-Fay* *al-Kay²*). He saw houses of four and five stories; in one alone 200 men had their dwelling. Fay¹ was to him the most splendid and most populous city of the Muhammadan world, yet being as cheap in it as the necessities of life were constantly being imported from all parts of the world. It must of course be admitted that the pious traveller was not blind to the dark side of the picture of this busy city. About 60 years later (439 = 1046), the Persian traveller Nizari Khawwar gives a similar account of the city. To him also the richest market in the world was the *Suq al-Kay²* near the Mosque of 'Amr. He also praises the lofty houses and tells us of the artificial gardens, which were laid out on the roofs on the top of the seventh story. He also, on the other hand, mentions narrow streets which were overshadowed by buildings and had to be lighted artificially all day long. He describes the rare and costly wares, which were sold in Fay¹, and describes the industries of the city. He praises the peace and security of the city and the authority of the government. Of topographical interest are his statements, that Fay¹ looked like a high mountain from a distance and that the Tulunid Mosque lay on its edge. The note on the high situation of Fay¹ no doubt refers to the suburbs in *'Amr al-Fay*; for even by this time, the low lying position of *'Amr al-Fay* had provoked the criticism of contemporary hygienists (the *Rayhan* in *al-Hekkar*, i. 339).

Nizari Khawwar saw Fay¹ as late as the reign of the Caliph Mustansir, but the Fatimid kingdom was still at its zenith. In the second half of the long reign of this prince, it suddenly began to decline. Famine and mutinies among the soldiers destroyed the prosperity of the dynasty and were disastrous to a city like Fay¹, which lived by peaceful commerce. The northern parts of Fay¹ suffered most, the Tulunid city and the ancient 'Askar, which were absorbed by its inhabitants and fell into ruin. These districts were found useful at the restoration under Badr al-Jaysh, when all movable parts of its buildings (*al-Fay*) were carried off to be used in the extension of Cairo. It therefore became necessary at a later period to build walls to conceal this decayed remnant of ruins from the view of the Caliph, when he rode to Fay¹ from Cairo. In the Caliphate of Amir (495-524 = 1101-1130) the Viceroy al-Mu'izz al-Jaysh proclaimed in Cairo and Fay¹, that whoever possessed a house in ruins,

should repair it and live in it or make it available by selling or letting it; whoever did not do this, was to forfeit all claim to his property. But even these measures only served to promote an extension of the new quarter, adjoining Cairo on the south-east between the Ramla and the Bab al-Zuwaiti of Cairo. Of al-Karafa and al-Askar there only remained the division of Djabal Vashkur with the Fuldin Mosque, but the latter was in a hopeless state of neglect; it was even used as a camping-place for Maghribis passing through on pilgrimage, until, in the sixth (xiiith) century, it was restored by the Mamalik Sultan. Fustat in the larger sense received the final blow, when the Crusaders came to Egypt in the reign of the Fatimid 'Alid. Cairo was now fortified but Fustat quite defenceless. The Visier Shawar was afraid the Christians might occupy Fustat and use it as a base for their military operations. He therefore ordered it to be set on fire on the 19th Safar 364 = 22nd November 1168. Over 20,000 vessels of raphia were distributed throughout the city and the fire lasted 34 days. Even this conflagration, however, appears to have spared certain areas and it was not till the reign of the Mamalik Bahars that these were destroyed and what was valuable of their remains used for a new foundation near the Mosque of 'Amr on the Nile.

According to the usual view, the famine under Muntashir and the fire under Shawar entirely destroyed Fustat. It was certainly so this time, but the great mound of rubbish (*Arwa, A'wila*) arose which still stretches between Cairo and Old Cairo. By the creation of this expanse of raised buildings, the northernly division of Fustat, the modern citadel, the Fuldin Mosque and the lands adjoining it on the west, became separated from the main part of the city, which lay around the Mosque of 'Amr. The space, separating these portions of the town from Cairo, which lay somewhat farther north, was less than the distance between them and the quarter around the 'Amr Mosque which stretched round to the south. It was therefore natural, that, with the transference of the mass of the population to Cairo, the remains of the Fuldin city gradually developed till it became incorporated in Cairo. The beginnings of this process have already been indicated above.

The great city of Fustat, which had stretched from the Bab al-Jabash to the citadel and to the Nile in the west, was now a thing of the past. Though Fustat once practically adjoined Cairo, at the end of the Ayyubid period it was estimated by Ibn Sa'id, that the distance between the two towns was two miles. A dusty road led through the mounds of ruins from the Bab Zuwaiti to the quarter around the Mosque of 'Amr, which soon made a remarkable recovery after the conflagration. Shirkah brought back the inhabitants of the burnt city and Saladin restored the Mosque of 'Amr in a splendid fashion. Though plague and scarcity destroyed the gradually increasing prosperity of the town in 565 (1169), between 577 (1180) and 647 (1249), i.e. in the reign of the Ayyubid Sultans, Ibn Sa'id gives an account of Fustat, which, though naturally in striking contrast to the glowing descriptions of Mukaddasi and Nasir-i-Husraw, gives a good idea of the commercial prosperity of Fustat (*Adifat*, I, 341 et seq.). It is true, that the town had a dismal aspect, the city gates

and many of the houses were in ruin, the streets narrow and dirty, the mosque neglected and used as a short-cut, but not even this far-travelled man had seen any thing like the array of ships and merchandise, which he saw on the Nile-bank. The sugar and soap industries still flourished as in ancient times. Of great importance is his statement, that Fustat was still as in former days the seat of commerce and industry and that goods were landed here and then forwarded to Cairo. Cairo, the brilliant modern city, was essentially a military town in origin. Fustat's prosperity in Ibn Sa'id's time may be partly to be traced to the revival in the prosperity of the island of Roda at this period, of which we shall presently speak.

Soon afterwards troublous times again fell upon Fustat. Mahdal mentions the years 696 (1296), 749 (1348), 776 (1374), 776 (1374) and 790 (1388), as being particularly disastrous. But many other changes were brought about by the Mamaliks in the once so brilliant city of Fustat. Under them it became the administrative capital of Upper Egypt, while Cairo held the same position for Lower Egypt. This arrangement is most especially stated in the *Imshak*'s work. The *Kadi* and *Muhtasib* in Cairo had authority in the Delta also, while the corresponding officers in Fustat were supreme in Upper Egypt.

Little is known of the further vicissitudes of the town. With the gradual preponderance of Cairo, which ultimately became the chief commercial centre also, Fustat gradually declined. Whether it has further decreased since the Mamluk period appears doubtful, but the relative difference between it and Cairo has naturally been constantly increasing. Indeed, the very name Fustat ultimately disappeared, while the popular name *Masr* for Fustat as well as for Cairo remained in use. Cairo gradually became so important in comparison with Fustat, that the latter became designated in European literature as Old Cairo. Even the scholars with the French expedition talk of "le vieux Kairo" as an established term and quote earlier travellers as authority for its use. The Arabic expression at the end of the twelfth century was *Bayr al-Arifa*, while the modern *Dictionnaire Géographique* of *Boisguy* gives *Masr al-Kadima*. At the time of the French expedition Old Cairo had about 10,000 inhabitants, of whom 500 were Copts who had survived here for centuries beside their ancient churches and monasteries. The French scholars also again emphasize, as did Ibn Sa'id long before, the importance of the harbour, particularly for trade with Upper Egypt. In the eleventh century with the general improvement in the country, the population of Old Cairo has also increased. According to the census of 1897, the town had 31,849 inhabitants. It forms a district in the government of Cairo. At the present day, Old Cairo is a long narrow strip, lying along the Nile and its northern limits adjoin the southwest end of Cairo proper.

Between Old Cairo and the Mokattam there have lain, since the Fatimid period, the mounds of ruins, which form such a characteristic feature of the town, behind which the so-called tombs of the Mamaliks and the "City of the Dead" lie along the Mokattam. This "City of the Dead," the beginnings of which date back to the period of the Conquest, is called al-Karafa, in the

middle ages it was separated from Fustat by a wall. A larger and smaller *Kasāba* (al-Kutub and al-Sughūr) were distinguished, which stretched from north to south parallel to the Mulsān and the city. Al-Kasāba al-Sughūr lay nearer the hill and corresponds to the modern City of the Dead which stretches as far as the Mausoleum of the Imam al-Shāfiʿi. On the two *Kasābas*, their history, tombs and sanctuaries, a monograph was written in 804 (1401) by Ibn al-Zaylī entitled *al-Kasāba al-Sughūr fī Tarīkh al-Bayt al-Sughūr wa 'l-Kasāba al-Kubrā wa 'l-Sughūr* (printed Cairo 1225 = 1907).

4. The Nile-Bank, the island of Rōḍa and Dīsa (Gizeh).

The task of clearing up the historical topography of Cairo and the neighbourhood is very much complicated by the fact that the Nile has several times changed its bed since the conquest. At that time, as we have seen, its waters washed the *Kasr al-Shām* and the Mosque of 'Amr, but only a few decades later it had retreated so far back that there was sufficient land left dry between the castle and the new bank to be worth utilizing. 'Abd al-'Azīz b. Marwān erected buildings here. The struggle with the Nile goes on through the whole medieval period in the history of Cairo. Any method of controlling the river were at this time quite unknown to the Muslims and their amateurish efforts in this direction had at most but a very temporary success. The Nile then flowed, as has been stated, much further east than at the present day and must also have taken a considerable turn to the east in the north of Fustat so that great areas of the modern Cairo were then portions of the river-bed. The name al-Kabūh (*Kū'a*: *al-Kabūh*) is given to that quarter of the town near the Tilmān Mosque. This Kabūh lay immediately to the west of the Jibāl Yaḥyā and was a favourite resort as it lay on the Nile. At the present day it is more than $\frac{1}{2}$ mile distant from the river; and this is a good deal in the plan of a town. The many dried up pools (*ḥiḥ*) within the modern city also remind one of the gradual shifting to the west of the Nile. First of all, islands arose in the river-bed, then the water-courses which separated them from the banks were cut off from the main-bed; these were only filled with water at periods of flood, then they became *birkas*, till they finally dried up altogether. The areas gained from the river were first of all used as gardens, then finally built on, till now only the ancient *ḥiḥ* reminds one of the change they have undergone. It is in this way, that the whole area between the modern bed of the Nile and the ancient settlements has arisen within the Muhammadan period. It is evident that this constant process of change does not facilitate the identification of localities.

At the period of the conquest, there was only one island in the Nile in this neighbourhood, called *Ḥiḥat al-Nīl* or simply al-*Ḥiḥat*. This island is in its outline identical with the modern island of Rōḍa. With Babylon (see above) it formed a single strong fortress and guarded the passage of the Nile. We have no definite information as to whether the *Ḥiḥat* was already connected with Dīsa also by a bridge at the time of the conquest or only with Babylon. In the time of the Caliph Ma'mūn — this is the

earliest date known — there was a bridge over the whole Nile which was even then known as "the Old" and replaced by a new one. This old bridge must therefore — as it is *a priori* probable — date back to the beginnings of Muhammadan rule. In all the centuries following, this bridge crossed the whole Nile. It was a bridge of boats. According to some statements, the *Ḥiḥat* was at first practically in the centre of the river. The arm which separated it from Babylon soon became silted up however. In the year 356 (947) the Nile had retreated so far that the inhabitants of Fustat had to get their water from the Dīsa arm of the Nile. It was at this period under Kaḥr al-*Ḥiḥat* that the deepening of the eastern arm of the Nile was carried out, to be repeated several times in the 11th (12th) century under the Aiyūbids. In 600 (1203), it was possible to walk dryshod to the Nilometer on the *Ḥiḥat*. In 628 (1230) the energy of Malik Rāḥī brought about a permanent improvement, though Malik Rāḥī also annually took advantage of the period of low water to deepen the arm of the Nile which gradually became a canal. Why did they wish to preserve this particular channel? The reason is to be found in the military importance of the *Ḥiḥat*. At the conquest the Arabs found a castle here; the Byzantines who were shut in by the Arabs, were able to escape over the *Ḥiḥat*. After the fall of Babylon, we hear nothing further of the island fortress. In the year 54 = 673 the naval arsenal (*al-Sanāʿa*), a dock for warships, was laid down here. This arsenal is mentioned in the papyri of the first century; it was also a kind of naval base. The Tulun was the first to make the island a regular fortress again, when he thought his power was threatened (363 = 876); but the Nile was more powerful than the will of the Tulun, and his fortress in the Nile gradually fell into the waters: the remainder was destroyed by Iḥshād in 325 (934); two years later this prince removed the arsenal also to Fustat and the *Ḥiḥat* became a royal country residence. The island appeared to have become larger in course of time and more people came to settle on it. Under the Fātimids it was a flourishing town and one talked of the *ḥiḥ* of towns, Cairo, Fustat and Dīsa. Al-Aḥqāl, the son of Badr al-*Ḥiḥat*, built a pleasure palace with large gardens to the north of the island and called it Rōḍa. This name was gradually extended to the whole island which has retained it to the present day. Later, under the Aiyūbids, the island became a *ḥiḥ*. This *Ḥiḥat* was rented by Malik Rāḥī who built the third great Nile fortress on it. This new fortress was called *Kasr al-Rōḍa* or *Kasr al-Ḥiḥat*. Malik Rāḥī evicted all the inhabitants of the island and raised a church and 53 madrasas to the ground. In their place he built 60 towers and made the island the bulwark of his power; this was the reason of his regular dredging operations to deepen the canal separating the island from the mainland. There, surrounded by the Nile (*Rōḍa*), he dwelled with his Mamūlūk who became known as *Ḥiḥat Mamūlūk* from their citadel (see Ruyāl p. 386); but even this stronghold in the Nile did not ensure his safety. After the fall of the Aiyūbids the Mamūlūk Alḥak destroyed the fortress; Balḥar rebuilt it, but later Mamūlūk like Kaḥrān and his son Muḥammad used it as a quarry for their buildings in Fustat.

In the 12th (arab.) century the proud citadel of the Nile had fallen to pieces and another dyoastly was building on its ruins. Rôsa never again took a prominent part in history.

At the present day the most remarkable sight in Rôsa is the Nilometer (*Midyâr*) which dates from the time of the Umayyad Caliph Sulaimân; its erection was completed in the year 97 (715) by Uthman, the minister of finance. The history of this *Midyâr* has been written in a masterly fashion by Marek who took part in Napoleon's expedition, (*Mémoires sur le Nil et de l'Égypte, État Moderne*, 2. ed. Vol. xv, cf. 1800-80. Vol. xviii, p. 555 et seq. and xviii, 2, p. 466 et seq. and M. van Brichen, *Corpus inscriptionum Arabicarum, Mémoires de la Mission archéol. franç. en Égypte*, xix, p. 18 et seq.). Its history, which we owe mainly to Marek, is briefly as follows. The building erected in the year 97 (715) had to be repaired in 119 (804) in the caliphate of Ma'mûn and again under Mu'tawakkil in the years 233 (847) and 247 (861). Up to the latter year, a Copt was in charge of the *Midyâr*, but in this year Ibn Abi 'l-Raddâd was placed in charge of this important instrument, the barometer not only of the prospects of harvest but of the prevailing market prices in the city. The office was hereditary in the family of the Banû Abi 'l-Raddâd in the Ottoman period. Almost all the Muhammadan dynasties of Egypt have built around the Nilometer and some of them have left inscriptions. The Turks, French and English (1893) have also been active in preserving this venerable monument. In modern times a water-gauge was required for the eastern quay-wall of the island. The historic *Midyâr* is like an enclosed well to the centre of which rises a marble column on which the scale is marked in eils (*dhira*).

At the present day Rôsa is much built upon and only in the north are there large gardens. Nothing has come of the French expedition's plan of laying out a European quarter here. Before the regulating of the Nile this would have been a dangerous undertaking, for medieval writers tell us of occasional inundations of the island, when the Nile came exceptionally high. The idea, which was in itself, has been put into practice in a still better situation further north on the Djazirat Bûlâk.

From the historical point of view, Rôsa is inseparably connected with Dîjra (Gize), with which it formed a defence of the city up to the Nile at the time of the conquest, and during the middle ages. Dîjra was certainly not a foundation of the Arabs, but portions of the conquering army planted their *khayr* there as did their companions in Fustât. On account of its exposed situation to attack from the other side of the river the Caliph ordered Dîjra to be fortified. The defences were completed by 'Amr in the year 22 (643). It was probably only a matter of restoring or extending Byzantine fortifications. The *khayr* of the Abbasids partly outside the fortress which was probably merely a stronghold at the entrance to the bridge. The strongest tribes settled here were the Hilyas and Haradan; in the Masjid of the latter the Friday service was held; it was only under the Ikhshidids that a Chief Mosque was built in Dîjra in 350 (961). Its military importance naturally went parallel with that of Rôsa and the bridge

over the Nile. This bridge collapsed in the Ottoman period and was only rebuilt by the French. It was afterwards removed and recently a permanent bridge has been built. Dîjra itself has always been a flourishing centre. The land behind it is very fertile, and it used to be the chief town of a district (*dîwân*), and afterwards in the present day of a province. The modern province of Dîjra comprises the circles of 'Asyûf, Minshab, Dîjra and al-Qaff, the latter on the right bank of the Nile. The place itself had in 1897, 16,000-17,000 inhabitants.

5 The Fatimid City, Miyr al-Kahira.

The modern Cairo was originally only a military centre, like al-'Askar and al-Qa'îr, north of the great capital of Miyr al-Fustât. When the Fatimids in Kairawan saw the precarious position of Egypt under the later Ikhshidids, they felt the time had come to put into operation their long cherished wish to occupy the Nile valley. On the 11th Shabân 358 = 1st July 969, their general Djawhar overcame the feeble resistance, which the weak government was able to offer him at Dîjra, and entered Fustât on the day following. He pitched his camp north of the city and for seven days his troops poured in through the city. When on the 18th Shabân = 9th July the whole army had collected around him, he gave orders for a new city to be planned. Such an important undertaking could not be carried out in these days without first consulting the astrologers as to what would be the propitious hour to begin. The historians tell us that a suitable area had been marked off and all the more distant parts of it connected with a bell-pull, so that at the given moment all along from the astrologers' work might begin everywhere at the same instant. The bell-rope was however pulled before the auspicious moment by a raven and the building began at a moment when the unlucky planet Mars, the Kâhir al-Falâk, governed the heavens. This calamity could not be undone, so they sought to deprive the evil omen of its malignance by giving the new town the name of Ma'adîya. As a matter of fact, Cairo does appear to have borne this name till the Caliph Mu'izz himself came to Egypt and from his own interpretation of the horoscope gave it a favourable omen in the rising of the planet Mars. The new foundation thus received the name al-Kahira al-Mu'adîya (*Adîyat*, I, 377).

The process of expansion of the old city of the Fatimids can be reconstructed even at the present day without difficulty on a plan. The best is the French plan of the year 1798 in the *Description de l'Égypte*, because it was prepared before Cairo had been modernised, but the map in Basileket, after which our sketch map is prepared, also gives a clear idea of the town. In the centre between the northern boundary of Fustât and Heliopolis ('Ain Shams), there lay at this time the little village of Miyyat al-Ashagh, where the caravans for Syria used to assemble. Miyyat al-Ashagh lay on the Khattâbî, a canal which traversed the whole length of the plain, leaving the Nile to the north of Fustât, passing the ancient Heliopolis and finally entering the sea at the modern Suez. This canal was probably originally a silted up branch of the Nile, which had been excavated for use as a canal even in ancient times. After the Arab conquest, it was again cleaned out by 'Amr to make a navigable waterway between Fustât and

the holy cities to supply the latter with corn. It then received the name of Khaliq Amir al-Mu'minin. This Khaliq was closed in 69 (688) to cut off the corn-supply of the anti-Caliph in Medina and finally abandoned as a waterway to the Red Sea in 145 (762) in the reign of Manṣūr. It still remains for a thousand years the water supply of the plain north of Fustat and formed the water-road, so named in song, on the west side and at a later period to the centre of Cairo. After the reign of the Fatimid Caliph al-Hakim, who did much for it, it bore the name of Khaliq al-Hakim; at a still later period it was called by a host of names of different stretches of it, which are given on the French map of 1798. Instead of flowing to the sea, in the later centuries of its existence it ended in the Birket al-Bjabb in the north of Cairo and in its neighbourhood. It is only quite recently (the end of the 19th century) that it has vanished from the plan of Cairo. Its course is still clearly recognisable; it corresponds to the burial road followed at the present day by the electric tram from the Mosque of Salihiya Aḥmad, as rather from a farther point in the south of Cairo to the northern suburb of 'Abduh (Shari' Helwan).

The Fatimid city lay immediately south of Manṣur al-Ashagh between this canal and the Muḥammad. Its northern and southern limits are still defined by the Bab al-Fatih and the Bab Zuwayla. The town founded by Iḥwār was rather smaller in compass than the Cairo of the later Fatimid period. At first the open space in the south, where the Muḥammad Mosque now stands, and the Mosque of Bakim in the north were both outside the walls. In the west, the Khaliq for centuries formed the natural boundary as did the heights in the east. The main part of the Fatimid city was defined by a broad series of streets running north and south parallel to the Khaliq, connecting the two gates just mentioned with one another and dividing the city into ten large sections not quite equal in size. This series of streets is also clearly defined at the present day, though it must have been broader originally. It is still known by different names in the various sections, of which the best known is Shari' al-Nahhasin. At the present day it is crossed at right angles by one of the main channels of traffic of modern Cairo, al-Sikka al-Jadida, the continuation of the Maḥdi, i.e. "New" Street, proves what must be particularly emphasized to avoid misconception, viz. that the Fatimid city had no such main street running from east to west. It only arose in the 12th century.

If Fustat had been divided into *ḥiṣṣat*, Cairo was divided into *ḥiṣṣat* or quarters, which is really only another name for the same thing, except that Cairo was intended to be a city from the beginning, while Fustat grew out of the chance arrangement of a camp. The altered conditions of the period are shown in the fact that the quarters were no longer allotted to different Arab tribes but to quite different peoples and races. In the north and south lay the quarters of the Greeks (Akem), to whom Iḥwār himself belonged. His settling his countrymen near the main gate of the city was probably intentional. Berbers, Kurds, Armenians, etc. were allotted other portions of the town. Some foreigners were settled in the Birket al-Bjabb outside the first walls of

the city between it and the Muḥammad. Lastly the negroes, called briefly *al-Ḥid*, who formed a rather undisciplined body, were settled north of the Bab al-Fatih beside a great ditch which Iḥwār had dug to defend the city against attacks from Syria. This part of the town came to be called *al-Ḥamla al-Ḥid* from the ditch and those who dwelled near it.

The splendid palaces of the Caliphs, which are indicated on our map, formed the central portion of the town. We must be careful to distinguish between a large eastern palace (*al-Ḥayr al-Kabir al-Sharḥi*) and a smaller western one (*al-Ḥayr al-Sharḥi al-Sharḥi*). Their sites had previously been occupied, to the west of the main series of streets, by the large garden of Kāfir, to the east by a Coptic monastery (*Ḥayr al-Faym*) and a small fortress (*Ḥayr al-Sharḥi*), which were used for the building of the palaces. The East Palace was the first to be built immediately after the foundation of the city. On the 23rd Ramadan 362 (28th June 993), the Caliph Muḥammad was able to enter it to state. It was a splendid building with nine floors of which three opened on the west part on the main street. This part was 1264 feet in length and the palace covered an area of 116,844 square yards; it lay 30 yards back from the present street, from which one may gather how much broader the latter must have been. On the other side of the street lay the Garden of Kāfir, which stretched to the Khaliq. In it 'Amr (365-388 = 975-996) built the smaller western Palace also called *al-Ḥayr* after him — the exact year is unknown — its two wings stretched up to the street enclosing a broad square into which the street here expanded. As this series of streets passed between the two palaces in the centre of the town here, it was called *Ḥayr al-Kāfir al-Faym*, a name which survived the palaces themselves for centuries and was still in use at the time of the French expedition. The whole street was also known more briefly as *Ḥayr al-Faym*. The two palaces began to fall into ruin in the Ayyubid period. The history of this part of the town, and of the great palace in particular of which some fragments still survive built into other houses, has been most carefully dealt with by Ravaisse in the *Mémoires de la Société Archéologique Française de Cairo*, Vol. I. and II.

As Cairo was from the beginning a military and not a commercial city at all, even Iḥwār must have taken care to fortify it with walls. These walls were afterwards extended in the reign of the Caliph al-Mustansir by the commander-in-chief Badr al-Jamālī and the gates built in the form in which they have survived to the present day. Thus Badr built all the walls, as disputed — perhaps wrongly — by Cassanovi. Mention is made in later times of a third building of walls in the reign of Saladin. Iḥwār's walls were of brick; no trace of them has survived. Even Muḥammad knew only of a few unimportant fragments and says that the last remaining portions of them were destroyed in 803 (1400). In spite of Muḥammad's admiring statements (i. 377), Iḥwār's wall must have survived for a very great length of time, for so early a traveller as Nāḥir-i Shīrāw (p. 131) describes Cairo as unfortified. Badr's defences which were begun in 480 (1087) consisted of a brick wall with strong gateways. At once, the portions of the walls adjacent to

them being of stone also. Max van Berchem (*Journal Asiatique*, 1891, 443 *et seq.*) has exhaustively studied these walls and gates and called particular attention to the fact that the great gates, which still command admiration at the present day, the Bab al-Futuh, Bab al-Nayr and Bab Zuwayla, were built by architects from Khawara and differ in a rather marked degree from the later fortifications of Saladin, which appear to be influenced by the Frankish style of the Crusading period. We also owe to van Berchem an accurate delineation of those portions of the walls which still survive at the present day, which date from the Fatimid period. The picture we have of the two walls of the Fatimid period is as follows. In the west, the town was bounded by the Khaliq which ran below the walls for 1300 yards and served as a moat. It is a debatable point, whether we may conclude from the street name Bab al-Sira, *see* *ibid.* (1891, 443), that two walls existed here one behind the other. Khawara's walls were certainly a fair distance from the canal, the space being large enough to allow of pleasure palaces being built on it. There were three (according to Canavova, only two) gates here, from south to north, the Bab al-Sira, Bab al-Family and the Bab al-Khazra. At the latter, near the northwestern stretch of the walls, there was, as the name shows, a bridge over the canal. This connected the town with the suburb and harbour of al-Maka, on the Nile, the ancient Umm Dunaan. On al-Maka cf. *Papyri Schott Schenck*, I. 53 *et seq.*; the name appears in the Græco-Arabic papyri of the first century; even before the foundation of Cairo, therefore, this was the harbour at which the customs were collected. Al-Maka *see* have comprised the modern Bab el-Kayn and the area adjoining it on the north. The northern side of the town must naturally have been the most strongly fortified. Khawara had a ditch dug here along the wall. The two gates, Bab al-Futuh and Bab al-Nayr, built by him, lay more within the town than the modern gates of the same name which only date from Badr's time. The Mosque of Ikhlim was originally built outside the walls and was first included within the fortified area by Badr. There seem however to be reasons for believing, that Ikhlim was the first to advance the line of fortifications here as well as to the south and to build new gates (Khayyumi, transl. by Wartenfeld, p. 50; Saladin (see Bibliography) p. 50 *et seq.*). The wall had two gates on the east, the Bab al-Kharaba (afterwards al-Mahruk) and the Bab al-Barqiya. In this locality Badr's fortification also included the quarters which had arisen after the erection of Khawara's wall. Finally Badr moved the Zuwayla gate somewhat farther to the south. There were originally two gates. The town as extended by Badr was still anything but large. It may have been about $\frac{1}{2}$ of a square mile in area.

The intellectual and religious life of Cairo was concentrated in the great Mosque, the *Madrasa* al-Akhar, in which the first service was held on the 7th Ramadan 361 = 30th October 971. On the history and importance of this Mosque cf. the article *akhar* by Karl Vollers p. 532. The erection of the Mosque above mentioned outside the northern gates had already been begun in the reign of 'Adi and was completed by his successor after whom it was called the *Madrasa* of Ikhlim. The building operations lasted from 363 (1002)

to 403 (1013). After an earthquake, it was entirely restored by Saladin II in 703 (1303), who added the minaret. It was used by the French as a fortress and at the present day is in ruins. Of the other ecclesiastical buildings of the Fatimids only two deserve particular mention: the Mosque of Akmar, with its charming stone facade, so important in the history of art (Frazer Pease, *Kairo*, p. 29 *et seq.*). It was finished in 349 (1155), but it was only under the Mamluks that it received the right of *Kutub* in 501 (1398). The second of these two monuments is the older Maydan Mosque, built quite outside of Cairo on the summit of the Mokattam, which was built in 478 (1085) by Badr al-Jamali (van Berchem, *Corpus*, No. 32; *see*, *Mémoires de l'Institut Égyptien*, t. II.). On other buildings and inscriptions of the Fatimids cf. the works of van Berchem just quoted. It is impossible to detail here all their buildings, *see* mentioned literature. Most of them did not survive the dynasty or survived it for a brief period only.

During the Fatimid period, Cairo was not yet the economic centre for all Egypt which it was to become under the Ayyubids and Mamluks. This role was first held, as we have seen, by Fustat. On the other hand, Cairo was pre-eminently the seat of a splendid court with all its military pageantry. The Turks and others have given us vivid pictures, preserved in *Mahtab*, *Khatib* and others, of the ceremonial processions and festivals, the *magalnas*, *tanawils* and *malles*, the banners and insignia, the members of the royal household, the various classes of officers of state and court officials with all their pompous ceremonial *Bayan*nesses, like Nagib al-Khurasani, confirm these accounts. It must have been a glorious period for Cairo, but was soon followed in Saladin's time by a desolate epoch of anarchy when the economic foundations of its prosperity were destroyed by famine and unrest. A better era dawned on Cairo with the accession of Badr al-Jamali. Cairo now began slowly to gain over Fustat in economic importance, a process which gradually became more definite in succeeding centuries.

6. The Citadel and Post-Fatimid Cairo.

Quite a new epoch in the history of Cairo as in that of Egypt dawned with the accession of Saladin and the Ayyubids (see the article *sovereign*). The history of the growth of the city only can be discussed here. Saladin twice played a part in this development by erecting large buildings. Canavova has thoroughly dealt with this process in his *Histoire et Description de la Citadelle de Cairo* (*Mém. de la Soc. Arch. Égypt. et Grec.*, Vol. VI.), though his conclusions cannot perhaps be regarded as final on all points. The material is too imperfect. At any rate he is probably right in saying that Saladin in the first instance in 655 (1250) only restored and improved the fortifications erected by Khawara and Badr I; was only after his return from Syria when he was at the height of his power, that Saladin conceived the colossal plan of enclosing the whole complex of buildings forming the two towns of Fustat and Cairo within one strong line of fortifications (572 = 1179). This new foundation was to be surrounded by a fortress (*Kutub*) after the fashion of the strongholds of the Crusaders. This fortress

is the modern Citadel or, to be more accurate, its northern part. In the northwest, Cairo was to be protected by this strong fortress and to the south-west, Fustat. The east wall of Cairo was to be advanced further east to the Melqam and the entrance for troops from Syria to be definitely closed. A new wall ran along the hills from the new tower in the north-east, the Burj al-Zafir, of which traces still exist. It then took a turn westward towards the old city wall, the fortifications of which were to be extended farther south to the Citadel. The north wall of Cairo was to be advanced westwards up to the Nile and to run along it to near the Bay al-Sham', which was the extreme north point of the whole system. A wall was to run thence in the east of Fustat, direct to the Citadel. The Ka'a itself was to be the residence of the sovereign. Saladin's trusted emir Karakush was entrusted with the task of carrying out this gigantic undertaking; he had previously carried out building operations for Saladin. The huge undertaking was never completed nor did Saladin avail himself of the Citadel, but when in Cairo, as a rule, he lived in the old Fustat palace of the Fatimid city. The most important part was the completion of the north wall which was actually built eastwards as far as the Burj al-Zafir and westwards as far as al-Mak on the Nile. The portion connecting the eastern wall of the Fatimid city with the Citadel was not completed. The remains of several gates in the great wall which was to run from the Citadel to the south of Fustat, have been handed down, but it can hardly be assumed that they were ever built. The wall along the Nile was never begun at all; but it was probably the least urgently required.

These buildings had considerable influence in two directions. After the north wall had been advanced up to the Nile, the broad stretch of land between the Khalij and the Nile was secure from invasion and the way was paved for an extension of the city in this direction. The Khalij thus gradually came to be in the centre of this extended city. Through the removal of the forces of defence and later of the court itself to the Citadel, Cairo began to develop in the south also and the union with the northern suburbs of Fustat, which has been described in section 3, thus came about. This process was not however completed till the Mamlik period (A.D. 1250, l. 378 et seq.).

The Citadel was first appropriated for the use to which it was originally intended as the residence of the sovereign by Saladin's nephew al-Malik al-Kamil, who was also the first to build a palatial residence here. He entered the new palace in 604 (1207). From this time onwards, with the exception of the reign of al-Malik al-Salih, whom we have already become acquainted with as the builder of the fortress and royal residence of Rifa in the Nile, the Citadel remained the abode of all the princes and pashas who ruled Egypt till the Khedives went to live in various palaces they had built for themselves in the plain again. It is difficult, however, to draw a picture of the gradual transformation of the Citadel, as the most radical changes were made in the Mamlik period. The present walls still show that we must divide the whole area into two sections, the original north or north-east Citadel, the Ka'a al-Makel proper of the Aghlul period, which was and is still

separated from the Melqam by a deep ditch, and, in the south extending towards the town, the Citadel of the palaces where the Mamliks built a complicated entanglement of palaces, audience-chambers, stables and mosques. We must therefore distinguish between the Citadel proper and the royal town which adjoined the Citadel. Of Saladin's buildings, which lasted 7 years, there remains today only a portion of the wall and the so-called Joseph's Well (*Bir Yusuf*); the latter is a deep shaft from which Karakush, the architect of the fortress, obtained water. The machinery for raising the water was driven by oxen. A pathway hewn out of the rock leads down to the bottom of the well. The name *Yusuf* is not the personage of Saladin but commemorates the Joseph of the Bible, legends of whom are attached to other portions of the Citadel also. Great alterations were made in the Citadel by Baibars and his successors and their buildings again were completely altered by al-Malik al-Nasir Muhammad b. Qal'au, many of whose buildings have still survived, as for example the mosque wrongly called after Qal'au, (erected in 718 = 1318) and remains of his palace in black and white, hence called al-Hajr al-Ahlaq (built 713-714 = 1313-1314). The same prince also laid down great aqueducts to bring the water of the Nile to the Citadel, as the wells were not sufficient to supply the increasing numbers of military quarters there. At a later period Qal'au took an interest in the Citadel again and Qutb also laid out a garden here. The Ottoman Pasha built a good deal here also, but they allowed more to fall into ruins. Muhammad 'Ali was the first to take an active interest in the Citadel again; he repaired some of the ancient palaces and built the so-called Al-Bahar Mosque, the *Qasr* Muhammad 'Ali, in the Turkish cupola style, the minarets of which give the present Citadel its characteristic outline. It was begun in 1829 and finished in 1837 by Said Pasha. The restoration of the walls also dates back to Muhammad 'Ali.

It was not only in the Citadel but in the city lying at their feet also that the Mamliks erected numerous splendid buildings. The Cairo created by them was practically the Cairo that existed when the French expedition arrived there. A vivid picture of the home of the Mamliks in the period of their splendour may be obtained from the plan of 1798. A series of splendid monuments stood here partly built on the ruins of Fatimid buildings. We will only mention a few that still exist: on the site of the 'Azu palace stood Qal'au's hospital, the Madrasa and tomb of his son Muhammad al-Nasir and Barqak's Madrasa. There were also numerous Mamlik buildings on the site of the great East Palace, including the Khaw al-Khalil well known at the present day. Of other large buildings at this period there may also be mentioned the Mosque of Zahir, built by Baibars I, of which the massive walls still survive at the entrance to the 'Abd al-Rahman Mosque of Sultan Hasan at the foot of the Citadel (cf. *Henri Rey, Le Muséum du Sultan Hassan au Caire*, Cairo 1895), of great importance in the history of art, the M'r'izid Mosque at the Bab Zuwayla, only completed after the death of its founder and Qal'au's Madrasa; we cannot detail the numerous tombs outside the town proper nor the many other smaller buildings. What a lamentable contrast to

this period of activity in architecture is afforded by what has been done in the Turkish period (since 1517) in the city of the Mamlik; only a few *Konaks* for Pashas have been built, a few *Sabils* and one or two smaller Mosques and Tekyes. The configuration of the town did not however change so much between 1500 and 1800 as in any earlier period of the same length. In spite of the ravages of their soldiers the city must have flourished and increased under the warrior princes of the Mamlik period. It ~~must~~ have been a busy and splendid city. But the grave damage done by the Mamlik system could only be repaired by strong rulers. The Ottoman Pashas were not fit for the task and so Cairo slowly declined till Muhammed 'Ali and his successors created a new Cairo which gradually became Europeanized.

7. Modern Cairo.

Modern Cairo dates from the period of French occupation (21st July 1798—25th June 1801). The French scholars were able to make a plan of Cairo as it had existed in mediæval times. What strikes one most about their excellent plan, is the large number of ponds of not inconsiderable size which were then in the city. These ponds, for example the *Biḥar al-Ezbekiye* in the north, and the *Biḥar al-'Al* in the south, were at that time only full of water when the Nile was flooded. They were covered with boats ~~on~~ these occasions, which were illuminated at night for pleasure trips. When the water had ~~run~~ off, the bottom soon became covered with vegetation, which withered ~~in~~ the early summer. The origin of these ponds has already been discussed above. The plan shows the confusion of streets which is still naval at the present day in the native quarters. Only the *Umayyad* thoroughfares, parallel to the *Ḥaḍḍij* — one of them the ancient great medium of traffic in the Fihlud city — divide ~~the~~ town into distinct sections. The city ~~was~~ divided into 35 quarters (*ḥuḍūd*), which took their names from the chief monuments of architecture in them, from groups ~~of~~ trades, or from particular nationalities settled in them (Greeks, Armenians etc.). There were 31 city-gates. The population ~~was~~ estimated at 250,000—260,000 inhabitants, whose houses numbered 25,000—26,000. There were still gardens lying between the boundary of the city and the Nile. Communication ~~was~~ difficult, and after a riot, the French found themselves forced to make a direct connection between the Ezbekiye and the old Fihlud city. It was thus that the modern Muḥḥi (properly al-Muḥḥi) arose; the Ezbekiye was also connected with the suburb and harbour of Bulḍi on the Nile — now a part of Cairo with 70,000—80,000 inhabitants — by a broad ~~road~~. Various ~~old~~ buildings were converted into forts, for example the Mosque of Uḥaym and the Mosque of Zahr; in al-Kabab — the western slope of the Citadel Yashkur — the Mamluk Fort was built and ~~soon~~. The gradually increasing influx of foreigners (Levantine) which has been going on under the Khedives since the French period, and the modernizing of the government which requires ministerial offices, have brought about the foundation of various new quarters of the city; the ground between the western boundaries of the town has been more and more built over and at the same time the boundaries advanced on the north side. The new quarters usually took their

names from their founders, for example, the 'Abḥdaiye, the northern Levantine quarter called after 'Abdā I. (1848—1854), the *Ḥamḥiye*, north-east of the Ezbekiye after the Khedive Ismā'īl (1863—1879). This is adjoined on the south by the quite modern quarter of European houses, the *Kar al-Dakira*, in which the palace of the English Agent is situated. The Tawḥiye quarter was laid out under Tawḥ (1879—1892) to the north of the *Ḥamḥiye*. The old ponds are now built over, the Ezbekiye, which takes its name from an Emir Ezbek of the Mamlik period, was transformed into a beautiful park in 1870, and the finest hotels, the Opera House and other buildings have sprung up around it. A new feature enters the plan of the city in 1889 when the Ezbekiye was connected by a long straight thoroughfare (*Ḥaḍḍij* 'Muḥammad 'Al) with the Citadel. Cairo, which is flourishing rapidly, is constantly extending to the north and west. Helipolis with its huge hotels has already become a suburb of Cairo, in the west the European population has occupied the *Ḥamḥi* (Bilḥ) where the splendid gardens of the royal family have recently been divided up into smaller plots for private owners. A bridge is now being built here. The southern end of the island has long been connected with the east bank (at *Kar al-'Ain*) by a swing-bridge.

In the south, although still slowly, the city is beginning to advance into the region of the mounds of ruins of the ancient Egypt. The railway has ~~now~~ brought the health-resort of Helwan so near the city that, like Helipolis, it is regarded as a suburb of Cairo.

There has thus arisen in the last century out of the cramped and closely built town of the Mamliks an extensive and spacious Cairo, planned on a magnificent scale by the Khedive Ismā'īl. The Levantine quarters are usually built in the South Italian style or after French models. In the most recent quarters, the modern individualistic style is most prominent. A glance at the plan shows by ~~the~~ way the attention where European architecture has been at work and where the old-fashioned native style survives. Cairo has now over 600,000 inhabitants. It has a governor of its own and in it are all the important government offices. The 'Abdā Palace is used for official receptions, but the Khedive lives the greater part of the year in other palaces.

Conclusion: It is duly necessary to give a history of the architectural development of the city here as the political history of Cairo will be dealt with in the article *over* in connection with the history of the country. Further information regarding economic conditions will also be found there. As regards our plan it should be noted that ~~the~~ plan of Farḡ is a reproduction of *Guicci's* plan from the *Journal of the Royal Asiatic Society*, 1907, pp. 49—53, while the plan of Cairo is new, being based on *Brediker's* with the inclusion of the results of the researches of *Ravulaz* and *Casamiro*. Its aim is rather to give a systematic but clear view of the history of the town in its general development than to ~~be~~ topographically accurate.

Bibliography: The main sources are: *Maḥḥi, al-Ḥaḍḍij*; *Ibn Inḡmāh, Kūḥ al-Insipr*; 'Alī Muḥḥi, *al-Ḥiḍḍij al-djādida*. There are occasional mentions of the city in most of the ~~Arab~~ geographers and travellers of European accounts of the town and discussions of the

original authorities, there may be mentioned in addition to those quoted in the text: *Description de l'Égypte, État Moderne* (Text and Atlas); A. F. Mehren, *Cairo et Hérakles* (Copenhagen 1869) and thence *Bulletin de l'Acad. Imp. des Sciences et St. Pétersbourg*, L. vi; Henry C. Kay's articles in the *Journal of the Royal Asiatic Soc.*, xiv, xviii; C. H. Wuttmann, ibid. xviii; R. E. Cutbush, ibid. 1891; the publications of the Comité pour la Conservation des Monuments de l'Art Arabe, which has been in existence since 1814 (loc. 1881; also Ravanne in *Mémoires de la Mission Arch. CAEMAK, **AL-MALIK AL-ZAHIR BAY AL-DIN**, Sultan of Egypt, was in his youth enrolled among the Mamluks of Sultan Barqak. He gradually rose, till under Sultan Barsbay he became Chief Chamberlain (President of the Administrative Council), Chief Master of the Horse, and finally Atabeg (Commander-in-Chief). On his deathbed in 842 (1438), Barsbay appointed him regent for his infant son al-Malik al-Aziz Yūsuf. The various divisions of the Mamluks, originating in the bodyguards of the Sultans Barqak, Nāṣir Farāj, Muḥammad Shāh and Barsbay, were at enmity with one another and their sole aim was to obtain all the wealth and influence they could. In the confusion that arose the only person upon whom all eyes turned for the rescue of government for himself, Sultan Yūsuf was deposed, placed in confinement in the Citadel, released after an attempt to escape and finally taken to Alexandria and kept under a mild form of custody. Soon afterwards the resistance of the governors of Damascus and Aleppo also collapsed; they had been defending Sultan Yūsuf's claims to further their own interests. The Syrian rebels were defeated, the **Mamluks** executed and Caemak's supremacy was restored in 843 (1439). Like his predecessor Barsbay (q. v., p. 666) Caemak wished to extend the Christian lands under pretence of checking piracy on the north coast and therefore sent ships via Cyprus to Rhodes and the Egyptians had to return as the resistance offered by the Knights of St. John, who were well prepared, was too strong for them. In the years 846 (1442) and 848 (1444) the Egyptians again made unsuccessful attempts to conquer Rhodes, and had finally to make peace with the Knights. Caemak's foreign policy was a successful one; he was on good terms with all Muhammadan rulers and did not, like Barsbay, fall into the error of causing irritation by petty trickeries. Against the advice of his harem, he allowed Timur's son Shāh Rukh to send a covering for the sacred Ka'ba, although this was a privilege of the Sultans of Egypt (see the article **BAHMAN** p. 388). The populace was still so strongly incensed against the Mongols that they actually attacked an embassy which included one of Timur's widows. He was also on

good terms with the Ottoman Sultan and the princes of Asia Minor. In his domestic policy, in Egypt itself, he was not quite able to put a stop to the mismanagement of the state monopolies [see **BAHMAN** p. 667]. Jews and Christians were tormented with strictly enforced petty regulations. He could not restrain the arrogance and outrages of the Mamluks so that the only way he could protect himself from them on the occasion of festivals, was to forbid them to go out. He himself was an exceedingly frugal and pious man. Loyal only to the learned, and thought no price too high for a beautiful book, he left but little property behind him on his death. Through his example the morals of the court improved. When, in the year 854 (1453), he felt the approach of death — he was now over 80 years old — he had homage paid to his son 'Othmān whom the Caliph chose to be Sultan. The Emirs and officials of the court and a large multitude of the people attended his funeral, contrary to the usual custom, sincerely grieving at his loss.

(M. SOBERHEIM.)

CALATRAVA, Arab. **KAL'AT HANAY**, "Kaluh's Citadel", called after the **rab** and **al-Khal** 'Alī b. Kaluh al-Lahmī (cf. Calatayud (Mallorca) = Kal'at Aiyūb from the **rab** and **al-Khal** Aiyūb b. Hāshim al-Lahmī) was an important bulwark of Arab power (perhaps built on Roman or Iberian ruins) north-east of the modern Ciudad Real on the left bank of the upper Guadiana just below the union of the three rivers which form it, the Záncara-Siguera, Guadiana Alto and Bajo-Arco, one league north of the modern Corrida de Calatrava. The extensive zone of ruins of the ancient Arab Castillo with the tower of C. la Vieja would repay more thorough investigation (with pick and shovel also). This Old Calatrava played an important part in the wars of the Emirs of Cordova against Toledo, which was constantly in rebellion, and after its conquest in 1085 as a frontier defence against Castile, till it was itself taken in 1147 by the Emperor Alfonso vi. who handed it over to the Templars, who only held it for 20 years as a frontier fortress of Toledo against Andalus, when they retired from it on account of the constant attacks of the Almohads (from Morocco). This led to the translation of the new religious order of Knights of Calatrava in 1158. After the terrible defeat of the Christians at Alarcos (q. v., p. 350) west of Ciudad Real in 1195, the fortress of Calatrava also was taken and destroyed by the Almohads; for the next few years the fortress of Salvatierra was occupied by the Order till it also was lost in 1210. After the brilliant victory of the Christians at las Navas de Tolosa (*see* **BAHMAN** p. 388) in 1212, which broke the power of the Almohads, Old Calatrava was to be rebuilt on the Guadiana; but it was at a spot half a league from Salvatierra, south of the modern La Calzada de Calatrava near Alcala de la Calzada (3447 feet high) and Puerto de Calatrava, that the still so famous monastery of New Calatrava (Calatrava la Nueva) was founded in 1217; before the splendour of the latter the ancient fortress of the **Mamluks** in the north fell totally

into oblivion, so that at the present day there is the greatest confusion between Old and New Calatrava, two places 30 miles apart. Since the beginning of the sixteenth century New Calatrava also has been abandoned by the Knights and has quite fallen into ruin. Only the name Calatrava has survived in the Order of Calatrava, located in 1493, and in the geographical designation of the former extensive lands of the order, particularly in the fertile Campo de Calatrava in the broad valley of the trilateral on the left bank of the Guadiana, Jabalón and the Tietes rivers, south of the present provincial capital Ciudad Real, founded for the first time by Alfonso the Wise in 1255 as Villa Real, east of the ancient Alarcos, which was given the noble name of Ciudad Real by John II. in 1490. Cf. also Santiago de Calatrava west of Mérida and Jaén in Upper-Andalusia, which came with Mérida into the possession of the Order on the reconquest.

CALCUTTA, or KALIKATA, the capital of the province of Bengal, and, till 1911, also that of British India, situated on the right bank of the Hugli, the most eastern mouth of the Ganges, which is here navigable by the largest shipping. Area, 20,547 acres; pop. (1901), 847,798, being 41 persons per acre. If all the suburbs and also Howrah on the opposite side of the river be added, the total would be raised to 1,066,733. Muhammedans form about 29% of whom the vast majority returned themselves as Bengalis. Pathans or Afghans numbered 12,555, Sanyasis 6,798, and Mughals only 1,303. Calcutta is a creation of British rule, having been founded by Job Charnock in 1690. It was never under Muhammedan rule except when captured in 1756 by Siraj al-Daula, who attempted to change its name to 'Alinagar'. Consequently there are no Muhammedan buildings of importance. The principal mosque is that built and endowed in 1842, by Prince Ghulam Muhammad, son of Tipu Sultan. The Madras, founded in 1781 by Warren Hastings, receives part of the endowment bequeathed by Muhammad Muhiy (q. v.) of Hugli, and in its Arabic department educates more than 300 students, most of whom live in the Elliot Hostel.

(J. S. CORRIE.)

CALDIRAN, a plain in Adharbaidjan east of the Lake of Urmia near Tebriz. It is famous for the battle fought there on the 23rd August 1554 in which the Ottoman Sultan Selim I defeated the Safavid Shah Isma'il mainly owing to his superior artillery. Shah Isma'il had to flee; his camp and harem falling into the hands of Sultan Selim; he only saved from further disaster by a mutiny of the janissaries who refused to advance any farther and forced the Sultan to return from Tebriz to Constantinople. As a result of this victory, Armenia and Kurdistan came, nominally at least, under Ottoman rule, though in reality the Kurdish Bega remained practically independent. In the year 1635 there was another battle here between the Turks and Per-

sians, who had been repeatedly trying to regain the frontier lands. On this occasion also the Turks were victorious.

(J. S. CORRIE.)

CALICUT, or KOLLAM ('cock-fort'), a seaport on the west coast of India, in the Malabar District, Madras Presidency: pop. (1901), 14,981, of whom 40% were Muhammadans, mostly Mappillas (q. v.) descended from Hindu mothers by Arab immigrants. From an early date Calicut was a great centre of maritime trade. It was visited by Ibn Battuta (1345) and by 'Abd al-Razzak (1443), both of whom speak of the security afforded to commerce by its Hindu ruler, the Zamorin, whose descendant still lives here; and it was the first place in India reached by Vasco da Gama in 1498. It contains more than 40 mosques, including the Shakhindas Palli, built over the tomb of Shakh Mansur Kady, said to have been an Arab with a great reputation for sanctity who came from Egypt in the XVIIth century; this mosque is constantly resorted to by Mappillas, for the adjustment of civil and other disputes. Calicut has given its name to Colica.

CAMBAY (KAMBAVA), a Pendency State in the western part of the province of Gujarat, India, at the head of the gulf of the same name; area, 350 square miles; population (1901), 75,225, of whom 13% are Muhammedans. The Nawab, a Shihab by sect, was descended from Miran Khan, governor of Gujarat, who died in 1742. The town of Cambay (population in 1901, 31,780) was in early times one of the chief ports of Gujarat and at the time of its conquest by the Muslims in 1298 it said to have been one of the richest towns in India; the sinking up of the harbour at the close of the 17th cent. drove off the trade to Surat. Cambay is mentioned by al-Mas'udi, al-Ispahani, Ibn Barkal and other Arabic geographers. It cannot now be visited by vessels of more than 50 tons.

(J. S. CORRIE.)

CAMIENIEC, in Ottoman Turkish Kambic, a chief and chief town of a circle in the Russian administrative district of Podolia. It was formerly a strong fortress of the Poles and the scene of many heroic conflicts between the Poles and the Turks in the frontier wars. In the year 1672, it was taken by the Grand Vicer Amiral Pascha Köprülüade, in the reign of Sultan Muhammad IV. who took the field in person in Podolia. The Ottoman poet Nâzi composed his *Tarîk-i Kambic* (1655, in London and Vienna, 1881) printed in Constantinople in 1281 in honour of Ahmad. At the peace of Buczacz (1672) Camieniec with Podolia came into the possession of Turkey, who held it till 1699 i. e. to the peace of Carlowitz (q. v.). In 1795 it was Russian.

CAMPANER, a ruined city of India, in Gudjard, lying beneath the hill fort of Pavagadh. In 1484, Mahmud Shah I of Gudjard, after a long siege, captured the hill-fort from its Rājipī chief, and founded the city, which he made his capital, under the name of Mahmūdābād Campaner. In 1535, it was pillaged by Humāyūn, and shortly afterwards the capital was transferred back to Ahmadābād. The Khāder or Citadel and the Džamī Masjid, both built by Mahmūd with other buildings, still remain in fair preservation, though the whole site is overgrown with jungle, and there are no inhabitants.

(J. S. Carron.)

CANNANORE, a seaport on the west coast of India, in the Malabar District of the Madras Presidency; pop. (1901), 27,811, of whom 40% are Muhammedans, Mappillas [q. v.] descended from Hindu mothers by Arab immigrants. It is of historic importance as the capital of the Alī Rājā or "lord of the sea" (alī = "sea" in Malayalam), who traces his descent from a Hindu converted to Islam about the end of the 14th or beginning of the 15th century. The family still resides here, and nominal sovereignty over the Laccadive Islands.

Bibliography: *Madras District Gazetteer, Malabar* (Madras, 1908).

(J. S. Carron.)

CARPU, the modern name of the ancient Anur [q. v., p. 143] on the Oxus. The town appears to have received its present name in the time of the Timurids: in his account of the events of the year 903 = 1477-1478, Nāṣir-i Ḥasan, ed. Herveidege, i. 283 mentions the passage of the river as Carpu (Carpū pashar). In the year 920 (1504) the fortress of Carpu (in the *Shah-nāma* of Muhammad Ḥabīb ed. Melninski, p. 197: *Carpu kash*, in the Persian *Shah-nāma* of Bakhṣī, quoted by Samuiloviz: *Zapiski vostochn. moshch.*, iii. 1773: *Kash-i Carpu*) had to surrender to the Uzbeks.

In the period of Uzbek domination as in the middle ages, the most important passage of the Oxus was here; boats were always kept in readiness for this purpose; bridges of boats were occasionally built for the passage of large armies [q. v. for example, for Nadir Shāh's army in 1733 (1740)]. Carpu is, however, as far as is known, nowhere mentioned in any authority as a large town in this period, but as the residence of a prince or governor of importance. When Ruṣṣ (Travel, iii. 7 et seq.) was here in the year 1832, the town was governed by a Kalmauk, the number of its inhabitants was not more than 4000-5000, most of whom led a nomadic life on the banks of the Oxus in the hot season. A picturesque Citadel was built on the top of a hill commanding the town. The town was of no importance as a commercial centre, and the wares

exposed in its market were of but little value.

Ruṣṣ certainly is more worthy of credence than Joseph Wolff (*Narrative of a Mission to Bokhara*, p. 162 et seq.) who, writing in 1844, says that fourteen years previously, i.e. about 1830, Carpu had a population of 30,000, but had sunk to be an insignificant place with about 2,000 inhabitants through the incursions of the Khirizms. As long as the ancient caravan route from Persia to Bokhara through Merv was rendered unsafe by the Khirizms and Turkomans, it is evident that no town of any great size could arise here. In 1879, when Mushketov (*Turkistan*, St. Petersburg, 1880, p. 606 et seq.) visited Carpu, affairs were in much the same condition as before, although the hill to the throne of Bakhṣī (Turk-Djan) now lived in Carpu. There were only a few wretched huts in addition to the Citadel and the palace (apparently recently built) of the Turk-Djan. The Turkoman robbers ravaged the country almost up to the very gates of the town. The forests, 30 miles from Carpu, from which the inhabitants got their wood, could only be made use of under military protection.

In the year 1884, the Turkomans of Merv had to submit to the Russians; the old caravan route was replaced by a railway which reached the Amu-Darya in 1886. The importance of Carpu, as a result, rapidly increased; the town, which in the residence of a Beg of Bokhara, has now about 15,000 inhabitants. The town of Carpu, built on a piece of ground granted by the Emir of Bokhara to the Russian government, 12 miles from old Carpu, beside the railway station of Anu-Darya, has now 4000-5000 inhabitants and is the residence of a Russian military governor (*Voynitskiy komendant*). The new railway bridge, opened in 1901, is nearly 1½ miles in length and is the greatest engineering feat of its kind in Russian territory. The town is also of some importance for its shipping; steamers go from here down to Petroskoudrowsk and up to Termez (Tirmidh). Trade is for the most part in the hands of Armenians. Its situation on a railway and at the same time on a great navigable river distinguishes Carpu from all other towns in Turkestan; it was therefore proposed in 1894 to transfer the seat of government from Tashkent to Carpu, but this proposal has since been dropped. The summer is so hot that cereals and fruit ripen around Carpu earlier than in the other parts of the country; the melons of Carpu are regarded as the best in Turkestan.

(W. BARTHOLO.)

CARLOWICE, in Turkish, KARLOVA, a town in Croatia-Slavonia, in the county of Sirmia, with 5490 inhabitants, — almost all Croats and Serbs, — on the right bank of the Danube below Peterwardein. It was here that the Peace of Carlowitz was concluded on the 26th January 1699 between Austria, Venice, and Poland on the one side and the Turks on the other. Russia also took part in the negotiations but it was not till 1702 that she concluded a separate treaty of peace. Austria received Hungary — except the Banats of Temesvár, — Siebenbürgen and Croatia and Slavonia with the exception of the eastern part of Sirmia; Venice received the Peloponnese, exclusive of Corinth, and the whole of Dalmatia, except Ragusa, and in addition the Porte renounced its claim to tribute from the island of

Zaure; Podolia with Cameracoe [q. v., p. 327] and the western part of the Ukraine was ceded to Poland. A truce was to be observed for 25 years. This treaty was of importance as being the first on which Turkey gave up her claims to the so-called "gifts of honour" and stilled itself to the intervention of European Powers (England and Holland).

(F. OIKAR.)

CARMONA, a town in Andalusia, 25 miles S.W. of Seville with a population at present day of 17,000, is the ancient Roman Carma (probably previously an ancient Iberian town of the Turdetani, but the name is not to be derived from the Phoenician *kerma*, "vineyard," fanciful etymologists have proposed). As a strong fortress on a height commanding wide plains, it played a part on Caesar's side afterwards had the right to strike its own coins. In 712 it was taken by Abd al-Nasir and henceforth bore the Arabic name *Karmuna* (pronounced *Karmūna* in Spain, the modern *Carmona*). In 753, 'Abd al-Rahmān I was besieged for two months in Carmona by the 'Abbasid rebel al-'Ala b. Mughith al-Yahsubi, but becoming restless in desperation he made a sortie and won a brilliant though sanguinary victory (Ibn al-Arabi, i. 305—307). In 844, the Sevillians fell back here before the Normans. In the time of the rebellions of the vassals against the Emirs of Cordova (end of the 10th century) it was the stronghold of the rebels. In 1066, al-'Ala b. Mughith al-Yahsubi, a safe retreat for the rebels. With the extinction of the Umayyads and the decay of the Caliphate of Cordova (Raynolds, *Andalus al-Andalus*), Carmona made itself independent under the Berber dynasty of the Banu Bishr (Bishr) which possessed practically only the two strong fortresses of Carmona and Ecija (Añig, Estija) east of Carmona on the Gualquivir. Muhammad b. 'Abd Allah 1039—1042, his son Ishak till about 1054, al-'Asir al-Mu'ayyid till 1067, when Carmona fell into the hands of the 'Abbasids (q. v.) of Seville. In 1091 Carmona was taken by Almoravids, in 1147 Almohads; in 1247 it was taken by Frederick III the Saint of Castile and repopulated.

CARNATIO or *KARNATAK*, a name of varied application in Indian geography. As meaning the country where Kannase is spoken, it seems to have been applied originally to the Hindu kingdom of Vijayanagar. When the Muhammadans conquered this kingdom in 1565, they extended the name further south, so that the English erroneously applied it to the Nawab who ruled at Arcot, where the language is not Kannase but Tamil. (J. S. COTTON.)

CASA BLANCA. [See CASA AL-BALAH.]

CAWAT, a Turkish word signifying, "cuber" "doorkeeper". It was formerly the name of a body of 630 court eunuchs employed in the various tribunals, who marched at the head of the procession in state ceremonies (*cawat-ı-ısmâ, cawâ-*

ısmâ): their chief (*cawat-ı-ısmâ*) was vice-president of the Grand Vizier's court, minister of police, grand-master of ceremonies and introduced ambassadors. He also had command of a company of 200 *gedikli sa'im*, who carried orders to the provinces. He also supervised the farming out of taxes during for the lifetime of the purchaser. The same name was also applied to a certain number of musicians drawn from among the pages and wearing the same uniform as the eunuchs. In the army the name was given to a body of 330 subordinate officers of janissaries chosen from the oldest who served as aides-de-camp in time of war and as express messengers in time of peace. They had to carry out the corporal punishments inflicted on officers of janissaries (*cawat-ı-ısmâ*); their chief, the *cawat-ı-ısmâ* commanded the *cawat-ı-ısmâ* of *ısmâ* (q. v.). In the present organization of the army, *cawat* is a rank corresponding to that of sergeant of infantry or quartermaster of cavalry or artillery; the *cawat-ı-ısmâ* is the sergeant-major.

Finally *cawat* is also the name of the best sort of grapes grown in Turkey; it is said that this variety was brought to Constantinople in France and from it has been produced the variety called *cawat* (*cawat-ı-ısmâ*). Vambéry (*Ungarische Sprachstudien*, p. 276 and *Etymol. Wörterbuch der Türkisch-Tatarischen Sprachen* p. 130) derives *cawat* from *cawat* (*cawat-ı-ısmâ*, "call, proclamation") so that it must have originally denoted a herald or who proclaimed a royal command.

CELEBES, is also the largest of the Great Sunda Islands covering an area of 3258 geographical square miles. Like the island of Malakka, it has the peculiar form of a massive nucleus from which four great peninsulas run, north-east, east, south-east and south respectively. The many archipelagoes (768 geogr. sq. miles) surrounding it form continuations of it both geographically and geologically and connecting links with the Philippines, Moluccas and Little Sunda Islands. The island is very mountainous (the highest 10,640 feet) and the plains are few and small so that there are no navigable rivers; it is however surrounded by large and deep bays, that of Bone being 1000 fathoms deep and that of Tumini 1875. The mountains are as a rule to ranges; in the centre they run from north to south and in the peninsulas in the direction of their base. The middle ranges of the centre are of granite, gneiss and crystalline schists, those in the west are of more recent formation of folded sedimentary rocks and those in the west of old volcanic rocks and Tertiary limestones. In the Minahasa and the south there are great volcanic centres. The numerous lakes, and many more have been dried up, give the island a peculiar stamp. They are either tectonic basins in an area where the original rock still exists like Lake Poso (1000 feet deep; 1600 feet above sea-level), Toront (30 miles long, 12—20 miles broad) and Matano (1800 feet deep) or of volcanic origin like Lake Tomdum in the Minahasa.

As regards diffusion of plants, animals and

men, Celebes holds a peculiar position in the Archipelago. The flora shows a transition stage between the Asiatic and Australian region of the Malay Archipelago. In the animal world the large mammals of Western Asia are lacking, only a kind of ape and four forms of Asiatic, true freshwater-fish being found. On the other hand two forms extinct elsewhere are found, the chamois-buffalo (*Axis depressicornis*) and the hog-deer (*Porcus suscipiens*). The Australian part of the Archipelago is represented in Celebes by two kinds of mammals.

The island of Celebes is now wholly subject to the Netherlands and is divided into the residency of Menado, comprising the northern peninsula, the northern half of the centre and the eastern peninsula, and the Government of Celebes and its Dependencies, which consists of the remainder of the island. There are still several native principalities on the north and south peninsulas, such as Gowa, Bone and Luwu in the south, but their ruling houses were deposed in 1906 and 1907 without the slightest opposition on the part of their subjects. Others like Tanete, Sopeng and Sidengreng have still a kind of self-government.

Celebes remained much longer unknown to history than the other Sunda Islands; it is not for example mentioned in *Manila*. It was not till 1572 that Malaya and in 1573 the Portuguese settled on the coast of Gowa, in the course of the 16th century the princes of the Makassar kingdom of Gowa and Tello were conquering the whole of south Celebes, a part of the centre and of the Little Sunda Islands. In the reign of Tunijallo (1565-1590) the Muhammadan prince of Ternate, Babullah, concluded a treaty with them and sought to propagate his religion in Gowa. The first ruler to adopt Islam, however, was Tunijallo's son, who was converted in 1603 by a Malay named Dulu ri Bandang from Menangkabau and reigned till 1639 after taking Sultan 'Ali al-Ulu. His minister Ruzung Motowaya followed his example and Muhammadanism spread rapidly among the many Makassar and Buginese peoples of South Celebes, for the kingdom was at the same time increasing its power considerably.

When the Dutch (after 1607), English (after 1605), Spaniards (after 1618) and other Europeans began to visit the capital Makassar about this time, they entered into commercial rivalry with the Portuguese, who had long been settled there, with one another, and tried to gain trading privileges by alliances with the native princes, mainly for the spices of the Moluccas. The Dutch who ruled in the latter islands were not then able entirely to prevent the export of spices to Makassar. The perpetual breaches of contract and occasional murder of Europeans by the natives lasted till the second half of the 17th century; Speelman, the General of the Dutch East India Company, in alliance with Bone and Ternate, then succeeded in conquering the heart of the Makassar kingdom in 1667 and 1669 and forcing its princes to sign the treaty of Bangaja, the terms of which were afterwards agreed to by all the kingdoms of South Celebes and until quite recently defined their dependence on the Netherlands. Minahasa was another area more important historically and more highly developed. The Spaniards had settlements here as early as the 16th

century but they did not enter much into relations with the heathen population of the interior. With the help of the Dutch East India Company the natives succeeded in freeing themselves from Spanish dominion; their quarrelsome allies have remained there to the present day.

The population of the island of Celebes is estimated at about 1,540,000 souls, or including the islands dependent on it, at about 2,000,000, but its composition differs exceedingly as regards density and development if not in race. As Papuan elements do not appear to exist here, the whole population must be regarded as belonging to the Malay-Polynesian group, unless we allow with the Sarasin (see *Anthropology*) a Toala substratum, the existence of which they believe to have proved over a great part of the island. At any rate the still practically unchanged, heathen Toradja tribes in the centre form the prototype. Their relatives on the southern peninsula have through the influence of Hindus and the Hindu-Javanese and later by admixture with Malays become relatively highly developed peoples, the Makassars and the Buginese. The tribes on the south-east and east peninsulas appear to be very strongly mixed with the Toala tribes who are physically and intellectually at a low stage of development. The population of Minahasa and the surrounding country are of different origin; their language and other characteristics point to a nearer relationship to the Malay peoples of the Philippines, Formosa and Japan. In the commercial centres like Makassar (1059 Eur., 20,178 natives, 1672 Chin. and 141 Arabs), Donggala, Menado (576 Eur., 6669 natives, 2784 Chin. and 500 Arabs), Gorontalo (325 Eur., 3247 natives, 606 Chin. and 327 Arabs), Sidjai (53 Eur., 3578 natives, 108 Chin. and 23 Arabs), Bonihain (155 Eur., 6344 natives, 197 Chin. and 3 Arabs) we find the usual, very mixed population in which the Buginese form the majority; it is only in the larger centres that we find Europeans, Arabs and numerous Chinese.

The Toradja are settled agriculturists who sometimes also fish and hunt and in their own industries show themselves very clever, highly gifted craftsmen. Their numerous tribes dwell in settlements, strongly fortified on account of the continual warfare, in the vast forests which cover Central Celebes. Their density is estimated at 2-4 per square mile. The Toradjas near the Buginese kingdoms on the coast have become converts to Muhammadanism, in the North-East Christianity is becoming predominant; the great majority however are still pagans.

The closely allied Muhammadan peoples, the Makassars and Buginese, originally inhabited the southern peninsula, but, being traders and fearless voyagers, they spread over all the coast areas of Celebes and the greater part of the archipelago from east to west. This statement is particularly true of the Buginese. The home of the Makassars is in the west of the southern peninsula, roughly from Maros to Bulukumba including the kingdom of Gowa. The Buginese inhabit the eastern part of this southern and and farther north their lands cover the whole of the peninsula.

The most important of the kingdoms of the Buginese, which were organised on a system of despotic government, were Bone, Wadjo, Luwu and Sopeng, of the Makassars, Gowa, Tanete, and the southern island-group, Selayar. Besides those

these were and still are numerous smaller kingdoms, which formed alliances with one another and sometimes also were dependent on the larger kingdoms. The ruler of one of these kingdoms is a hereditary prince or princess; he (or she) is aided by a minister and a *kadai*, a council of the most powerful relatives of the ruler and his vassals; subject princes were also members. The power of a prince depends in a great degree on his personality and is associated with the possession of certain regal insignia; the latter is a manifestation of animistic beliefs still predominant among these peoples. Next in rank to the royal house is a nobility which has sprung from it through polygamy, a class of freemen and one of slaves, who have now been freed, and bondsmen. The latter were as a rule well treated but like the poorer freemen were liable to be plundered and severely ill-treated by the higher classes.

As throughout the Archipelago, the daily life of the people of South Celebes is influenced by animistic beliefs, somewhat altered by Hinduism and Mohammedanism; but the ancient usage of family law and the law of inheritance have survived more among them than among the other Mohammedans of the Archipelago. The marriage ceremony as, it is true, performed according to Mohammedan rites but the pagan priests (*masse*) direct the celebrations which follow, often lasting many days; besides princes and chiefs have a good deal of legal control over marriages and divorces. The position of the married woman is a very honoured one; this and their other privileges of inheritance, divorce etc., are due to the many matrimonial customs which still survive among these peoples. It is only in the larger towns that the Mohammedan law of inheritance is becoming more and more followed. The economic position of the Buginese and Makassars is one of the highest in the Archipelago; not only are they excellent agriculturists and horse-breeders but their achievements as weavers, smiths and shipbuilders, their commercial ability, and their skill in navigation and fishing are of a high order. The density of population is estimated at 12 in Gowa, 12 in Tanahe and 9 in Bunc while under the favourable economic conditions in the districts directly under Dutch rule it rises to 25 per square mile.

The Makassars and Buginese languages are written with an alphabet of their own which is derived from a further Indian one. Their literature is fairly well developed; among the press a collection of their laws, *engany* (Mak.) and *latuwa* (Bug.), may be mentioned.

There are important Buginese settlements in the Archipelago on the east (Kotai) and west (mouth of the Kapas and Sambas) of the island of Borneo. In the Riuw Archipelago, on the Little Sunda Islands east of the island of Lombok and in North Sumatra.

The Minahasans, who are now Christians, were divided into tribes, organized on a patriarchal basis, but this has to some extent been altered under the influence of Christian missionaries. With their help and a well developed system of education, they have reached a high stage of civilization which reminds one in many points of European; they enjoy a fair prosperity and the population is about 16 to the square mile, rising in the centre around Lake Towanua to 36. They live mainly by agriculture, cattle-breeding, fishing and

fish-rearing, by commerce and to some extent by industries. Like so many native industries, the fine planted and carved work of the Minahasans has disappeared before the imported products of European manufacture.

The exports are: coffee, copra, Muscat-nuts, banana, tortoise-shell, trivernag, edible birds' nests, horses and gold.

CELEBI, a Turkish word, of the later cultural period, the origin and original meaning of which have not yet been definitely ascertained. *Celabi* is probably to be derived from *celak* (also written *celak*) "blind"; the latter word is at the present day pronounced *calak* in Asia Minor and, according to an article by K. Foy (*Mitteil. des Or. Seminars, Watsch. Stud.*, II, 124), is only word for "God" among the Yürak of Minor. In the written

language *celbi* first appears in the ninth (ixth) century among the Turki poets of Asia Minor; that, as is sometimes (by K. Fuy also, loc. cit.) stated, it is "not unknown to Cypriote", has not yet been proved by quotations. Melissouraki (*Zephioti* etc., vol. viii, p. 112), xv. 042) quotes from the *Kamûs-ı Akadî* (this dictionary is, as Melissouraki has elsewhere (*Arab. Lit.*, p. 112.) shown, extracted by Muhammad Şihî from the *Sagîrî* of İzzet Mîhribânî) the statement, that *celbi* is in Greek (*ἑλληνική*) a name of God (*ἑὸς ὀνόματι*).

The word *celbi* was used in the Ottoman written language down to the 17th (xvii) century as a title or epithet of persons of princely rank, high ecclesiastical officials (particularly those who were at the heads of Derwâsh orders), famous authors, etc. The first person known to have borne this title is Celalzâdî Rûmî al-Dîn (died 683=1284), who succeeded Djâlid al-Dîn Rûmî as superior of the Mawlawî order of Derwîshes (*Grande. de l'Iran. Philologie*, li. 388). In the poems of the poet Kâsimî Azwîrî, born in Adharbâjdjân (died 835=1431-1432), *celbi* means "beloved" in the Sûfî sense, i. e. God (quoted by C. Safemann, *Zephioti* etc., xvii. p. xxix). Several Turkish princes and rulers in Asia Minor in the 15th (xv) and 16th (xvi) centuries were called Celbi, among them all the sons of Süleyman Bayazîd I. (died 805=1403). The Hâfizî (ed. Detmery and Sanguinetti, li. 270) says that *celbi* "in the language of Rûm" (i. e. in Greek) means "my lord" (*ἰσχυρὸς*) in vulgar Arabic (*id.*). On the other hand *celbi* was only known to the Greeks as a Turkish word, according to a gloss in *Christens. Iliad* in the language of the Turks (*ἡ τῶν Τούρκων διαλέκτος*), had the meaning "of noble birth". Is the *Kamûs-ı Akadî* (in Melissouraki, *Zephioti* etc., xv. 042) *celbi* is explained as "writer, poet, reader, initiated, of keen intelligence by nature". The word is similarly explained in Ahmad Wafî Pâshâ's *Lahij-i 'Othmanîya* (i. 482), with the additional note that *celbi* in the sense of "skilled in reading" was later supplanted by the word *esfendi* borrowed from the Greeks. The quotations from European authors of the 17th century collected by W. Smirnow (*Zephioti* etc., xvii, 13 et seq.) do, as a matter of fact, show that *celbi* was then used with the same meaning as the Spanish "Don" and the French "Monsieur", i. e. like the modern *esfendi* from the Greek *ἐσφένδης*. *Esfendi* seems to have come into use as an epithet of poets and scholars in place of *celbi* about the end of the 17th and beginning of the 18th century; it would be of importance to investigate (from the narratives of European travellers and other sources) whether it was not till then or previously, that *celbi* was supplanted by *esfendi* in the language of Ottoman society. Such an investigation has, as far as I know, not yet been made.

Apart from the religious meaning which it has retained to the present day (it still denotes the highest rank in the Mawlawî Order; the superior of the order is called *ishik-esfendi*), *celbi* seems to have had approximately the same meaning as the Persian *mirza* (from *Enir-mîrâ*), which was applied to princes of the blood as well as to nobles and gentlemen, to prominent scholars as well as to humble writers. At the present day *celbi* in opposition to *esfendi* is only applied to gentlemen who are not Mahomedans (particularly Europeans); Christian and Jewish ladies call their

husbands by this title; in one modern Armenian dialect the bride has to address the bridegroom's father as *celbi*. In its earlier general meaning of man of culture, gentleman, the word has only survived in proverbs such as *im celbi em celbi atî kim kâker* "Thou art a gentleman, I am a gentleman, so who shall carry the horse", or the Arabic *ḥadîṣ celbi ḥadîṣ ḥadîṣ waṣṣ ḥadîṣ* "The native of Aleppo is a gentleman, of Damascus a bird of Ul-men, of Egypt a thief" (Kerker, *Mittelsyrisch und Damascen*, Vienna, 1853, p. 95).

Ahmad Wafî Pâshâ has proposed an explanation of the words *celbi* and *celbi* in his *Lahij-i 'Othmanîya* (i. c.) which has been adopted by many European Orientalists also. In the time of Clogia-Şân the Tatars and Eastern Turks were first taught to read by Christian priests, i. e. monks acquainted with the art of writing; the Turks therefore at this time adopted besides the "Chinese" *tingri* and the Old Turkish *eglan*, the word *celbi* (Syr. *celbi*, Arab. *ḥadîṣ*) also, which properly means "crucifix" as a name for God; for the same reason the word *celbi*, properly "worshipper of the crucifix" retained the meaning of an "educated man, one able to write". The order in which Redhouse (*Lexicon*, p. 738) gives the various meanings of the word *celbi*, is based on this explanation: "originally, in Turkey" the word is said to have denoted a Christian priest or "worshipper of the crucifix", "next in Turkey" — a prince, "next", "a man of letters, a Muslim doctor of law and divinity", "later still" a "gentleman of the pen", "ultimately" a "non-Muslim gentleman".

With Ahmad Wafî Pâshâ, Baron Rosen (*Zephioti* etc., v. 303 et seq.; at 310 et seq.) supposes that the words *celbi* and *celbi* are to be regarded as relics of the missionary activity of Syrian (Nestorian) priests; but this activity must be placed in a much earlier period than the 15th century; both words were brought from Central Asia to the west by the Seldjûqs. He argues that the fact that neither of these words has as yet been found among the Turks of Central Asia or even among the Persian Seldjûqs, is of no importance as these areas have not yet been as fully investigated.

Another etymology was proposed by Baron Tiesenhausen in 1898 (*Zephioti* etc., xi. 307 et seq.). *Celbi* is, he suggests, to be derived from the Arabic root *ḥal* "to bring", "import" (whence *ḥalab*, "imported goods", *ḥalâ* "there"); the *celbi* as "officials able to write" are to be compared to the *ḥalab* (plur. *ḥalabî*) mentioned by Kâzî al-Dîn (*Die Chroniken der Stadt Mekka*, ed. Wustenfeld, iii. 188 et seq., 243), who formed a separate segment in Egypt in the Mamlûk period, skilled to reading, writing and all the arts, and were frequently called upon to fill the highest offices.

In learned circles this etymology has found no favour; as Baron Rosen remarks, such an explanation would only be justified if it were first proved that there was no connection between *celbi* and *celbi* "read".

In the article written some years later by P. Melissouraki (*Zephioti* etc., xv. 036 et seq.) this connection is expressly emphasized, but with the observation that both words must have come to the Turks in their present form, as such a transformation (with the addition of the termination *-i*) is not known in Turkish. The Christian origin of both words suggested by Ahmad Wafî is "probable but not more"; on the other hand, in opposition

to Baku, Ikon, &c. can safely be maintained that they first appeared not in Central Asia and not under the influence of Nestorian priests but among the Turks of Asia Minor, probably through the influence of their Christian neighbours.

W. Hamilton, again, (*Zephthi* etc., xviii & seq.) tries to prove that *celebi* has no connection with *celat* but is the Greek *καλλιγραφία* "writing, singing or writing well"; even among the Hellenic Greeks this word had taken the meaning of "educator, distinguished gentleman", with which meaning it was borrowed by the Turks.

The latest discussion of the origin of the words *celat* and *celebi* is by N. Mery (*Zephthi* etc., xv, pp. 27 seq.). His investigation is based on the use of the word *celat* among the Heratians of Asia Minor, emphasised by Laron Kahan and on the philological evidence adduced by Molanpudi that *celebi* could only be derived from *celat* by a non-Turkish people. According to N. Mery, the origin of both words is to be sought for in Kashmir where the words *celat* "eloquence" and *celat* "nobility" also "meaningful singer" are still to be found. The root *celat* is not Indian, but Mery has concluded a relic of the pre-Indo-European language of the Kards. This language belongs to a branch of the family called "Japhetic" by the author, closely connected with the Semitic family. The Kurdish *celat* goes back to a "South Japhetic" *celat* or *celat*, from which arose the Armenian *celat* and the Arabic *celat* in Semitic. All the meanings, in which the word *celat* was used by the Turks in Asia Minor in the 15th (16th) century, were already possessed by it previously among the Kards. Its original meaning was "follower of God" (*celat*); *celebi* was also the earlier name of the sect now known as Yezidi (from the Persian *yezi* "good"). Kurdish paganism has exercised an unmistakable influence on the religious life of the Muhammedans generally and particularly among the Heratians of Asia Minor; the Kurdish sect, widely disseminated in Persia at the present day under the name of *celat* or *celat*, may be mentioned as proof of this. The fact that there is at the present day a village called "Celabir" (the *celebi* not only near Sivas in Asia Minor but also in Russian Armenia (in the province of Jellakow), is also important.

Should the question again be taken up from the other side, it might perhaps be taken into account that in the Sufi poet Khamsi Anwar it is not the followers of God who are *celebi*, but *celebi* himself is the "beloved" in the Sufi sense. Perhaps also the word-formative ending *-bi* may not be so foreign to Turkish as Meliorfeld has supposed. Max van Nieuwen (in a private letter) has called the attention of the writer to the name Alpi (apparently for Alp "hero") among the Turkish tribes in Mesopotamia (vid. *vid.* = *vid.*—16th century) and to *Agghri*, probably identical with *Agghri* "sparrow-hawk" among the Saljaks and Karakizians (W. HARTHOFF).

CELEBI EFENDI, *celat* of Mawla Hanika (*Shah al-Din* [p. 4]).

CELEBI ZADE, *Asia Eryman* (1571, *Shah al-Islam* and Turkish historian, son of the Rifa'i-Muhammad Kibuk-Oglu, under the name by which he is known; he was first of all a judge and teacher of law, was later appointed librarian to the Ottoman library in place of Haghi (*1530*—*1571*). became successively *Kadi* in Bursa

(*1532*—*1539*), *Mudun* (*1537*—*1544*) and Constantinople (*1561*—*1568*) and finally *Shah al-Islam* (*1572*—*1578*), which office he held till his death eight months later. His history (printed at Constantinople in *1553*—*1560*) covers the period from *1535*—*1541* (*1542*—*1568*); his *Shah al-Islam* contains poems in praise of the Sultan Ahmed II and Mahmud I., occasional verses on the more important events of the period *1527*—*1553* (*1560*—*1563*) and 83 *ghazals*.

Biographies etc. Hammer-Purgstall, *Gesch. des Osman. Reiches* iv, 196; *Gesch. History of Ottoman Turkey*, iv, 74 & seq.

(C. L. HANKE.)

CENDERELI, the name of a family, the members of which in practically unbroken succession held the office of adviser — or to give its later title, *Grand Vizier* — to the first Ottoman Sultans. The statement that "the father and grandfather of the first Grand Vizier, is certainly a later fiction, the object of which is to show that the office of Grand Vizier was already in existence in the earliest period of the Ottoman kingdom. The statement of the other, still unimpeached Ottoman historians regarding the Cendereli family show considerable divergence. Our information regarding its origin and first representative Hasan Khosri Cendereli is particularly defective. Of its origin we know nothing besides the resulting *family* we find *generally*, *leader* and *leader* also in other *unimpeached* texts. Whether these facts show that the family belonged to the Cendereli tribe or merely that they originated in the district of this name (which still survives in the Wilayet of Adana) cannot as yet be ascertained. At any rate, the family, which was related to the Khosri Khosri, must have been so influential that it seemed advisable to the second Ottoman Sultan to attach the Cendereli to them as they did the family of Kine Michael and Kine, who also were not *unimpeached*. It may well be presumed that the Cendereli, in addition to their *unimpeached*, also possessed qualities of *unimpeached* in a high degree although their motto in this respect are not so fully recognised by the earlier historians.

Whether Hasan Khosri had already played an important part in the reign of Urtukhan and whether the foundation of the empire of Janissaries was his idea is quite as uncertain as the *unimpeached* of the history of the beginnings of the empire of Janissaries. The old anonymous writer, whom I mention as probable, makes his first appearance in the reign of Murad. According to him, it was not Hasan Khosri but Kara Rustem, the Heratian, who suggested the foundation of the corps of Janissaries. It seems certain that Khosri was *Kadi* of Adana in the reign of Urtukhan and under Murad, *Kadi* of Isak, thereafter of Bursa and finally became *Kadi* of *Adana*, before he was created a Pasha and as such took the name Khosri *ad-Din*. He is said to have died in 1586 when nearly a hundred years of age. Neither he nor his institutions found particular favour among the other *unimpeached* and still less did *unimpeached* and *unimpeached* 'Ali Pasha. The latter distinguished in the reign of Bayazid II. in whose various campaigns in Europe and Asia Minor he took an active part. He appears to have been, both as a statesman and as a soldier, the greatest of the Cendereli; but he was not too particular about the means he used to obtain the

ends. The older historians condemn many of his innovations; he is generally reproached with indulgence in unnatural vices and drunkenness and with having been responsible for the victory in which Bayazid also was addicted. After the battle of Angora (1402) he attached himself to Prince Süleiman and died soon after the latter's death in 1411.

His son Ibrahim joined Muhammad I. in the war against Musa and after Muhammad's death remained Grand Vizier for several years under Murad but had occasionally to share the authority with several other viziers. He was employed in the negotiations with the Byzantine Emperors. Thus arose the close relations between the Candell and the Byzantine court, which were to prove so fatal to Ibrahim's successor Khalil Paşa.

The latter spent most of his life under Murad II. and it was through him that Murad again took up the reins of government which he had yielded up in favour of Muhammad, when the incompetence of the young prince became apparent. Although Muhammad had a grudge against him on this account, he appointed him to the office of Grand Vizier after Murad's death. Khalil Paşa was accused of being friendly to the Greeks and of having taken bribes to prevent the conquest of Constantinople. Certain it is that Muhammad suspected him of this and therefore had him executed shortly after the taking of Constantinople in 1453.

With him the power and prestige of the family passed away, though his son Ibrahim Paşa was appointed Grand Vizier to Bayazid II. in 1497 and held the office till his death in 1499. After him we hear no more of the Candell.

Adighe (properly: *Adighe*, *Geschichte des Osmanischen Reiches* (Post 1834), vol. I., repeated references. The early Ottoman historians who have been utilized for this article are not yet published. (P. GÜZEL.)

CERKEK, a corruption of *Adighe* = *Adighe*, in Turkish has the special meanings of a quarter of an hour, or a coin, which is also called *Adighe* (q. v. p. 509). (E. GÜZEL.)

CERKEK, *Muhammad Paşa*, Grand Vizier of Turkey under Murad IV. in 1033-1034 = 1624. He was brought up in the Imperial Seraglio and after being *Adighe* of the Sultan was appointed Governor of Syria. As Grand Vizier he conducted the war against Abdes Muhammad Paşa (q. v. p. 6) and died, after defeating him, in Tokat 1034 (1624).

CERKESSES (CERKESSES) is a general name for a group of peoples who formerly inhabited the northwestern Caucasus (the Kuban territory) and a part of the east coast of the Black Sea from the Taurian peninsula southwards almost as far as Alaska. Of these tribes, which were much more numerous before the Russian conquest of this area, only insignificant remnants remain; most of them migrated to Turkey at either Asia Minor during the war or at the conclusion of it.

Like most peoples of the Caucasus, the Cerkesses have been known in Europe by very different names in the course of centuries. It is only recent research that has brought order into the chaos by giving us the names used by these peoples themselves. The ancient knew the Cerkesses as *Enkel*, *Kepelras*, *Zagros*, *Iozzi* etc. The name they themselves use is *Adighe* (*Adyghe*). The *Adighe*

people, according to Lullier, whom I follow here as the best authority on the Cerkesses, was divided into the following tribes:

- | | |
|-------------|-------------|
| 1. Abadighe | 6. Makhosh |
| 2. Shapung | 7. Kargul |
| 3. Nohovud | 8. Khatkhat |
| 4. Kubertai | 9. Makhakh |
| 5. Besenei | 10. Zjani |

In addition there were the *Abadighe*, *Abadighe*, and *Abadighe* (or *Adighe*) but they have long been either merged in other tribes or exterminated by war and pestilence.

The *Adighe* formerly dwelled on the north and south slopes of the western main chain i.e. the left bank of the Kuban and its tributaries and the coast of the Black Sea as far as the river Shakhie. The few remnants of them, that survive in the Caucasus, still dwell with Tatar tribes, Ossetes, Cossaks and Russians (chiefly Cossaks) as their neighbours practically in their ancient territory: the Kuban's main branch in Great and Little Kabarda (Terek territory), in the valley of the Malka, the Baken and the Cherk, the upper course of the Kuban, the Aksaut and the Zelenok, as well as on the right bank of the Terek, where it turns from a northwesterly to an easterly direction. The following tribes live in the south of the Kuban territory: *Abadighe*, *Abadighe*, *Abadighe*, *Shapung*, and *Nohovud*. There are also some Cerkesses on the Black Sea near Timpet: in all about 300,000.

With the *Abadighe* and the *Abadighe*, who have all emigrated, the Cerkesses form the northwestern branch of the Caucasian proper. Of all their languages only the Kabardin and the *Abadighe* have been made known to us, by Lopatin and Lullier; of the others we have only isolated and quite inadequate notices. The *Adighe* proper, according to Lopatin, may be divided into three dialects: 1. Lower *Adighe* (*Kikh*), to which Lullier has given the name "Common" Cerkessian, 2. Middle *Adighe* (*Bezeneyevian*) which forms a link between Lower *Adighe* and 3. Kabardin (Upper *Adighe*). The phonetic character of Cerkessian is unusually harsh; it has many gutturals and sharp hissing aspirates; the weak and strong glottal stop are found in almost every word and the broadened / does not contribute to the euphony of the language. Very emphatic sounds are even frequently found at the beginning of a word (*tu* = I, *du* = thou, *tu* = you).

The grammar is very peculiar and can hardly be fitted into any of the known schemes; certainly not easily into the latest, that of Fick's in his *Haupttypen der Sprachfamilien*. The prefixing of the pronominal root and the strong development of nouns and tenses are characteristic of the tribe; the relations of the nouns to one another which we express by declension or prepositions are expressed by elements quite loosely attached.

The Cerkesses had and, evidently speaking, still have only an oral literature. They had no alphabet; it was only after the Russian conquest that the Russian alphabet was adapted to their language; at the same time a modest attempt was made to found a written literature.

The folklore of the Cerkesses counts mainly of two classes, the *Narxanaga* (heroic legends) which they have in common with other Caucasian peoples, e.g. the Ossetes (it has not yet been ascertained which has borrowed it) and heroic-epic ballads.

We have very little reliable information on the history of the Cherkesses. Such as there is, has been handed down by oral tradition only, mainly in ballads and, as is natural among a people of such a warlike disposition, it has been interpreted in a very personal fashion. Schors-Bekmanis-Nogow has collected and published the historical traditions of his people (see *ibid.*); but there is not a word of it which can be taken without great caution. It is certain that the Cherkesses have frequently played a part in the current of events, north of the Caucasus, but what is true and what is fiction in their traditions, it is impossible to ascertain. The Wango-Kessians of the Taurakum principally on the Tannu peninsula, at any rate, came into contact with the Cherkesses at quite an early period (967).

As far as has yet been ascertained, the Cherkesses appear to be anthropologically a mixture of a fair northern race with a dark southern. Pauluchow regards the typical representatives of the race as subdolichcephalic (index 78-79), among whom there are more light than dark-eyed. But it has been stated, they are strongly mixed with a dark broad-headed stock. They are described as handsome men, though some observers say that the beauty for which the women are renowned, is over-rated. There is really some truth on both sides, for, as among all Caucasians, we find handsome individuals beside others who have no particular claims to beauty. The export of girls to Turkey which has been going on for centuries must naturally bring about a degeneration of the race.

In former times the Cherkesses practiced only cattle-rearing and, to a smaller extent, agriculture. Their horses were and still are famous. Their chief food — the fugality of the Cherkesses is proverbial — was a kind of potato made of millet. Meat was but little eaten and that only at sacrificial feasts. They made their own cloth and their *shurks* (felt cloaks), in addition to articles of leather which their women were fond of embellishing with gold and silver. Their houses, which at a rule contained only one room, were built in groups. There usually was a room attached to each house for guests.

Hospitality was and still is a sacred duty among the Cherkesses. Among the tribes with a feudal organization it was mainly the chiefs and nobles who had the right to exercise hospitality. The guest is even regarded as a member of his host's clan so far as the right of protection is concerned, so long as the latter does not give him over to another *domst* (host). The host is responsible with his life and property for the safety of his guest.

Some tribes in earlier times had a feudal organization. The Ninkand, Shapug and Abadzhik had no chiefs but only nobles while among the other tribes the government was in the hands of princes; these nobles, however, are said to have possessed more power than the princes of the other tribes. Under the influence of Islam which was brought by emigrants from Turkey, the feudal system has been broken down; as early as 1326, Hasan Pasha, the *Semaiar* of Asapa, took away the privileges of the nobles of the three tribes above mentioned.

The people were divided into four classes: 1. *Fikhs* (*Pghs*) princes, 2. *Uork* (*workhs*) nobles, 3. *Tlukol* who had to obey the *Fikhs* and *Uork* in certain respects, and 4. *Pghil* (*Pghil*) = *Serfs*. Islam with

its democratic tendencies struck the first blow at this organization. It is appropriately called the *Muhammadians* among the Cherkesses of his time "Radicals".

The Cherkesses are nominally Muhammadans; there are also a few members of the orthodox Church among them. Islam is not yet 200 years old among them. It was introduced by the *Fikhs* Shins and was first adopted by the *Kalagins*. At an earlier period Christianity appears to have been propagated among them; at least the ruins of churches and certain customs point in that direction. Neither of the religions professed by them are deeply rooted, any more than among the *Ossetes*. The old heathen religion retained the strongest hold among them, as is still the case to-day among the *Ossetes*. The following gods were worshipped: *Sorokis*, the protector of crops, whose feast was held in December practically at our Christmas; *Akhu*, the protector of cattle; *Zeigut* who watched over their rich and military enterprises; *Meslikh*, the god of husbandry and the chase, who rides on a boat with golden blades; *Vemlah*, the patron of shepherds; *Tlepah*, the god of smiths — smiths are usually taken in his name —; *Ehepegash* (*he-pemph*), *Peegash* (*the* *water-symph*) worshipped for rain; *Kish* (*is* *gash*), the protector of gardens; *Tlukemlah* and *Shodoris*, who are mentioned in prayer after *Sorokis* (are they perhaps merely secondary presentations of *Sorokis* himself?); *Khakastash* who is a kind of patron god of the lion among the *Ninkand*; and the *Shapug*, but also protects the oxen used in ploughing; *Kodosh* is represented in the form of a fish and resembles, I think, *Uchisraue*. *Thahaleit* and *Thakulighe* correspond somewhat to the *Lares* and *Favores*; *Merkem*, protectress of the bees; she is also represented as mother of the *Osset* God (obviously a transmigration of a pre-Christian deity under Christian influence); *Imreofestivals* also are dedicated to her; *Shilik*, the god of thunder and tempest, to whom those storms lightning answered, and *Iha*, the supreme god.

The Cherkesses had neither temples nor churches. Prayers were offered up and sacrifices made in sacred groves of winter-saved-trees. Nor was there any proper priestly class; the sacrificial ceremonies were carried out by an old man elected for life for this duty.

Justice was formerly administered according to traditional custom (*Shaf*). There was no separate caste of judges, at least not among the *Shapug* and *Ninkand*. A declaration of innocence on oath used to be accepted; but as perjury was not uncommon, the whole structure of this system of customary law fell to pieces. Society required blood-revengeance for murder as an absolute right and duty; it was however also possible, though difficult, for the murderer to escape blood-revengeance by payment of a fine; the fines prescribed were fixed by the social position of the injured individual. The absence of any limitation of time after which vengeance could not be taken, gave rise to endless vendettas.

A wife was obtained by purchase. If the consent of the bride's parents could not be obtained she was usually carried off by force, as was also done when the bride herself was unwilling. A pretended carrying off of the bride by force still forms an essential part of the marriage ceremony.

As a rule a newly married pair do not appear

in public with one another till after the birth of the first child. Their code of sexual morality is a very strict one. On the wedding-nights the bridegroom opens with his *dingel* the leather coverlet of the bride which she has worn since her childhood without ever taking it off.

One of the most striking features of Caucasian life is the *Atalik*, i. e. the custom of handing children over to strangers immediately after birth to be brought up (the boys till their 17th—18th year and girls till their 15th—16th year). The foster-parents were treated with great reverence, and held a position almost superior to the actual parents. This custom created a kind of foster-kinship, which contributed considerably to the unity of the Caucasian tribes. A fugitive who succeeded in touching with his lips the breast of the mother in the house of a stranger, thus became a member of the family and the head of the house was responsible for his safety. This is probably a point from which one may understand and explain the social and family relations of the Caucasian peoples.

Another factor which contributed to the unification of the Caucasians was the system of swearing brotherhood, in which the touching the breast of a woman also played the main part; a man universally held in high esteem stepped forward from the one group of those swearing brotherhood while a woman came forward from the other group and offered the man her breast; the ceremony was completed by an oath in the *horan*.

The Caucasians were to many ways the teachers of their neighbours. Not only was the musculline dress (sheepskin cap, felt cloak, Cossack's t. overcoat) imitated, but in part also (by the Afghans and Chinese for example) the femaline, i. e. the corset, chemise, trousers, upper garment with a deep opening on the breast, girdle and the high cylindrical hat. This dress is now rapidly disappearing as everything is in a state of transition. It may also be supposed that the social organization and particularly the social hierarchy of the Caucasians exercised a deep influence on their neighbours.

There are also a series of valuable essays in the Russian Ethnographical Review, in the publications of the Caucasian section of the Imperial Russian Geographical Society of Tiflis and in the work describing the localities

and tribes of the Caucasus (Tiflis) in vol. vii. of the latter there is a short Caucasian grammar with glossaries (in Russian). (A. LEBEL.)

CESHME, a Persian word meaning "spring, fountain" which has passed into Turkish with the same value. It is the name of a maritime town in Asia Minor with a wide and important harbour on the Mediterranean coast, at the entrance to the Gulf of the same name, at the north-western extremity of a peninsula opposite the island of Chios. It is the chief town of a kaza in the sanjak of Smyrna, Wilayet Aiolin. The town has 3530 inhabitants of whom 2000 are Mohammedans and 1500 Orthodox Greeks; there are 5 mosques, 14 Greek churches and 1 synagogue. The present town, which is quite modern, occupies the site of the ancient harbour of Kythrae, now called Kythri. There are hot-springs at Hissar.

The Russian fleet of nine ships of the line and seven frigates, divided into three squadrons commanded by Spiridoff, Alexei Orlov and Phipposoff, which had sailed from Kronstadt to aid the revolted Melasina, attacked the Turkish fleet here, consisting of two corvettes, fifteen galleons, 400 *ghalib* and eight galleys, commanded by Hajrullah-Pasha Hajrullah al-Ina and Captain Djemal al-Han. The Russian and Turkish ships were both caught fire at the same moment and those of the crew, who could, saved themselves by swimming (11th July 1, 1837—5th July 1870). The commander of the Turkish fleet was set on fire the following night. The defeat of the Turks at Ceshme was the forerunner of the Peace of Kuthahije.

CEUTA, a maritime town in Morocco on the Strait of Gibraltar, 10 miles south of Gibraltar, 40 northwest of Tetuan and 140 north of Fes (Fes), with 6000 inhabitants; lat. 35° 54' N. long. 5° 18' W. (Greenwich). It is fortified and is the most important of the Spanish presidios.

Ceuta is built on a peninsula running from west to east terminating in a rocky *lyebel* (lyebel al-Mine) surmounted by a lighthouse. The peninsula itself is dominated in the centre by the Monte del Hacho which rises to a height of 600 feet. The town is divided into two parts, the old town, "Ciudad Antigua" which lies in the bottom of the ravines and the modern town, Almina, rising like the head of an amphitheatre up the slopes of Monte del Hacho. Beyond the minims the land rises to form a large plateau cut up by ravines, which in the north descends abruptly to the sea by steep cliffs. This is the *Sierra Blanca* sloping on the inner spurs of the mass of the Anglora, called by the Spaniards Sierra Bullones and by the Moors *lyebel* al-Mine or *lyebel* al-Mine. There are two bays, one on the north and the other on the south of the peninsula: the first is fairly large but badly sheltered; the second is smaller but well protected from the winds from the open sea and offers a safe anchorage to ships. In spite of these natural advantages, Ceuta plays quite a secondary part as a commercial town and looks far below Tangier or even Melilla. On the other hand it is a strategic position of the highest importance, equal, if not superior, to Gibraltar.

Ceuta is called *Sakus* (سكس) by the Arab historians and geographers. The etymology of this name is uncertain. The author of the *Haydn* (i. 310) derives it from *Sakt*, a descendant of Shem, son of Noah: al-Hirfi (ed. Dory & de Goeje, p. 199) connects it with the Latin word *caput* on account of the situation of the town, on a peninsula that is by the sea on all sides except the east. The most probable explanation, however, is that which derives the word *Ceuta* from *Septem* (seventy), the name given by the Romans to the heights on which the town is built.

The position of the peninsula of Ceuta at the entrance to the Mediterranean had early attracted the attention of the Phoenicians who founded the trading settlement of *Agr* (here). After the Carthaginians, the Romans who succeeded to their heritage established themselves here in their turn and founded the colony of *Iulia Tugrida*. In the 6th century of the Christian era, the town was taken by the Vandals, then retaken by the Byzantines who surrounded it with fortifications in the time of Justinian and gave it the name of *Sepia*. At the time of the Arab invasion Ceuta was governed by Count Julian who had succeeded in making himself practically independent there. When 'Ubayd Allah was creating Ceuta after his victorious march through the Maghrib, Julian came out to meet him bearing a magnificent present, promised to be his tributary and obtained confirmation of his authority from the Arab leader (al-Bakri, *Descriptio de l'Afrique*, *travail de Sane*, p. 236). According to the same author, it was Julian who furnished Tariq and his companions with the means of crossing to Spain. A few years later the Arabs were allowed to enter the town and settle there.

The Khariji revolt in the middle of the second (8th) century almost brought about the ruin of Ceuta. The Berbers of Tangier invaded the town and drove out the Arabs. 'Ceuta,' says al-Bakri 'remained abandoned and in ruins with no inhabitants save wild beasts.' After the death of al-Bakri, Bulki and his companions who had taken refuge there, were finally persuaded by the Berbers to re-establish themselves as part of the Ifrasiy Kingdom. It was governed by Muhammad, son and successor of al-Bakri, and al-Bakri along with Tangier, Tetuan and others; it next passed to al-Bakri's brother Omar and then to the latter's son 'Abd al-Rahman over the Ifrasiy Kingdom. In the 10th and 11th century, Ceuta though nominally part of this kingdom was ruled by a Berber dynasty founded by a certain *Minjakh* (Minkah), according to al-Bakri. This man, who belonged to the *Qusaym* tribe, adopted Islam, established himself in Ceuta and had himself appointed lord of Ceuta by the overlord of Tetuan and the town received the name of *Minjakhia*. For a century it was ruled by his descendants 'Ism, *Madjib* b. 'Ism and lastly al-Madhi. *Madjib*. The population of the town increased at this period by the influx of Spanish refugees from the neighbourhood of Xerez. When 'Abd al-Rahman al-Nasir, Caliph of Cordova, took Ceuta in 319 (931), al-Bakri was forced to abdicate.

From this period on, Ceuta was a bone of contention between the Spanish Moors and the rulers of the Maghrib. The *Umayyad* historians told it and, as it was the gateway to Africa, they made all efforts to retain it. 'Abd al-Rahman al-

Nasir surrounded it by a stone wall of great strength; another Caliph built fortifications on the plains of al-Siba and tried, but without success, to transplant the inhabitants thither. A large garrison was quartered in it. These precautions proved by no means unnecessary. In 371 (979) Bulukkin b. Ziti (q. v. p. 792) advanced on Ceuta but, seeing the immense supplies laid in by the Umayyads, gave up all thought of undertaking a siege of it. The Hammudid Idria, governor of Tangier for his brother Yahya, was once victorious and succeeded in taking the town. It was won back by the Umayyads but finally lost to them when the Almoravids seized it. Rostaged by al-Bakri b. 'Ubayd Allah, Ceuta had to surrender after a valiant resistance. The governor *Diya' al-Dawla* was put to death by order of the victor in 470 (1083-1084).

The Almohads succeeded the Almoravids in Ceuta. In 1140 'Abd al-Mu'min had used to seize the town, but had been repulsed by 'Ubayd Allah. In 1145, the Almohads submitted voluntarily and received an Almohad governor. They rose the next year against their new masters, killed the governor and appointed an Almoravid (al-Bakri b. 'Ubayd Allah) as their ruler. The rebellion was quickly put down. 'Abd al-Mu'min regained Ceuta and placed one of his sons, al-Bakri b. 'Ubayd Allah, in command of it. The Caliph 'Abd al-Mu'min afterwards gave this important post to his son-in-law 'Abd al-Bakri. The turbulent spirit of the people of Ceuta frequently manifested itself in revolts against Almohad authority. In the reign of al-Mu'min, his brother 'Abd al-Mu'min had himself proclaimed Caliph at Ceuta under the name of *Ma'ad*. This made an alliance with the Emir of Morocco, 'Im al-Mu'min, who represented before the legitimate Caliph the cause of *Ma'ad* (1154). The Caliph al-Mu'min made an alliance with the Christian King of Castile to overcome the rebels. A Genoese fleet of 70 ships blockaded Ceuta without being able to take it. Finally, only through the kindness of its inhabitants that Ceuta was returned to the Almohads; they remained against 'Im al-Mu'min, chose out his representative and opened the gates to the Mohammedan forces.

In spite of these vicissitudes, Ceuta appears to have enjoyed considerable prosperity during the 10th and 11th centuries. The town, properly speaking, only occupied a portion of the peninsula, the remainder being covered with gardens, vineyards and sugar plantations (al-Bakri b. 'Ubayd Allah). There could still be seen within the walls remains of ancient monuments, notably a great church and public baths. The population was composed of Arabs of the tribe of *Qusaym* and of Berbers who had come originally from the eastern of Africa and Asia. Its trade in fruit and in the fish caught in the surrounding sea brought it considerable wealth. 'There is no coast more productive', says al-Bakri 'where a hundred kinds of fish are found there'. The spongy-hellum is particularly important. According to this geographer, coral was also abundant in these waters, worked, polished, rounded and pierced in the bazaars of Ceuta. It was exported to various places and the other towns of the Sudan. Their mercantile pursuits did not however prevent the inhabitants from the pursuit of learning. 'Ceuta,' says al-Bakri, 'has always been one of those places where the sciences have taken up their abode'.

The decline of the Almohad empire brought a

renewed period of disorder for Ceuta. The inhabitants, after recognising the authority of the Moors for a time, submitted to the Marinids. Their allegiance however was neither faithful and on several occasions they threw off the authority of the sovereigns of Fez. Thus we find them in the reign of the Marinid Abu Yusuf checking al-Azafi ruler, he finally became master of the town in condition of paying tribute to the Sultan of Morocco (1273) but was overthrown by the al-Aghour, king of Granada. The Spanish prince on becoming master of the town encouraged the rebellion of Yijima Abu 'Ala, a Marinid pretender, who took up arms against the Sultan Abu Thabit and on being defeated by him, took refuge in Ceuta (1301 A.D.). Abu Thabit began the siege of the town but before he walls it was finally taken by his successor Abu Sa'id to whom Don Jayme of Aragon had sent 50 ships and 1000 horsemen. There was another attempt in 1316 by the citizens of Ceuta to restore 'Azafi to power. This was put down with great rigor by the Sultan Abu Sa'id, who a fortress called Afrag on the highest point of the peninsula to keep the inhabitants under control. A son of Abu 'Isa, named Mubal, however landed at Ceuta, and married a Fez where he was proclaimed Sultan. The king of Granada who had supported this pretender seized the opportunity to place a garrison in Ceuta. A Marinid army blockaded the town but was scattered by Abu 'Abbas, a new pretender. The latter finally became lord of Morocco and did not hand Ceuta over to the king of Granada (1387 A.D.).

The Marinids did not long hold Ceuta, which they had thus won back from the Moors of Spain. They were soon supplanted by the Christians. In 1415, João I, King of Portugal, sent an expedition against Ceuta. The Christian army after being scattered on the voyage by a storm, succeeded in entering the harbour on the 14th August. The Portuguese took the town in spite of the vigorous resistance of Kaid Sa'id who commanded it, and installed a garrison there under Don Pedro de Meneses. In 1418, Ceuta was established a bishopric. As a result of their failure before Tangier (1437) however, the Portuguese signed a treaty by which they agreed to restore Ceuta to the Mohammedans. This agreement was however ratified by the Sultan and the place remained in the power of the Portuguese as the price of the liberty of the infant Don Ferdinand who had been left as a hostage and died in captivity.

The annexation of Portugal in 1580 by Philip II transferred Ceuta to the Spaniards. They retained it after Portugal had regained its independence and had their rights to it recognised by the treaty of Lisbon (1668). It was only with the greatest difficulty that they were able to maintain their position there. They had to resist the attacks of Mulay Isma'il who had set himself to drive the Christians out of all the points they occupied on the Moroccan coast. After informing the governor Don Francisco Vero of his intention of reconquering Ceuta, the Sultan sent him to the town with an army of 30,000 men. He laid out a fortified camp and blockaded the place closely; the garrison consisted only of 2000 infantry, 50 cavalry and 120 ecclesiastics. The siege lasted 27 years (1691—1718). Occupied with the war of the Spanish Succession, the Spaniards were too busy to attend to the course of events in Africa

and did nothing to help the beleaguered city. In the meanwhile, the English who had taken Gibraltar in 1705, had tried without success to occupy Ceuta in order to hold both keys of the Strait. Finally in 1721 the Marquis de Lérma was sent to Africa with reinforcements, dislodged the Moors from their positions and drove them back to the Sierra Bullones. Years later the Sheriff Mulay 'Abd made another attempt to take Ceuta. The army which he sent, at the suggestion, it is said, of the renegade Ripperda, was put to flight.

The Spaniards thus remained in possession of the town, but throughout the eighteenth century they were constantly attacked by the neighbouring tribes. To put an end to this state of affairs, the Hispano-Moroccan treaty of 1782 and 1799 granted to Spain a strip of land around the town, a measure which did not however prevent further depredations by the natives which the Moors were neither willing nor able to prevent. Napoleon's intervention in Spain seemed at first to deprive the Spaniards of Ceuta. The English, fearing that the Sultan would seek to profit by the occasion to retake Ceuta and considering this town "ought to be preserved", occupied it from 1810 to 1814 when they restored it to Spain. The Spaniards, replaced in possession of Ceuta, continued to suffer from the aggressions of the native tribes, particularly the Audjera. The treaty of Larache (1845) did not succeed in improving the situation. Hostilities continued and the destruction by the Audjera of the defences erected by the Spaniards near the town brought about the Hispano-Moroccan war of 1859-1860. It was at Ceuta that the Spanish troops were concentrated before marching on Tetuan and it was around Ceuta (on the Spanish plateau) that the first fighting in the campaign took place (August—November 1859). By the terms of the Peace of Tetuan, Spain received an extension of the territory of Ceuta, which now stretched from the sea to the ravine of Audjera in the Sierra Bullones, a distance of about 7 miles.

CEYLON, an island off the southern extremity of the Indian peninsula, situated between 5° 55' and 9° 55' N. and between 79° 41' and 81° 54' E., with an area of 25,481 square miles. The population in 1911 amounted to 3,592,397 of whom 276,361 were Mohammedans; of these the majority (266,454) are styled Moors or Moomen, and either claim descent from Arab immigrants who intermarried with the women of the country and made converts from among the inhabitants, or are Indian traders who visit the island from the peninsula; the rest are Malays, chiefly descended from soldiers and labourers introduced into the island by the Dutch from Java and Sumatra; there are also a few Afghans and other Mohammedan settlers.

Ceylon was early known to the Arabs on account of its pearl-fisheries and trade in precious stones and spices, and Arab merchants had formed commercial establishments there centuries before the rise of Islam. Local tradition represents the first Muslim settlement to have been made by some Arabs who were sent into banishment by Mahammad as a punishment for their cowardice

Java," he evidently means that the Indian Ocean is divided into an Eastern and a Western section, the first of which ends on the one side at the Straits of Sumatra (believed that there spans of course will be water, but this is no longer the case of the Indians) and on the other at China, which is a vast expanse of land stretching to the north to the land of Tibet to the north and to the south to the land of Yedjidd and Medjidd to the south to seventh degree. Characteristics of the Bay's view is also the statement (p. 88, 89, 90, 91, 92, 93) that the sea on which one sails from Bagra to China is one sea and one reaching to China, in which there are also islands; it was however thought that there were really seven seas, each of which had its characteristic features, such as different winds, different tides, different colours and different climates; on this opinion of Mas'udi, l. 323 et seq., where it is stated that the sea is one but is to be navigated in different ways in different parts (this point is not raised on p. 88, 89, 90, 91, 92, 93, where probably *al-Bihar* should be read for *al-Bihar*). The Arabs unconsciously make another land adjoin China, Japan and Korea; he says p. 82, 83, 84: "Every Muslim who enters a land at the end of China, which is called al-Sila and where there is much gold, besides there and never again from it," etc. or also the independence of Muslims who had come to al-Sila.

Mas'udi is better informed though there are many confirmations in his account of the Chinese (p. 32 et seq.). It is in the main based on a knowledge of the maritime situation of China; according to the general view (p. 31 et seq.) the south China is particularly associated with Yedjidd and Medjidd and the seventh with the *Yas* (p. 31) and the Chinese; on the other hand we find the other view manifesting itself on p. 25, 26, 27 et seq., where China and Japan are regarded the last inhabited areas in the world "the farthest outposts of civilisation in the east to the frontier of China and al-Sila (Japan) up to where they end in the wall of Yedjidd and Medjidd, which Alexander built, and the mountains behind, through the ravines of which the wall runs; Yedjidd and Medjidd used to descend down on the plain from there; the beginning of this wall is outside the habitable region in the seventh degree. It then takes a southward direction and runs right along till it finally reaches the Dark Ocean" (The names of the islands wall against the eastern barbarians have been collected by al-Gueje in his *De Afros* and *De Afros*). Mas'udi also states that India and China are one another: "Further on ships of the Muslims who on the voyage thither and to Djidda and al-Balcan are attacked by the pirates of the land of Sind, called *Alind*, or *Alind*, which are like the *Alind* of the *Alind*" (p. 35, 36 et seq.). Mas'udi gives more information about China in his *Al-Bihar* *al-Bihar* (p. 336-347, rewritten 345-350). There was no longer a direct communication by sea in his time but ships came from either side of Galla (Pout de Galla) which was almost the halfway point, from which Chinese ships sailed to Shanshi (Canton). "In other times it was otherwise, when the Chinese ships sailed to the land of China, to Sial, the coast of Persia and Thibet, to Sial and Bagra and ships from these places likewise traded directly with China: it was only after justice could no longer be relied on and the above described state of affairs in China

had come about that they began to meet at this intermediate point" (l. 308). The journey was actually undertaken by this route by a contemporary of Mas'udi's, a merchant of Samarkand, whose experiences Mas'udi gives (l. 307-312); while a Koranist in the time of the Slave Revolt in Bagra (869-879) sailed from Bagra to India, thence proceeded partly by water and partly by land to China and landed at Khabul from which he visited the Emperor in his residence Khaman (l. 312). In l. 303, Khabul (this is the correct reading in place of the *al-Bihar* of the text) is also

mentioned as an important commercial town up to which ships from Bagra, Thibet, Sial, the coast of India, the islands of al-Sila and Sial sail from the mouth of the river, come in at seven days' journey distant. At an earlier period Chinese ships came as far as Nagaf, at least so says Mas'udi l. 226: "The great bulk of the water of the Euphrates used to flow into the land of Yedjidd; the ancient bed called *al-Bihar*, on which was fought the battle of Badkuba, is still visible; it flowed into the Arabian Sea like the Indian Ocean; it is evidently the *al-Bihar* which is referred to; in these days the sea came up to the place which is now known as al-Nagaf and thence from India and China came thither, destined for the King of Yedjidd." (p. 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000).

The route leading to China has been most fully described by the oldest Arab geographers who has written to me, the Khondakib, who held the office of chief superintendent of roads (l. 233-244) in the *Al-Bihar* of Mas'udi (l. 233-244) composed in 232-246. According to him relations with China were principally maintained by sea and the goods of South China by irregularly through. After giving the route of the traveller to China from Bagra to al-Sila on the coast, three days' journey from Khabul, he continues (p. 69, 70, 71): "From al-Sila to Lakh, which is the first harbour in China, is 100 farsakhs (1 f. = 4 miles) by land and water. . . . from Lakh to Khabul, which is the largest port, is a journey of four days by sea and of twenty days by land. . . . from Khabul to Khabul is an eight days' journey. . . . from Khabul to Khabul is a journey of twenty days. . . . every harbour of China has a large river which the ships sail into; there is salt and flow of the tide there. . . . The length of China along the coast from Amul to the end

of the land is a journey of ten months. There are 300 flourishing towns in China, ninety of which are particularly renowned: the [northern] frontier of China runs from the sea to Tibet and the land of the Turks, in the west to India; in the east of China is the land of Wakhan, rich in gold . . . (p. 70, *et seq.*). At the end of China opposite Kham, there are many mountains and many kings; this is the land of al-Sila; there there is much gold; the Muslims who enter this land arrive in it on account of its attractions (cf. the account of the Rus in p. 241^a above); it is not known what lies beyond". The whole comes from Ceylon to Hanks is discussed by Sprenger in his *Pers. and Hind. Geogr.* p. 52 *et seq.* (on the route to Ceylon it should be noted that "the harbour between Omka and China" is not a place called Kila, to be identified with the town of Malakka, but Galla, which still survives in Point de Galle, cf. p. 241^a above). Al-Hudhili (Tabari) he identifies with Reinard and Pombel with Tabari i.e. South Cochinchina and leaves Ikhin at the mouth of the Songkoi. As to the latter part of the route, all has been altered by the critical edition of the Khawadhihi (*DMG. Geogr. Arab.* vi.). The following points are certain: Kham, which is undoubtedly Canton, and Kham, in which we readily recognize the Kham of the Sogdians; this latter is clearly Hang-chow (that name formerly appeared as Kham and later as Kham is not doubted); for the corruption of Kham to Kham (as) we may perhaps compare the so far done in my *Chinese-Geographical Glossar*, p. 285). I would identify Kham with Canton, and suppose Kham to be a corrupt name for Kham; this would agree with the distance and we would then have evidence of the existence of Kham, afterwards as important, in this period (cf. p. 241^a).

Al-Hudhili was however also acquainted with the land routes to China. He only briefly describes the route followed by the Jewish merchants of Kham in connection with the route followed by them by sea from the land of the Franks (Mediterranean) — al-Farans — carrying their goods on their backs over the Indians to al-Kalim — Suez (p. 155, *et seq.*) "beyond Rum into the land of the Slavs, then to Kham, the capital of the Khazars, then across the Caspian Sea, then to Balkh and Transoxania, then to the west (i.e. west — land) of the Toghughus and thence to China". He is much more detailed in describing the roads which lead from Transoxania to the east, and gives a vivid picture of a journey by the main route from the lands of the west to the east (p. 178 *et seq.*). At the ford on the upper course of the Oxus where a caravan of the Pamirs from Tokharistan (Uzbekistan) the Turks used to wait on the Pamir side and watch for foreign merchants appearing and signalling to them on the summit of the mountains opposite; they crossed the river and brought back the strangers and their goods to let them on their journey again to China or to India; he describes in thrilling fashion the skill with which these mountain Turks travelled through the great deserts of rocks where no path was visible; this agrees pretty closely with what modern travellers tell us about the Pamir districts between and Shagala, which is the locality referred to by the Khawadhihi; even the name has survived, for we may easily recognize Shagala in the *Siddiq* of the Khaw-

adhihi (p. 179) who calls the Turks of this district *Shiqin* (p. 178, 179). The Khawadhihi also gives the name of the district in the form *Shiqin* (p. 37, 173). Perhaps we also have al-Shagala in the *al-Siddiq* of Ibn al-Farisi, p. 290 (the Geogr. proposed to read *al-Siddiq*, *DMG. Geogr. Arab.* iv. 178). Al-Hudhili mentions a *Shiqin* *Shiq* as the prince of Shagala (*India*, p. 101, a). The Chinese transcribe the name *Shiqin*, see Yule in the *Journal of the Roy. Asi. Soc.* vi. 97, cf. 113). When the Khawadhihi calls the *Shiqin* Turks (p. 178, 179) *al-Turk al-Shiqin* *ghawwawana Shiqin*, he is using the word in a very general sense; the inhabitants of Shagala as well as of the whole of the rest of Tokharistan were certainly Atyans and probably spoke the same dialect (*Shiqin*) as they do at the present day. He was probably dealing with the road over the Pamir Pass and the Wakhan Pass, on which see my *Chinese-Geographical Glossar*, p. 67 *et seq.*

The Khawadhihi's account makes it quite clear how distinctly the difference between China and the land of the Turks was understood in this time. This is all the more remarkable, as in his time the influence of China in the Turkish lands between China proper and the Pamirs was not inconceivable; the Khakhan and the lesser Turkish princes were regarded by China as vassals and they certainly never hesitated to put themselves under the protection of the Chinese Emperor (on this word which Neuman first introduced as *Khakhan* = Son of Heaven *Khakhan*, see Yule, *Journal*, i. 111, 112, 113) when it was to their advantage, for example, when they had to defend themselves against vigorous attacks from the Muslim world. Probably also the Turkish princes used occasionally to pose as Chinese to the Muslims. Through intercourse with the harbours of China, the Muslims were well enough acquainted with the characteristics of the Chinese to understand the differences between them and the Turks. The division of the earth into four continents by the Khawadhihi is characteristic (p. 155). Asia (Europe), Kham (Africa), Ikhthya (Australia) with Thama, Vomen, Siml, India and China, and Ikhthya (Scotia) with Armenia, Kham, the land of the Turks and the land of the Khazars, which cuts up Asia in a peculiar fashion.

There are also other important sources of information on the connections by sea, namely the accounts collected by Abu Zaid al-Sirafi in his *At-Tahqiq al-Farisi* (the older literature on the subject is discussed by Yule in his *Journal and the Way Thither*, i. 111). Though the first part of this work is merely a repetition of the notes compiled in 237 (851) by Sulaiman the merchant (Reinard, R. 61) supplemental from Abu Zaid's own materials, the second part deals with the changes that had taken place in commerce by sea, in their relation to history and gives the narrative of the *Kham* the *Wahh* (of the clan of *Wahh*). This narrative is of no geographical importance: only two towns are fully dealt with, viz. Kham, which has just been discussed above and shown to be Canton, and Kham (— *Kham* "Emperor" + *lang* "court") the capital of the kingdom, Shagala, which the *Wahh* visited. In the *Relations*, Kham is the great centre of trade between the Arabs (the word is of course not to be taken literally, but means Muslims generally) and the Chinese on account of the frequent fire and

shipwrecked, the goods exposed were not numerous, however; trade was also seriously hampered by piracy (ib. 10); Salimān is quoted as authoritatively for the statement that a Muslim was appointed law-giver to the Muhammedan colony by the King of China; this judge was also teacher and prayed for the Caliph. His decisions were universally respected (ib. 13). The voyage from the Gulf to Kān-fu was made in fresh water (ib. 19); the Chinese governor of Kān-fu bore the title *Shih* (ib. 37); the revolt of the Hsiang-shu was a disastrous period in the history of Kān-fu; he attacked the town which lay in the interior, a few days' journey from the coast, on a large river; this was in 264=875, after the capture of the town by the rebels over 100,000 souls perished from among the foreigners alone, Muslims, Christians, Jews and Magians (ib. 63 et seq.); it was possibly this blow to Kān-fu which brought Ch'ien-chang, the commercial town to the north, to the front. Lastly Abu Zaid tells of a nation of Khorāsān who came with arms to Kān-fu and from there visited the capital Khamdan, then two months' journey distant (ib. 206 et seq.).

It is not till a later period that the report of Zaitū appears in Arabic literature, probably for the first time in the Sayid al-Bihar statements Abu 'l-Fida' (p. 305, *Travel*, ii. 124) has utilized along with those of one who had been there, probably a fellow countryman and resident. It is next described by Ibn Hujūm (p. 268 et seq.), who first stepped ashore on Chinese soil at Zaitū and made it his centre for his journeys into the interior. The identity of Zaitū with Ch'uan-chang-shu was suggested long ago by Marshall and Degurgens and established in the learned note in Chiao Tsai-li of the Yule-Cordier edition of Marco Polo (*Book of Ser Marco Polo*, ii. 237 et seq.). We now have a record in stone from Ch'uan-chang, which proves the existence of a mosque there in 1010, if we may trust the inscription of 1310 which professes to be a renewal of an older one of 1010 (see van der Haeghe *Travels*, p. 211 (1911) p. 704 et seq.). Abu 'l-Fida's inference as to Zaitū being "identical with Shindjī" (note the *h*, which appears to be the *h* of *shindjī*) points to the fact that the town was known in the West in his time by its Chinese name (of which I suppose Zaitū to be a corruption; *zai* or *ai* is a corruption of *shindjī*, and *shu* added, thus making a word familiar to every Muslim from Kor'ān, rev. 13). I must point out here that Abu 'l-Fida's other statements on China show some confusion; he mixes up Canton and Hangchow-fu, as his "Khaman", identical with Kān-fu (read Kān-fu) shows (see above p. 842). He only mentions Khamdan and Kān-fu in his "notes" and is not aware that his Kān-fu (ib. 123 et seq.) confuses two quite different towns, viz.: Kān-fu in the north (= Pekin; cf. Ibn Hujūm's account on p. 845 below) and Canton in the south, which should really be called Kān-fu.

Lastly must be mentioned the description of the land route connecting Transoxiana with China which is given in a work by Abū Sa'īd 'Abī al-Jalīl Ibn Jubāir Gāzī (Marquart, *Srednaya Azia*, written Gāzī, but see Rieu, *Cor. Pers. Brit. Mus.* 1072, and Raverty, *Persian Empire*, p. 901), the importance of which has been recognized by Barthold who has published a portion of this author's valuable *Zaim al-Akhbar* (composed about

1050 A.D.) in *Dietrich's Geschichte der Srednaya Azia*, 1893-1894, St. Petersburg, 1897). Gāzī's description of China occupies pp. 92, 17-941. The most important part is the itinerary from Tūfan to Khamdan, pp. 94-100: Tūfan (L. o. Tūfan-Kar Khay) in the land of the Toghuighs to Khamdan, 8 days; at Bagh Shūr (we may recognise in Bagh the Persian *bagh* "garden"; the word *shūr* is probably identical with the *shūr* which frequently appears in Turkish names) the river has to be crossed by boat: thence it is 7 days' journey across the steppes, which has springs and pasture, to Shān (Shachou, on maps usually Sa-tchou, in Szechuan, *Reise in Westchina*, ii. 159, note 5, "Scha-tschou" (= Shachou) with the remark that the town was called Tūn-shen (Tung-huan) down to the beginning of the 11th century: at the present day the road goes by An-shih, N.E. of Shachou; thence three days to a rocky desert (steppes); thence 7 days to Sukhān (= Shachou); the *shūr* is a corruption of an older pronunciation which we find in the form *shūr* (4 days from Khamdan = Khamdan) in Abu 'l-Fida' (p. 366, *Travel*, ii. 225); thence 3 days to Khamdan (= Khamdan, the modern capital of Western Kansu, *Khamdan* in Abu 'l-Fida'); thence 3 days to Khamdan; then in 15 days to a river, which he called Kīn (or Kīn); and thence to be crossed by boat. From Bagh Shūr to Khamdan, which is the capital of China, is a month's journey (this total does not agree with the preceding figures even if we suppose that the last river-crossing was at Khamdan, i.e. Shingau; for the total 28 days travelled is 43); there are good rest-houses at the stations on the road. There is still much that is not clear in this record; but some stations can be identified. This road was certainly the main route by land from China to the west. It appears that the Mongol Emperors when setting out from their residence at Khamdan to the lands to the west, used to take the road to the north of the T'ien-Shan Mts. High-altai (which can no longer be identified with Urumi but is to be located 4 miles north of Tūfan-shu, see Barthold in the article *Urumi*, p. 728), Almalyk (Wjerak), Taka, Salma and Tashkent (see Barthold, *Asiatische Mittheilungen*, part 4, cf. my *Islam. Orient*, i. 84). Although in the Mongol period we hear of a great deal of traffic on the great roads of Central Asia, it must not be assumed that this is evidence of great commercial activity. It is almost entirely military movements that are referred to; commerce certainly declined when security and lawlessness became rampant everywhere in the states into which the Mongol Empire had been broken up.

The above analysis of the accounts of the land of China by Muhammedan writers will facilitate the investigation of the history of Islam in China. For the older period our investigation must be undertaken in two quite separate fields. The two routes by which Islam came to China were quite different in character and object: the land route, which led into Northern China, brought Islam into the western parts of the northern kingdom only and did not send out colonies to the east; the route by sea ran along the coast of China as far as Kān-fu (L. o. Hangchow-fu, cf. p. 842) founding colonies everywhere, which carefully avoided any attempt to advance into the interior. This is one of the features of the advance of Islam; when it came by water, it remained on the coast, and

when it came by land, it came to the interior. Islam has as a rule been afraid of the sea; from the very beginning it was impressed with a sense of the supremacy of the unbelievers on the ocean and made practically no efforts to dispute their dominion. When we do find Muhammadans undertaking naval expeditions, they were almost always disastrous: all attacks on Byzantium, for example, from the sea failed. It was not till the Mongol period that Islam began to advance through the interior of China, indeed one might almost say that but for the Yuan dynasty the conversion to Islam of large areas of the interior of China would have been impossible, for it was the first to break away from the policy of splendid isolation.

The advance of Islam by sea was, one might say, an automatic process. As soon as the Muslims had conquered Babylon, and the principal towns on the Persian Gulf, they found themselves forced to carry on the existing traditions of these lands which they wished to leave their newly won position unperurbed. There was naturally an immediate change in the management and manning of the ships and at a rate they seem to have continued as before. If the experienced old sailors would not adopt the new religion, how to take their place was found from among their countrymen. It must not be imagined that the Arabs had taken up navigation; the 'Arab proper' i.e. the inhabitants of the Hijaz and the Syrian steppe were quite useless as sailors. The crews of the ships have been recruited from the peoples of the South Arabian coast and the Persian Gulf. (We may perhaps find evidence of the importance of the Persian element in the fact that in the oldest Arabic literature the word for 'captain of a ship' is *ra'is*, see Vulliamy, *Lex. Pers.* i. c. and Dary, *Supplement*). There was nothing against sailing in the teaching of Mohammed; on the contrary, the almost terrible mention of the ships which God causes to sink upon the sea (*Qur'an*, x. 33) might easily have encouraged it. The advance of Islam by land was governed by other motives than its expansion by sea. The primary cause in this case was the divine command: 'fight the unbelievers till you are victorious over them', in combination with the capacity of the Beduin hordes and the commercial instincts of the nomads of the Hijaz. There were practically no limits to the movement thus set up, as soon as new infidel people had been subjected, another was discovered beyond them which had also to be converted or conquered. This process continued till every insuperable obstacle stood in the way. The economic side of the movement was not systematically developed in the Arab period. Under the influence of the needs of Arab Islamization, a system of Arab colonization was pursued, which though not deliberate, proved highly effective from its inward contractions and the necessity for expansion, but it was far from a sound system of political economy among the Arabs, and their ignorance of the organization of capital, with the neglected individualism of their character prevented them reaching a dominating position in the world's commerce. On the other hand, after the fall of the Arab kingdom and the union of all intellectual and economic forces in the 'Umayyad', we may certainly speak of an Islamic Capitalism, which took advantage of the conquests of the Muslim hosts with the greatest energy, deliberation and peace-

lication, to secure a footing everywhere, at the same time facilitating the advance of the armies of Islam by assuring that Muslims would find co-religionists everywhere. Of course, when unusually difficult physical conditions made advance practically impossible or where a strong hostile power, conscious of the danger threatening it, sought to prevent systematically the entrance of any Muhammadan element whatever, even the best of Muslims men could do nothing. This was the case with China and her outlying provinces (i.e., the lands of the Turks, which lay between Transoxania and the coast to Chinese Western Kanto (Yunnan-Kanto); long after Transoxania had been conquered, the towering mountain wall of the Tianshan in the east continued to form an obstacle to more lively commercial intercourse. The desire to exchange certain wares from the Far East for others from the lands of Islam, however, had always forced a few enterprising traders to surmount the obstacles, this was done even in ancient times and Islam merely took up the heritage as entering these lands. The hostile colonization of Islam with the great power of the East and its wealth interrupted traffic for a brief period only and in the long run they appear rather to have stimulated it. We can show (p. 845) how the tremendous difficulties of the journey through these pathless mountains were overcome by the traders with the help of the Turks just as they are at the present day by bold and experienced travellers, but the second great obstacle was not merely insuperable, the obstacles offered to everything foreign by the nations of the new governments, for travellers were wholly dependent on the opinion of the people of the immense land which separated them from the gates of China proper. These 'Tatars' were half Chinese; they knew exactly how to deal with their Chinese masters; they alone understood the web of superstitions and tricks, thousands of years old, with which the worthy Chinese merchants crisscrossed the regulations for the exclusion of foreigners. This was not however calculated to check the Muhammadan traders as their Turkish friends were very creditable allies and the stranger was not safe from attacks on his life or property while among them nor even when he had reached China, the goal of his journey; nowhere could he hope to get justice. A better state of affairs came about when the great Uigur kingdom arose, a clearer view of whose history we may now obtain from the German excavations in Kara Khodja (the ancient capital Khokan) near Tashkent. We now know that from about 840 A.D. to the Mongol invasion there was a powerful kingdom here which afforded protection to all Arabians and whose Buddhist, Christian and Muhammadan priests were allowed to expound their doctrines and propagate them in writing above confidence in the administration of justice, the sale of a way from Pekin to the heart of Transoxania and of a powerful and intelligent government which understood the requirements of commerce (as) finally been established when Genghis Khan with his body of Mongol and Turkish followers which rapidly swelled into an avalanche, made his first decisive advances on land and were from his home Karakorum in the Northern Steppes. It seems that at the beginning of the thirteenth century, that is just before the rise of Mongol power, the overland traffic had stagnated

special importance because the subjects of Humayun and Kish at the entrance to the Persian Gulf were then fighting for supremacy at sea and severely harassing foreign trading-vessels. The sea-borne trade did not, however, become particularly affected thereby. The sea-route for imports to China offered this immense advantage, that the official supervision of commerce in the Chinese ports was in the hands of special officials, whose daily business it was and who possessed a regular routine. There was also the political situation to be considered: the rule of the Mongols (Yüan Dynasty 1206-1368) who were favourable to the influx of Muslims. It may be presumed that the participation of Muhammadans in the sea-trade with China reached its zenith about the time when Vasco da Gama discovered the sea-route to India. About 150 years before this event, which was to effect such a great transference of trade, Liu Hsiang had visited many Chinese seaports, in all of which he found Muslim colonies (Nale, Kashay, li. 477-510, has given a critical account of his journey to China; on his interview with him, li. 433 *et seq.*; on the various places visited by him see Nale, *Marco Polo's* journey; he landed at Zaitun = Ch'uan-chou-fu, from there made an excursion to *Shan-shan* ("China of the Chinese", "Original-China") and called *Shan-shan* ("great China") = Canton, and next went from Zaitun by boat to Kanchow (which is perhaps only Chong-chow, "town of the Chinese"), 10 days' journey, Suifu (Pei-wang), Keshu, 4 days, Shih-shan = Hang-chow-fu, 17 days, to Kichai-shih (i.e. "King's town") also called Kichai-shih = Peking, 64 days, and back. The discovery of the sea-route to India by the Portuguese was a heavy blow to Muhammadan trade with the Far East, and was all the more severe because the power which discovered the route was a very strong one both politically and commercially and was ready and able to take full advantage of its power at once. The coast of East Africa, the shores of the Persian Gulf and the west coast of India were occupied by the Portuguese, and these Franks were by no means willing to recognise the right to trade in these waters as a Muslim monopoly. It was rather their intention to secure the whole of the trade for Portuguese ships. No one of the Muhammadan powers could offer effective resistance to this ambition. At this period a great shifting of the balance of power was going on in Western Asia; the Mamluk Kingdom was tottering to its fall; the 'Ottoman' Turks, that vigorous, young race, which had made a stormy entrance into the world's history about a century before, had established its position and was able to risk an encounter with Egypt which was still a world-power and to make all its territory an Ottoman province. This did not directly affect Portuguese power at sea very much, as the Turco-Egyptian fleet in the Red Sea was not strong enough. Even at a later period the Turks were unable to harm the Portuguese. They proved themselves incapable of pursuing an effective naval policy; an end was made of Lepanto of their futile attempt to found a great navy. Islam's trade by sea with the Far East had been destroyed by the time Albuquerque's power in the Persian Gulf was at an end. The Dutch and, some afterwards, the British gained control of the trade with the Far East.

In the preceding paragraphs the commercial

contacts have been discussed but there still remains to be treated the purely political and general external movements which must be dealt with in connection with the history of the advance of Islam in China.

The earliest notices of the relations of Islam with China, that are worthy of mention, are connected with the political events which arose out of the expansion of Islam. The last Sassanid king, Yazdegerd III had fled to China after the decisive battle of Nahāvand in 642 and sought to persuade the Emperor to take him into his service. His prospects seemed on the whole not unfavourable as an important revolution had just been accomplished in China at this time: the Sui Dynasty had been superseded by the Tang (618 A. D.) whose first Emperors were pursuing an energetic career of conquest. Muhammad and his emissaries were similarly engaged in the west. The fact that the huge mountain wall of the Tien-shan formed a barrier between these two new powers and that on the Chinese side between it and China proper lay the inhospitable Tarim basin, did not prevent Muslim legend from supposing that the Prophet and his companions entered into relationships with the distant empire. According to an oft-repeated tradition (see *Tabarī*, *Mish. Stud.* i. 270 *et seq.*) Muhammad issued a warning against provoking the Turks, whose name he possibly did not even know. Such stories are later inventions whose object it is to become the prestige of the Apostle of God by relating him with foreboding later events. The Chinese were accustomed to hold aloof when under exceptional circumstances strangers entered their territories or when their armies would have to do so beyond the natural frontier. They followed this policy in the case of Yazdegerd. The Emperor Tai Tsung (627-650) refused his aid for help (this was assumed from Tabarī, i. 263 *et seq.* even if the report of the envoy is legendary; cf. i. 2876). The spirit of Islam, on the other hand, urged its adherents to unprovoked aggression as soon as it seemed possible to risk it and by 713 the great general Kutsin b. al-Buhārī had led an army out of the conquered Ferghana across the mountains into the adjoining land of the Turks. His campaign was unsuccessful; the comparison of the original authorities in Tabarī, i. 1273-1279, shows that his expedition did not result in the conquest of Kashghar. The story of the sending of an ambassador to the Emperor of China (Hsiao-Yung 782-790) which Tabarī gives (ii. 1277 *et seq.*) in the traditional form adorned with well-known motives, is probably historical; but we find no mention of a return embassy from the Chinese (at an earlier period Chinese ambassadors had appeared at the Sassanid court in the time of Khosrow Anshirvan, see Tabarī, i. 29 = Nöldeke, p. 167). The Muslims under the Omayyads had a good deal of indirect intercourse with China, in so much as the Khān of the Turks and the Valigū (in Tabarī everywhere corrupted to *Uighū*, cf. on this reading, the *Arabika* of the manuscripts and printed editions, which F. W. K. Müller has ingeniously recognised as *Uighū* = *Uighur*), were vassals of the Emperor; the scene between Nālek and the Valigū on the one hand and Shadd (the *shāh* of the *Uighur* inscriptions) and the *shāh* (probably to be compared with the *shāh* of Theophanes, see Chavannes, *Pro-*

the *Chou-tseu*, ii. 28) on the other, in which the Shudi made the *Kou-tou* before the *Yeh-shi*, has been described in a classical passage by *Tsai-tzu*, li. 1224, (year 91 = 710); the *Yeh-shi* was sent to Damascus and was probably the first Chinese, or rather Chinese Turk whom the Syrians had ever seen. It may be regarded as certain that Chinese policy supported the resistance of the *Khitan* of the *Ts'u* and the smaller states to *T'ang* suzerainty dependent on him or directly feodatory to China; the Muslims were thus forced to fight continually. The *Khitan* who are probably to be located in the *Pamir* were not defeated before 750 (see *Tsai-tzu*, li. 74); *al-Khwarizmi* (with *form* cf. *Khwarizmi*), the king of *Kashghar*, was killed in 751 and his treasures, valuable articles of Chinese manufacture, were sent to *Samarqand* to the Muslim *Tsai-tzu*, li. 79 or 80. When the fall of the Arab Empire, the entry of Muhammadan expansion began to abate and the central authorities devoted themselves to the defence of and establishment of order in the territories they had won, and contemporaneously, on the Chinese side under the later *T'ang* Emperor, the power of the central government began to weaken, powerful buffer states soon arose between the two kingdoms, first that of the *Uigurs*, later that of the *Karakhanids* (*Karakhanids*). The situation thus produced was a most unfavourable one for the advance of Islam into China; for however weak the *T'ang* dynasty, that succeeded the *T'ang*, were, the country still held fast by the central "No foreign religion in China". If Buddhism overcame the great resistance offered as its introduction, it was because it was in the first place to a certain extent similar to the philosophical *Lit-tai*, hardly to be called a religion, which was the most widely professed, and secondly because it adopted elements congenial to the Chinese mind and thus fitted itself to with the prevailing sense of feeling, Islam with its rigid doctrine of the One God, which made no concessions and repelled by its overbearing, provocative attitude of those who professed it, which was above all, unlike Buddhism, essentially a political religion, could only find a footing in the land under the protection of a strong arm. It was not till under the rule of the Mongol empire founded by *Cingis Khan* that this opportunity arose. The Mongol prince was without a religion i.e. their religion was the worship of their lucky star combined with an unusual energy in calling down this star from heaven. *Cingis Khan* himself considered only the advantages of a general lack of homogeneity among his subjects and mingled sections of peoples with one another without regard to race or religion whenever it served his purposes. It was above all necessary for him as a Mongol to break up the Chinese elements and mix the population so that no strong alliance of various sections could be formed against him. Besides his own countrymen he found helpers in the carrying out of his operation in the various *blatini* nations of the west, who were famous for their bravery. Among these the *Turks* were the most important as regards numbers, influence, skill in the use of weapons and discipline; we may presume that among these were *Afghan* mercenaries, for the *Afghans*, the *Pathans* of India, used to go abroad as mercenaries (cf. the *Afghans* in the story of *Yulsh* Bag of *Kashghar*, like the *Swiss*, though unlike the latter, they were *autonomous* for their

treachery and brutality; *lodges* of his followers may also have come from the mountains of *Persia*, the *futuness* of the *Kands*; these were not however *Pamirs* in the strict sense of the word i.e. the inhabitants of the *Persian* plains, who were not particularly noted for their valour. It is scarcely possible to ascertain the exact details of the composition of the hosts of *Cingis Khan* and his successors: for the great Mongol sovereigns were not given to *work*; their main concern was the soldiers themselves and not that they should be neatly numbered in lists. We can only suppose that the adjoining lands supplied the greatest number of recruits and these were, besides the land of the *Turks* between the *Great Wall* and the *Tien-Shan* (*Chinese* *Turkistan*), *Tatar* and *Khorasan*. This does not sufficiently explain the remarkable fact that from that time to the present day the *Persian* language has been regarded by the Muslims of China as the language of polite speech, that the popular Chinese written by Muslims is strongly mixed with *Persian*. (A good example of this language is to be found in the small Chinese manuscript *M. S. Sin. Hartmann*, 1. in the Royal Library in Berlin which contains a Chinese text in Arabic script, published by *Forke* in *T'ung-Pao* Ser. II. vol. viii. No. 3). It cannot be supposed that the greater part of these invaders were *Persians*, who lost their mother tongue after settling in China but retained a memory of it in the numerous relics that have survived. The admixture of *Persian* found in their language is rather due to the fact that all these barbarous and semi-barbarous peoples of Western Asia, who pressed to join the standards of the Mongol leaders, had a superstitious respect for the *Persian* language (it is well-known that *Persian* was the court and official language in the Central Asian and Indian kingdoms) and it is a remarkable sign of the strength of the individuality of the Ottomans that they supplanted the published *Persian* of their predecessors by their own uncouth Turkish tongue). Their introduction of *Persian* elements into Chinese, the language they had adopted, may be compared to the admixture of French, which would have been introduced by a *Pole* or *Ruman* adopting German in the xviii century because the former was to him the language of literature. There is also the following factor to be taken into account. As soon as *Khubilai Khan* had established his throne in China, he appointed large numbers of *Persians* as officers of the court and state. *Marco Polo* and the *Maifusa* both treat at some length of these foreigners in Chinese service. One of them made himself very disagreeable: *Achmeth* (*Achmet*) the *Balla*, whose story is given not only in Chinese sources (see *de Mallin*, ii. 412 or 413), which we might expect to be prejudiced, but also in the faithful narrative of the incomparable *Venetian* (see *Yule*, *Marco Polo*, i. 213 or 214). These Muslims must have been for the greater part *Persians*, and they contributed to preserve the prestige of the *Persian* language and to carry it into the interior of the country. It is impossible even to make a guess at the number of Muslims introduced into China by the Mongol rulers. We have one example attested by numerous documents of the combinations that were produced by the introduction of Muslim elements by the Mongol Emperors, and of how a great strengthening of

Islam in China might thus have been produced. Craig Khan took as one of his officers a man who was said to come from Baghdad and claimed to be a descendant of the Prophet, namely Shams al-Din Omar, known as Saiyid-i Adill. We have several biographies of this man; the principal is that in the *Vincent*, the official history of the Mongol dynasty (Book cxxx. Biography 13) which Vincent has discussed in d'Ollone, p. 25 et seq.; there are others in the *Treasury* (II, 2, p. 25 et seq.) with notices of his sons Najir al-Din, the Son-at-din of Marco Polo, and Huiain, and to the great biography *Ta-chinggi-fong-shih* (translated by Vincent in the *Monks' Hist.*, February, 1903); of special importance is the biography by Fa-Hsiang, which has been critically discussed by Leysse in d'Ollone, p. 50 et seq.; latterly must be mentioned a passage in *Rajhat al-Din*, which is given in Blochet's translation in d'Ollone, p. 25 et seq. According to Fa-Hsiang, Saiyid-i Adill was the 15th descendant of a certain Sa Fel-erb (Suflet) and 26th to line from the Prophet (Vincent has discussed the ancestors and descendants of Saiyid-i Adill in a separate essay in d'Ollone, pp. 170-183). He was called Shams al-Din Omar and was called to high office by Ghazni (1260-1294). The Emperor gave him the name Sa'i Tien-shih, a translation of Saiyid-i Adill "illuminous lord" and appointed him governor of Yunnan to restore order there. He was afterwards also given the honorary title "Prince of Hsien Yang". He left five sons and thirteen grandsons. Leysse rightly doubts the authenticity of the genealogical table in Fa-Hsiang. It is not improbable that it was invented by the later chroniclers, partly to give their hero more prestige and partly to connect the connection of the rise of the family with the formation of the hated Mingus. According to the usual statements Saiyid-i Adill came originally from Baghdad and governed Yunnan from 1273 till his death in 1279; he was buried in Wen-chin near his capital. His tomb bore with its inscriptions was first discovered by the d'Ollone expedition and aroused great interest particularly as there was a second tomb, also with inscription, in Kiangsu-fu. It has now been ascertained that the second grave in Shensi is a cenotaph which only contained the court-stones of the dead governor (see Vincent, *Monks' Hist.*, p. 41, note 1).

Although Saiyid-i Adill certainly did much for the propagation of Islam in Yunnan, it is his son Najir al-Din to whom is ascribed the main credit for its dissemination. He was a scholar and at first governed the province of Shensi; he later became governor of Yunnan where he died in 1292 and was succeeded by his brother Huiain. The other sons also held high offices of state and so did the grandsons. Among the further descendants may be mentioned Ma Chiu (c. 1630-1710) (in the fourteenth generation) who was a learned scholar and published his famous work "The Magnificent Nestle of Islam" in 1685; he supervised the renovation of the tomb and temple of his ancestor Saiyid-i Adill; one of the inscriptions on the tomb is by him. The present head of the family is Ma Wu-ch'ing, Imam of a mosque in the province (d'Ollone, p. 182). Whether or not the systematic expansion of Islam took place under the Sai provincial dynasty, it may be regarded as certain that the predominance of Islam in Yunnan dates from that period. There have been scarcely any

appreciable inroads from outside since that period. It cannot be so strongly emphasized that the direction of this movement was from the interior, from the north. The Muhammadan colonies on the coast were hardly affected by it. On the other hand it may safely be assumed that the Muslims of Yunnan remained in constant communication with those of the northern provinces of Shensi and Kansu. The trade of mules, i.e. herds of animals for riding and transport purposes, still pursued at the present day by the Muslims of China, which brings them into contact with numerous foreigners, was no doubt followed by them quite early and they are particularly well adapted for it by their energy and endurance.

If these Muslims were left to themselves and received no addition through immigration from other Muslim countries, the fact that there are so many of them is remarkable. The number of Muslims in China used to be very much overestimated, however. There are certainly not 20-30 millions of them ($\frac{1}{10}$ - $\frac{1}{12}$ of the whole population). The d'Ollone expedition found them much below this figure in the districts visited and there were those which had been most subject to Muhammadan influence. d'Ollone estimates the Muslims at 1% of the population on the mainland followed by him, but gives a higher figure for Yunnan and Kansu. Davies, *Yunnan*, 1908, estimates 3% for Yunnan, i.e. 300,000 to 400,000, but gives a much lower figure for Szechuan which has four times the population of the other two provinces together. We thus arrive at an estimate of 4,000,000 for the whole of China (d'Ollone, p. 429 et seq.).

The estimates in Broadhall are only approximations which are quite unreliable, and give no clue to the proportion of Muslims in the rest of the population; for we have no reliable statistics for the total population. Broadhall sent forms of inquiry to over 800 people in China and received 200 replies from various parts of the empire. As a result we have the following figures for the individual provinces.

Kansu: minimum 2,000,000, maximum 3,500,000; the Muslims are irregularly distributed; they are more numerous in the west and they increase more rapidly than the Chinese. Many districts have been depopulated as a result of the revolts. In the important town of Liang-chow-fu, the seat of the government, there are only 70 Muhammadans, who are allowed to live there. In Hsiang-fu, including the administrative district, there are said to be 250,000 Muslims while there are 25,000 in Lam-chow-fu, the capital. There are several mosques in most of the larger towns; in some places Muhammadans are not allowed to live within the town so that the mosques are in the outskirts; this is the case in Ning-hsia and Ping-liang.

Shensi: Before the change there were said to be 1,000,000; but after these a great migration to Kansu took place. Official figures give 9480 for Singsu and 26,000 for the whole province. There are certainly not more than 500,000. Singsu has 7 mosques and Hsiang-chung-fu 3.

Shensi: From the statistics for individual districts the total may be estimated at 25,000.

Chihli: The figures differ considerably and the total varies from 250,000 to 1,000,000. Pekin, with 30-40 mosques (the Chief Mosque is Nanchih, in which the Turk 'Abd Raza teaches), and

over 10,000 Muslims; there are large colonies north and south of Tientsin; north of the Great Wall there are Muslims in the district on the Mongolian frontier and they form decided soldier bands.

Shantung: between 100,000 and 300,000; there are few in the east, but in the centre and west, the Muslims are numerous. We have detailed statistics given by a Mullah for Chi-nan, Chi-ning, Yen-chou-fu, Ts'ao-fu, Tse-chou-fu, Shieh-ching-shing, Su-chow and Ching-chow-fu, which have in part been proved fairly accurate.

Honan: probably rather more than 100,000; there are 40,000 Muslims in Hui-ching-fu and the surrounding villages are all Mohammedans; Ching-shan has 10,000 (practically families); the whole population of Hui-shan-chi is Mohammedan; mosques are numerous, almost every Hui town has one.

Kiangsu: the estimate is very uncertain, perhaps 350,000; in Nan-king there are 60,000 with 25 mosques; almost every town of any size has one; we have no statistics for Su-chow.

Szechuan: the districts for which we have figures, give a total of about 50,000; as the province is a very large one, we may assume the total to be 80,000; the great Mohammedan centre is in the northwest (Kung-pan-ching etc.) and Islam is making remarkable progress on the Tibetan frontier. In Chengtu the Tao (Kia-chiao) appears to be represented (with 13 temples) and the Aborigines as well as the Hui-chiao (with 15 Altars).

Kuei-chow: hardly more than 10,000, there are only 4 mosques in the whole province.

Yunnan: the estimates vary from 100,000 to 1,000,000, the collection made great gaps; the Muslims probably had to give low estimates in order not to arouse the suspicions of the Chinese. Muslims form scarcely more than 3% of the whole population (cf. the note in Davies's work, p. 827 above); the Mohammedans of Yunnan are said not to be distinguishable by dress or mentality from the Chinese. According to Davies they are ten times as numerous in the plains as in the highlands, he estimates the total population at 20 millions, so that if we take the proportion at 3% the Mohammedans are about 600,000 which is a striking contrast to Thibault's 4,000,000. Soult however (*Rev. de l'Inde* Mar., Oct. 1900) estimated the number at 800,000 to 1,000,000 and the indigenous Khodas at 1,000,000. Mosques have not been allowed since the 18th c., though previously the Mohammedans had important places of worship (a temple in Tai-fu was used as a mosque).

Hopuh: scarcely more than 10,000; there are 3 mosques in Wo-chang and 2 in Hui-kou.

Kiangsi: not more than 2,500.

Anhui: estimated at 40,000; they are most numerous in the north; there are 6000 and 2 mosques in Anking and the neighbourhood.

Chek-tung: about 7,500; Hsiang-chou-fu, which is mentioned by all the older Arab geographers and where there was a large and prosperous Mohammedan colony in the 13th c., has now only 120-1000 families (including the surrounding country) and 3 (4) mosques.

Hunan: about 20,000, the largest colony appears to be in Chang-sha where there are 3,000 with 3 mosques.

Kuang-tung (with Kanton): about 35,000; the great city of Canton, the *Shan-fu* of the geo-

graphers, the *Yi-fu* of the *Shan-fu* has at the present day (including the district around) 7000-10000 with 5 mosques. Hainan has two places with mosques.

Kiangsi: 15,000-20,000 of whom 6000 are in the capital Kuei-lin, who have probably immigrated from the north; there are 6 mosques in Kuei-lin and in Wuchow.

Pekou: probably only 1,000; there are mosques in Amoy, Kachow and Chang-chow-fu; the 40 or 50 Muslims in Amoy belong to the official class.

Manchuria: about 200,000; Mukden 17,000, Kai-yuan 2000, Hsin-miao-fu 2500, Chia-chow-fu 3500, Pa-kuen 2000, Hsiao-yang 2500, Kuang-ning 7500.

Mongolia: there are Muslims in the south only; no figures are available.

Although Turkestan does not fall within the scope of this article (see above, p. 839b), it may be mentioned that the estimate varies from 1,000,000 to 2,400,000.

These figures give, exclusive of Turkestan, a minimum of 3,700,000 and a maximum of 5,400,000. It is remarkable that the missionaries living in the country, give very dissimilar figures; some obviously *small* centres of Islam and quite important schools where others are nothing.

II. SOCIOLOGY.

If we regard the Mohammedan population of China as a social unit, the five phases of life under which any society may be dealt with are as follows.

1. Relations of the sexes (marriage, family, kinship). The relations of the sexes are governed by the Sharfa law limiting on the whole Islamic world, to the exclusive form developed by the Hanafi school, but the details of the code are not well known to the great mass of the Mohammedans of China nor are they observed as far as they are known. How far alterations have been produced by the influence of the surrounding Chinese cannot be ascertained from the meagre details at our disposal; it would be in any case impossible to generalize from these as the influences of work differ in the different localities. Thibault's (il. 266 note 5) remark on the well known law that the Muslim may have but more than four wives and have slaves as concubines, "In China Mohammedans are forced to observe the laws of the Empire in regard to marriage" is certainly incorrect. It implies that the Chinese government would interfere in the domain of private law, although the Chinese marriage laws may lay claim to be universally observed (these have been digested by P. Hoang, *Le Mariage Chinois au point de vue législatif*, *Rev. de l'Inde*, 29, 14 Shanghai, 1899). I have been unable to find in this work a definite statement that Mohammedans occupy a special position. The general position of woman, too, is not uniform but differs according to rank and locality. According to Davies, the prescribed wearing of a veil is not followed and the women go about unveiled, this was previously noted by Grenard, who, however, made an exception for the wives of rich men; it was only in Hsichow that d'Orville found another custom prevailing, where the women wear a veil of black silk below the eyes (this appears to me to be connected with allusion to the teachings of

Ma-hua-lang), they also appear in the streets on horseback instead of in carriages (p. 247). As to binding the feet d'Ollive found no distinction between Muslim and Chinese women; particularly in Kansu, this custom was very prevalent among Mohammedans. The fact that the woman is not a Mohammedan, is not an obstacle to marriage; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand Muslim women are strictly forbidden to marry a man of another faith, and such a union is looked upon as a most heinous sin (see for example the short catechism in Wanshew-Stille p. 105, § 6, also in Thiersch, II. 265 note 1); even here compromises are made with heaven: for example, the Emperor Ch'ien-lung received a Turkish princess into his harem and when I was passing through Minjol (a day's journey west of Kichghar) in 1902, I saw a Chinese man with his Turk wife. Much intercourse of the sexes is more freedom the punishment prescribed by law (40 lashes with a whip, or flogging) than in other Mohammedan countries. It must not be supposed however that morality is particularly lax, nor are the ancestral rites, common among the Chinese (thereon see the instructive chapter in Maigum, *Superstition, Crime of Islam*, in *China*, Lyons 1902, p. 185 et seq.), so widespread among the Muslims. Special attention is not paid to the bringing up of children. A striking feature of family life is the honor paid to the parents and the reverence in which the ancestors are held. These virtues are extolled, for example, in the Chinese Arabic Ma. Sin. Hartmann I., published by Parke, and find expression in forms of prayer for parents and ancestors; ancestral tablets in Chinese fashion are also used. Social distinctions are not defined by pedigree except in the case of descendants of the Prophet. The intellect which has been produced in other Mohammedan lands by the exaggerated respect for the nobility of birth and the obstinate entry to it by false means, is not found among the Chinese Muslims nor is the Saltyd system developed here. This is explained by the fact that the people know they have for the most part been converted to Islam as seen descended from converts (*huang*). Any traces of the Saltyd system that exist in China seem to date from the *hain chiao* when the sectarian Ma-hua-lang declared himself a Saltyd (see p. 524). Whether the Muslims of China may be distinguished by the common possession of inherited physical characteristics (by race) is a question which cannot yet be satisfactorily answered. The usual supposition is that there are ethnic peculiarities and it is even said that the Muslim shows a special type, which may be recognized at once (this is the substance of Henshall's remarks pgs. 221 et seq.; cf. also the Muslim of Ningxia, who differs considerably in appearance and regard themselves as brothers by race of the Europeans, Bartholomae, *Comptes-Rendus de l'Ac. des Int. et Nécess. L'Europe* 1905, p. 188). We must however take into account the opposite view adopted by d'Ollive; it is true that he gives pictures of Chinese Muslims whose faces have something of the Arab or Turk, but he lays stress on the fact that it is only the exceptions he is showing to his readers and emphasises (p. 430) that the great mass of Mohammedans are quite like other Chi-

nese; it may however be noted that it is impossible to speak of a general Chinese type; there are enormous different types in China and this diversity is actually seen among Mohammedans also. An Arab and a Turkish type are due to immigration and natural increase without any connection with the Chinese stock as a matter of fact, however, most of the Muslim belong to the latter. There can be no question of the preservation of the type of the immigrants, because since the first great immigration of Muslims, many fearful devastations of the districts in which the population is mixed have taken place. We have already spoken of the marriage of Muslim men with Chinese women; the children are of course Muslim and repeat the process so that after several generations there is but little foreign blood left in the individual. In the great majority of cases there is not one drop. Generally the Muslim is a Chinese who has been adopted or purchased as a child by a believer and brought up to Islam (on the purchase of children see also my *Sin. Orient.* I. 45). Conversion of adults is also frequent (cf. p. 524).

II. Language and Ethnic Relations. If the possession of a common speech be a sign of the same nationality, then the Mohammedans of China are undoubtedly Chinese, for Chinese is the language, which they write and speak; although they are said to possess dialectic peculiarities (according to Henshall, p. 221 et seq., the Muslim is frequently recognizable by his speech), that their language is essentially the same as that of their Chinese neighbors is not to be denied. But religion forms so sharp a dividing line between Muslims and the other Chinese, that each of these groups feels itself to be a separate people (cf. the Ottomans of Turkish descent and the Turkish-speaking Azerbaijanis, who are sometimes scarcely distinguishable from real Turks and in whose language also there is practically no perceptible difference). In this respect the Muslims feel themselves far removed from their Chinese compatriots and the Chinese will hardly grant the Muslims the same *hain chiao*. Their common name usually called *Hui-hai* or *Hu-chai*, though they do not tolerate this name themselves but call themselves *fo-chai* "white-head" (i. e. wearers of white turbans). Whether there is a connection between *hain chiao* and the name for the Uighurs, written very variously in Chinese, is doubtful (cf. Charanvier, *Les Turbans Occidentaux*, p. 57-64). Only one group of Muslims in China are distinguished by their language, viz. the Salar who live in Hsien-tung-shing (Mayfair, 371,) on the right bank of the Huang-ho and in the surrounding villages and are also to be found on one portion of the road from Hainan to Hsien-tung. They differ considerably from the average type of Chinese Muslim. The figure is tall and tall, the nose large and straight, the eyes black and level, the cheekbones and prominent, the face long, the eyebrows thick, the beard full and black, the forehead receding, the skull flattened behind, the skin brown but does yellow; they are therefore very like the Turks of Chinese Turkestan. Their most remarkable characteristics is their language which might be called a corrupt Turk (cf. the specimens in Leonard and Pottinger). In religion they are strict Muslims and show great respect to their clergy (*fo-chai*), but for the rest they are rather given to the drinking of

spirits. Even the lowest classes are acquainted with the Arabic alphabet. They do not burn incense nor allow the imperial tablet to be exhibited in their houses. They are said to have received their present form of religion from a reformer named Ma-Ming-hsin (Muhammad Anis) who preached about 1750; he laid special stress on praying aloud (cf. p. 853) and much confusion was thereby brought about. The Salars are bold robbers and consort with the ill-faith on the upper Huang-ho, to whom they are bound by a common hatred of the Chinese. The above account is from Siehard in *Asiatica*, II. 437 et seq. D'Olleux's account, p. 245, is different. According to him they dwell only in twelve villages in the district of Hsiao-hua-fung on the right bank of the Huang-ho, but have ~~much~~ intercourse with the rest of the world, particularly with Hsiao-hua-fung; there are only five Salars families in Hsiao-hua-fung, they do not share ~~the~~ head entirely but ~~the~~ the pigtail; they do ~~not~~ wear the four-cornered cap but the Chinese turban-like headgear; they have frequently played a part in revolutions and claim to have originally come from Samarkand. D'Olleux, p. 307 et seq. ~~has~~ collected historical notions of them from Chinese sources. The Torguts are not to be considered as a separate singular group. According to most travellers the name is limited to the Chinese Muslims of the provinces of Kansu and Shensi. According to my own observations, the name is applied in all Chinese Muslim by the Turks of Chinese Turkestan. This is really quite natural; for *Turk* means "returned" i.e. to the true faith (according to the common Muhammadan idea, every man is born a Muslim and his conversion from another religion in which he has been brought up by his parents, is really only a return to his original faith); it corresponds exactly to *darwa*, the name given by the Thoman to the Jews in Smyrna and Salonica, who ~~converted~~ converted to Islam in 1650. The term *darwa* is regarded as ~~being~~ used by the Chinese Muslims, just as *darwa* among the Muslims of Salonica; the explanation of the word is from *darwa* (D'Olleux, p. 240 and 247) is to be utterly rejected.

III. Trades and Occupations. The stronger physique and greater energy of many of the Muslims of China explain their fondness for entering the Chinese army in which there actually are a few number of Muslim officers. The civil service is ~~not~~ sought after as the examination requires a familiarity with the religious and social views of the government. With the breaking away from the old tradition which set in at the end of 1911, the Muhammadan elements will probably play a greater part in the development of the country by taking an active part in the government service; they ~~will~~ however give up any thought of the impressment of Islam and look upon religion as a private affair entirely, the practice of which must always be placed second to the requirements of the state.

There are, however, certain trades at the present day which are entirely in the hands of Muslims and assure them a comfortable livelihood so that it is only under exceptional circumstances that a great movement into the civil service may be anticipated. The occupation most commonly followed by Muslims is that of *darwa*, i.e. home-keeper; he may have a large number of transient animals and a number of servants to attend to them or

he may have only a couple of animals and execute his commissions himself. The business requires prudence and energy and the Muslim *darwa* have the reputation of sticking at nothing, not even violence, to extricate themselves from difficulties (see Brownhall, p. 225, for an account of the threatening of wealthy Chinese by a Muhammadan driver). In the Tibetan frontier (Kang-ping-fung) the tea trade is in the hands of Chinese Agri-culture is only followed by the Muslims of Kansu, Shensi and Yunnan, they are said to be inferior to the Chinese in this pursuit but to surpass them in cattle-raising. Lam-keeping must also be mentioned; this is usually followed with the observation of the prescriptions of Islam. The sign of the Muslim icon-keeper therefore bears a natural as a sign of religious purity; one missionary however tells of a Muslim inn, in Chin-chang, where pork was served. (Brownhall, p. 226).

IV. Religious Life. Religion, with the Muslims of China as in other parts of the world, dominates their whole view of life. From his earliest childhood the child of Muslim parents has impressed upon him that he is a Muslim and as such better than the infidel Chinese. It cannot be denied that the consciousness of belonging to the great Islamic community gives the Muslims of China a feeling of pride which makes their gaze nobler, their eyes brighter and their bearing more dignified. On this point all observers are agreed. These laughing men are, however, very shrewd and have always been ready to make concessions to the ruling class and the religious and political system under which they live, in order to obtain security for their lives and property. Those who enter the government service take part in the ritual formalities, a procedure which ~~is~~ is, in his *Memories of China* recommends for imitation to Chinese Christians. At the same time there is a great gulf between the Chinese and Muslims, who are suspected of wishing to form a state within the state. Where their fanaticism has not yet been aroused, the Muslims are favourably disposed to Europeans and frequently regard them as of the same race as themselves in opposition to the Chinese or "blackbills". Though individual Muslim officials of high rank have been conspicuous for their hatred of foreigners, this is, as in the case of non-Muslim Chinese, due, not to religious motives, but to resentment at the strong arm with which foreigners are interfering in the internal affairs of China. The attitude of Muslim generals is frequently simply due to a quite mean desire for rank and wealth. For example Tung Fu-Hsiang was not a "fanatical Muslim" at all but an adventurer, who gathered adherents around him during the anarchy at the rebellion of 1861-1874 and in return for the rank of Mandarin became a tool of the Viceroy Tso-Tung-fung and the General Lu-Song-dian. He betrayed the instigator of the rebellion, Ma Hui-tung, the prophet of the "new religion", who fell into his hands in a battle from his town of Ku-kung-Tung on this occasion gained large estates. In 1895 again, it was Tung, who put down the rising in Hsiao-hua-fung and Ho-Chow, and enriched himself in the usual way with the plunder which he took as victor from his co-religionists. He received the title of generalissimo (*ta tai*) and was practically king of the land. When in 1900 the Boxer rising broke out in Pekin, he listened

thither, with his missions, among whom was the notorious Ma An-lung, founder of Ho-Chow, and distinguished himself by his fanatical and malignant attitude to Kiangnan; the latter only saw in him a Muslim with a body of Muslim followers and knew nothing of his real relationship to Islam. He was officially "banished" as a punishment to Kiangnan where he lived the life of a ground agent; he had two strong castles at Kin-ki-pu and a bodyguard of 500 old soldiers, while around he had agents on the estates which he had taken from the Muslims. The governors of Kin-ki-pu and Lin-chow 都司 do nothing without his consent. When he died in February 1904, all the titles, which had been taken from him under European pressure, were restored to him and his body was interred with the highest honours in Kiangnan, his birthplace. Another Muslim who held high military rank in recent times was Ma Tsi-ai, a native of Yunnan, nephew of the eunuch Ma Huan-lung, and general commanding the army in Sze-Chuan.

Toughened by oppression, the Muslims of China have been working from the earliest times, and particularly keenly during the last 250 years, to increase their numbers by other means than natural reproduction. Their main instrument has been conversion. 回教 children to convert to Islam, they adopted the simple plan of buying them from their Chinese parents when the latter were in great poverty (on this and parallel from the practice of Christian missions see *"China and her Islam"* in my *Islam. Orient*, I, p. 45 and note 1.). Many hundreds of thousands of Chinese children have thus become members of the Islamic community. We have already mentioned the marriage and conversion of Chinese women by Muslims (see above, p. 849). With adults it is not the preaching of the true faith, which the Muslims would, as a matter of fact, hardly dare practice, that is effective, but dependence on some influential Muhammadan; thus, for example, soldiers are often converted by Muslim officers; Muhammadan mandarins are too often able to make converts, owing to their frequent change of residence. D'Ollone 都司 among Muslims, who were 回教 converts, others could trace their faith to some ancestor who had been converted and was even able to say who he was. The number of converts has varied in different periods according to the power of the Muhammadan officials. At the present day 回教 are rare, because the court is suspicious of Muslims since the great rising, and they have fallen into disrepute (d'Ollone, p. 431). What will be the effect of 回教 reforms cannot yet be said, but it will certainly keep a sharper eye on any separatist movements. When 回教 the middle of January 1912 the demand 回教 the Chinese revolutionaries was published, viz. that "Manchus, Mongols, Muhammadans, Tibetans and Chinese should be treated with perfect equality" it was the Turks of Chinese Turkestan who were meant by "Muhammadans"; they were to lose a few petty privileges in the process of equalisation. The Muslims of China proper are not affected by it. It may safely be said that Islam is by no means unopposed to the Chinese temperament in spite of its many inconveniences (the prohibition of pork, alcohol, opium and woman-worship). One must be cautious, however, in accepting the far-reaching possibilities suggested by d'Ollone

(p. 431) and it is very questionable if even a Muslim Emperor of China could bring about the conversion of the greater part of the Empire to Islam. For the history of the country shows us that China assimilated foreign elements and rejected what it could perfectly assimilate; it would thus be an Islam which was no longer Islamic that we would have to deal with, that is, however, improbable, for throughout the whole Muhammadan world there are signs of a distinct movement towards ecclesiastical reform in the sense of a stricter observation of the precepts of Islam; an Islam, transformed by the Chinese temperament, would certainly no longer be fit to be taken by the whole community. The question of founding a new mixed religion would more probably arise, none of the works, which have been collected by Muslims in his *Chinese Chinese Muhammadans* in d'Ollone, p. 393 ff. 404, are distinctly characterised by an endeavour to reconcile Islam with the teaching of Confucius through a kind of philosophy of religion (cf. particularly nos. 7 and 9; a similar work belonging to Master Hsuehman is at present in my keeping); these things then, Islam to the religion of the country are not to be thought of, for although throughout the whole population of China we find an inclination to form unions and societies, this happens also to be in a particular degree a Muhammadan characteristic. The Muslims in China form a great friendly society, in which every one helps the other (the *tehsen* which is recommended in the Koran). Community in Islam offers so many advantages to its members, that they have no cause to leave it even if their beliefs did not keep them faithful to it. The present state of affairs has naturally a good deal of light thrown upon it by its historical development, which has already 回教 shown above. D'Ollone rightly remarks the striking absence of the Chinese historians with regard to the Muslim while they mention Buddhist and Chinese missionaries; he also recognises the worthlessness of the epigraphic tradition. He is also right in pointing out, that there has never been any expulsion of Islam inland from the coast, but rather that the Muslims of the colonies in the interior were content with the privilege afforded them of practising their religion and kept apart from the rest of the population. D'Ollone draws conclusions from the mention of the *Arabi* "Arabs" = Muslims under the T'ang 唐 of the *Yen-ke* under 回教 (Liu and Chia dynasties (cf. 回教 the mention of the *Yen-ke* under the Liu in Bretschneider, *Siebnarval Reise*, I, 267, and under the Chia in Thiersant, I, 6; though problematical) but this only points to a knowledge of the Muslims of the west and is no proof of Muslim immigration. The *Sufis* in d'Ollone who 回教 from Suifu with several thousand Muslims and settled on the borders of Mongolia and China is a fictitious character. As a matter of fact (cf. above, p. 847) there is no reason to believe there was any appreciable immigration of Muhammadans before Saljiid Aqil Omar. Marco Polo only 回教 mentions the presence of Muslims in the province of Yunnan through which he travelled a year after the death of 回教 Saljiid while everywhere else he speaks of idolaters (cf. p. 848 above). The Saljiid built the two first mosques in Yunnan (d'Ollone, p. 35) and the Muslims of Yunnan trace their origin to him and his 回教 Nakh al-Din, Khubilai also was

surrounded by Muslims in his court; the history of the notorious Ahmad has already been mentioned (p. 846). In 1333 a grandson of Sayid-i Ajjak obtained a decree from the Emperor that Islam should be recognized as *shing-shen-chiao* "the true and pure religion", as it is still called at the present day; in 1420 another grandson of the Sayid was commissioned by the Emperor to build mosques in the provincial capitals Kienanfu and Nanking. A later descendant of the Sayid, the Manchu already mentioned, presented a petition to the Emperor in 1683-1684 asking to rank equally with the descendants of Confucius. This brings us within the period of the Manchu dynasty. One can hardly be wrong in supposing that with the end of the Ming dynasty (1644) and beginning of the Manchu was a great increase in the activity of Islam and a corresponding reaction on the part of the Imperial government. This was undoubtedly connected with the activity and desire of the early Manchu Emperors for expansion. The ridings that took place in the province of Kansu in 1648 and 1783 were reactions against the action of the governing authorities. It was natural that the Muslims of Khabghan, who have been practically independent under the Kalmaqs (Kalmaqs) of 11, repeatedly tried to throw off their rule, under which they had fallen on the destruction of the Kalmaqs kingdom about 1750, see *Ein Hingentant im Islam* in my *Islamische Orient*, 131; of the later times the following ought to be mentioned. 1820-1828 in Kansu and in Turkestan (the connection between these two movements is, however, uncertain); the Muslims of Kansu, who are called *Senjens* by the Turks, have on several occasions taken the field against the Muslims of Turkestan. 1855-1873 in Yunnan, 1862-1877 in Kansu, Shensi and Turkestan; 1895 in Kansu. I leave it an open question whether the conclusion is correct, that there have only been risings of Muslims since about 1644, because they did not feel their number large enough before. It appears to be correct, however, that it has only been under the Manchus that a deliberate policy in regard to religion has been followed by the Muslims, with the systematic increase of their numbers by the purchase of children and bringing a mild pressure to have as possible converts; this policy was, however, very soon met by an equally deliberate policy of oppression on the part of the early Chinese. The placing of a greater development of Islam in this period receives important confirmation from the fact that to all appearances, the literature of the Muslims in China does not begin till the end of the Ming dynasty; at least *Ching chiao chen chiao* "Venerable Exposition of the True Religion", the product of which is dated 1643, appears to be the earliest monument of this literature (K. 1 in Visakro's 13 in d'Ollone, p. 393 et seq.). Since that time the production of books of instruction in religion has never ceased. It was not till 1783, however, that the attention of the Imperial government was attracted to the literary activity of the Muslims, and the Emperor Chien Lung ordered the Marshall A-Kui to investigate the books of the Muslims, on which the latter was able to make a favorable report. That on one has troubled about this literature, shows what little importance was attached to the Muslims.

If we may suppose that with the change of

dynasty in 1644, a new situation appeared in the history of China, this perhaps explains the gradual emergence of a separate religious movement, which has still to reckon with the ancient ideas of the country, but which may be defined with some degree of certainty by the researches and observations of the d'Ollone expedition. The Muslims of the three chief Muslim provinces of China, Kansu, Szechuan and Yunnan are actually divided into two great sections, who are hostile to one another; the followers of the *tas shiao* "the old religion" and the followers of the *shin shiao* "the new religion". However grateful one may be for the extensive materials collected by d'Ollone on these two movements, though he gives them with all reserve, it will only be possible to come to a final conclusion as to the essential difference between them when further material has been collected by specialists. d'Ollone's view that the *tas shiao* religion is characterized by the cult of saints and their tombs and the recognition of heads of the community, to whom God has given special grace is supported by parallels from other Mohammedan sects. It is an axiom that the supremacy of the democratic principle in the life of the community is the earlier, the stronger organization under leaders, who appear as supermen, the later development. The older view seems to be still the predominant one among the Muslims of China. Travellers are all agreed (for d'Ollone's notice see p. 438 et seq.) that the total lack of organization is one of the most remarkable features of Chinese Islam. The various communities are quite independent of one another; they recognize no authority, neither in their provinces nor in the Empire, nor anywhere at all; they know nothing of a Caliph; the Shah of Mecca is, they grant, a worthy servant of religion but they do not recognize his authority. In brief, there is no spiritual hierarchy and none of the legends (*shahs*) of China takes precedence of the others except through learning or renown. Those who officiate among the communities are dependent on the holders, who elect, support and dismiss them without the slightest interference from any one (d'Ollone, p. 439).

Of the details of the division into *tas shiao* and *shin shiao*, I can only mention here that the "new religion" was founded by the Ma Hsueh-lung who was slain during the rising in Kansu. His adherents in Kansu where they are numerous, and in Szechuan, where they are as yet few in number, regard him as the true successor of Mohammed. His descendants or disciples possess supernatural powers. The doctrine of the "new doctrine" is not yet properly known. One is inclined to find Shiism represented in it as at least a very strong voice of Shiism. The notices in d'Ollone make it clear that the teaching of Ma Hsueh-lung is orthodox Sunni and that any special variety of mystic contemplation, such as is found over all Central Asia, is not present in it. Ma Hsueh-lung apparently belonged to the class of financial importers who are typically represented in Chinese Turkestan by the Khodjas, i.e. the descendants of Shahkhan-i Nyam, whose religious and secular conception of the state I have fully discussed in *Ein Hingentant im Islam* in my *Islamische Orient*, 1. 195 et seq. Whether Ma Hsueh-lung was influenced by the doctrine of Mahdism is not certain; there is no definite reference to this in d'Ollone. In

why was Ma Hsiung was regarded as an incarnation of the Spirit, as a *king* for "holy man" or "Prophet", equal to the Prophet Muhammad or superior. It is greatly to the credit of the Muslims of Kansu that only the lower classes allowed themselves to be deceived by this impostor, who, though he had never had the least education, appeared to know everything and had an answer for every question. As the founder of a new sect, Ma Hsiung had to prescribe some external distinctions so that his adherents might be readily recognized; he chose that they should pray with slow voice and hold the hands flat and horizontal in the *front* attitude of prayer in opposition to the low voice and the hollowed hands usual elsewhere, from this custom of praying about, is derived the usual name for the followers of Ma Hsiung. *Qidariye* (corrupted to *Chaidariye*) "one who prays in public" in opposition to *Kidariye* (popularly *Hufsiye*) "one who prays in secret". In these external distinctions, Ma Hsiung appears to have associated himself with a movement in the West which had entered China at an earlier period; 350 years previously, a certain Muhammad Ansa from Turkestan, known in China as Ma Ming-hsin had appeared as a reformer among the Salars (see above p. 350), and introduced praying aloud which led to a general deaf of strife (see Grenard, *Notes sur l'ethnographie du Kansu* in *Revue des Rites, Mission Scientifique dans le Haut Asia*, II, 453). Ma Hsiung did not definitely forbid attendance at mosques but he allowed prayers to be offered up in private houses in the common hall without the observation of any particular formalities of dress. Three or four houses usually have a common place of prayer, a room especially reserved for this purpose; this arrangement was instituted with a view to accommodating his followers to pray more. In Suo-p'ian-fing the followers of the new religion go to the same mosques as those of the old, but in Shensi the schism is complete. The d'Ollone mission had a very bad reception in the mosque of Ch'eng-chi; the followers of the new doctrine have the reputation everywhere of being hostile to Franks while Muslims, as a rule, are friendly to them. After Ma Hsiung's death (in 1871) a schism arose; his son-in-law, Ma Tachai, and his private Ma Hsiung, disputed the sacred heritage. Ma Tachai, who was 55 years old in 1893, had the majority on his side and his home Ch'ao-kou near Ka-yuen is a religious centre of importance and also has a Madrasa. Ma Hsiung's teaching was introduced into Yunnan by Talamai (Talamasani) his youngest brother or nephew, who subsequently fell in battle against Ma Yu-lang. The number of adherents in Yunnan seems to be less than in Szechuen, where d'Ollone found people of the *Asia* *Asia* from the frontiers of Yunnan to the borders of Kansu in addition to the two sects; *Hufsiye* and *Chaidariye* there are two others: *Kudariye* and *Kudariye*; the meaning of *Kudariye* cannot be ascertained (for *Qidariye*); *Kudariye* is certainly *Kudariye*, adherents of 'Abd al-Qadir *Qadir*. According to one *Shung* the four sects are connected with the four caliphs and each of the four is said to have instituted one form of worship; *Abd al-Qadir* the *Hufsiye*, 'Othman the *Chaidariye*, 'Omar the *Kudariye* and 'Ali the *Kudariye*. The name *Kudariye* is also said to be applied to those who pay reverence to tombs. As in most Muhammadan

countries, here also the tombs of famous holy men, who are represented as saints, are venerated; for example, about a mile north of Suo-p'ian-fing is the tomb of an *Shung* from Medina, who came thither in 1663, lived for a time in Shensi, returned the land from a drought by his prayers in 1673 and died in 1680. An *Shung* attends to this tomb. There is also another smaller tomb within the Mausoleum. The orthodox Muslims pressed violently against the reverence of tombs. It is supposed by d'Ollone that the reverence of tombs is one of the characteristics of the new teaching. We cannot agree to this, however, besides it is in contradiction to other statements of the same writer. It is rather the case that the reverence of tombs is widespread in these areas and the fact that Sh-chun, the centre of the new teaching, is rich in tombs, is an accident. It must also be investigated whether the name *Kudariye* of the new doctrine which d'Ollone mentions and on which he bases his conclusion is part of it to be understood as emphasizing this "teaching regarding graves" as a distinguishing feature. On the religious position of the Salars, who are ethnically distinct, see above p. 349. The Muslims of China as a whole are quite ignorant of the content of the whole Islamic world by a Caliph. But the efforts of Samsat at the end of last century had some result: Yaqub Beg recognized 'Abd al-Qadir as "commander of the faithful", and Sulaiman, the Muhammadan king of Yunnan, sought the help of the Caliph, though vainly as it happened. On the mosques of 'Abd al-Qadir, see below p. 354.

As the intellectual life of the Muslim is closely bound up with his religion, the object of elementary education is to instill the elements of religious knowledge into the children by the reading of the Koran and by short catechisms. Two languages are used in this process: the language of the country and that of the Koran, or rather a mixture of Arabic and Persian. There are numerous books of selections from the Koran with or without Chinese translations in use in the country, and little volumes in which the main principles of Islam are given in one or two languages (I have fully described a book of selections from the Koran and a Persian handbook on prayer in *Fort Islamische Kantonschule in my life, Orient*, I, 69 et seq.) a small bilingual catechism (in Arabic and Chinese with scraps of Persian) is in my possession (it works of a dialectic nature in Chinese, the d'Ollone expedition brought back 36 examples of this kind), which Visièze (in d'Ollone, p. 303 et seq.) has described, with the inclusion of all other available material. In the list given by Broomhall, p. 301 et seq. there are only three works with which Visièze was not acquainted. According to Visièze in d'Ollone, p. 379 et seq., there is a Muhammadan newspaper published in Peking entitled *strong* *strong* of *strong* *strong* "Patriotic Gazette". Arabic and Turkish publications find their way among the Muslims of China in fair numbers (d'Ollone, p. 380 et seq.). Art has no place in the life of Chinese Muslims. In one field only is there any attempt at decorative work viz. in Arabic calligraphy; the letters are elaborated into many elegant forms, influenced by the Chinese style of writing; angles and loops are made as in the Chinese way of writing (particularly the "grass" or rapid hand). These Muslims are fond of producing beautifully written

that can be killed by a party of seven in a day". As an abbreviation for *the* *aplati* it denotes a definite tax on certain tributary land.

CİFTLİK, cultivated land, hence country farm i. e. the dwelling-house of the farmer and the lands attached to it; the farms on the Imperial estates are known in the official language as *İftikar-kumruları* in Bursa, a fifth of land of the first quality contained from 50 to 50 *donum* (a *donum* being 25 *peşer* square), of the second quality from 90 to 100 and of the third from 130 to 150. (Cf. HELLER.)

CİGHALEZADE SİNAN PAŞA, an Italian renegade, who was brought as a prisoner to Constantinople with his father. They belonged either to Messina or Genoa, where a prominent family of the name Cigha is known to have existed. According to Gerlach, *Türkische Geschichte*, p. 17 and 244, the father was a *Massimo* family of Genoa a powerful Genoan and holding high rank in the service of the King of Spain. The *Hadikat al-Funun* calls him a captain of the republic of Genoa. Gerlach relates that he was taken prisoner off Messina on the journey from Naples to Spain — by Mate Pasha, according to the *Hadikat*. The father died soon afterwards in the prison of Yedikule. His son, whose Christian name according to the *Hadikat* was Scipio, became a convert to Islam, took the name Sinan and was brought up among the pascas. In 1595 when 25 years of age he became an *Agha* of Janissaries having previously married a daughter of Ahmed Pasha, a granddaughter of Ismail and an Ottoman prince. He had played a prominent part in campaigns in various parts of the Turkish empire: Moldavia, Hungary, Basarabia, Baghdad and Van. In 1599, he became Kapudan Pasha, and in 1596 after the battle of Kereken, Ghazal-Yükük which office he only held for four weeks however. He made himself intolerable by ill advised measures, particularly his great strictness with the janissaries and was banished to Akkoche. He again became Kapudan Pasha and held this rank for four years. After a rather unsuccessful campaign on the Persian frontier he died in Baghdad in 1603. He was the type of unscrupulous renegade who without any personal ability used to succeed in attaining high rank by his cunningness at court and his wealth.

Reiches* (Leipzig 1841), II, numerous references; Gerlach, *Türkische Geschichte* (Frankfurt, 1874); Sami, *Kuruluş-ı İslam* (Constantinople 1906); Othmanlılar, *Hadikat al-Funun* (Constantinople 1271).

CİLLA, a fast lasting forty days (*quadragesima*) which pious ascetics and dervishes spend in isolation, prayer, and fasting. Cf. Jacob, *Die Sema* (Leipzig, p. 36).

CİM, the name of a variant of the letter *Jim* [y. v.] which the Persians have invented to express the fricative *ç* [d] (cf. the arabs, *Asad* [Arabic Whetstone, p. 391a]). This derivative of the letter *Jim* is noteworthy for the pronunciation of *ç* in the time and district in which it was

made. Other peoples, who use the Arabic alphabet, have borrowed *Jim* from the Persians.

CIMKENT, the capital of a district in Russian Turkistan. Lat. 42° 10' N. and Long. 69° 30' E. (Greenw.), 1550 feet above sea-level, on the right bank of the Sadara which flows into the Arty, a tributary of the Sir-Darya. At the time of the Russian conquest (1813 = 1864) the town had a circumference of about 4 miles and was surrounded by a low wall of clay; the citadel was on a high mound in the south-east. According to the most recent census the number of houses in the old town in 1886, while there are 105 in the Russian quarter. The present population is 12,500 of whom 800 are Russians and 150 Jews. The town which is pleasantly situated, is distinguished by its temperate climate and excellent water from most of the other towns of Central Asia and is visited by many Russian families from Tashkent as a summer resort. The post and military routes to Tashkent from European Russia (via Orenburg, Kazaninsk and Tarkentinsk) and from Siberia (via Werni) and Andizh-Arty meet at Cimkent so that the town used to be of some importance as a trading-centre. Cimkent was not touched by the Orenburg-Tashkent railway, opened in 1905. Trade is, as usual in Turkistan, mainly in the hands of Tatars (Nguzi).

Since the last decade of the 19th century there have been 17 Russian villages in the district of Cimkent, which are almost all fairly prosperous. The most important of the native villages is Sadara, the *Ashikhab* or *Ashikhab* of the Arab geographers (now pronounced *Iskhab*, in Persian manuscript frequently *Iskhab*) with many tombs of an earlier period, now chiefly noted for its horse-market.

Of cereals, wheat is the most cultivated, the best quality being produced in Sadara and the Russian villages. Since 1897, cotton has been grown particularly in the immediate neighbourhood of Cimkent, formerly it used to be thought that cotton could not be grown in this part of Turkistan on account of its northerly situation; in the first year 320,000 kg. was produced which has now risen to 800,000 kg. The district of Cimkent is now the only place in the world where the medicinal plant *Artemisia strobilata*, from which *anabala* is prepared, survives; the whole annual yield goes to Hamburg, there and not in Russia are the prices paid for the whole world.

Cimkent (sic) is mentioned in the *Zafar-Nama* of Shams al-Din Vardi (last ed. i. 106) as "a village near Sadara". In later sources also, at least down to the first half of the 19th century (in 1723 *Sadara* was taken by the Kalmycks) it is always Sadara and not Cimkent which appears as the "town" of this district; the changes, by which Cimkent became a town and Sadara sank to a village, can only have come about in the last two centuries. In 1864, Sadara was sacked as a punishment for a treacherous attack on a small body of Russian.

Geier, *Paläontologie für Turkistan* (Tashkent, 1903), p. 163 et seq., 201 et seq., 314 et seq. On the cotton plantations, *Mitteilungen der Seminars für Orientalische Sprache i. Wiat. Studien*, p. 170. On

Sakris and its neighbourhood see W. Nailbold in *Zapiski vostochn. obozr.*, viii, 339, et seq. (W. DANTONIK).

ČINGĀNE, one of the names applied to the Gypsies in the East, has passed into various European languages in more or less modified forms. The origin of the name is still disputed. It is supposed that the Sassanid Shāhru V (420-438) first brought the gypsies from India to Persia and that they spread thence over the world. In the *Shah-nāma* referring to this in Firdausi and *Yasna* (Spahai) Indians are called *Lari* or *Koli*. Other names commonly used are *Nawar* in Syria, *Shurhal* or *Kartal* in Aleppo, *Frankin*, Egypt and elsewhere. In Egypt the name *Qasbi* is also in use, while the gypsies of Egypt are fond of calling themselves *Barakika* (descendants of the Barakikas). Other less known names may be found in the works of P. Anaslaze and de Huele cited below.

As in other countries, the Gypsies of the East are farmers, copper-smiths, tinkers, pedlars, jugglers and musicians; some are sedentary while others lead a wandering life. There are no reliable statistics of their numbers but they are certainly fairly numerous in Persia and Turkey. Some are nominally Muhammadans, others Christians, but in reality they have their own religion and political organisation, which need not be discussed here as they are outside the scope of this work.

ČINGIZ-KHÂN, frequently written *Čingiz-Khān*, Mongol conqueror and founder of the Mongol world-empire, born in 1158 A.D. (according to the Turco-Mongol annual cycle in the year of the pig, 549-550 A.D.), on the right bank of the Onon in the district of Bulun-Bulday some in Russian territory, about 125° E. of Greenwich. He is said to have received his original name of Temüjin from the name of a prince who was conquered by his father Yisükh-Bulghat about the time of his birth. What else is related of his ancestors and his early youth are written till afterwards and is influenced by his later career; even the oldest form of the Mongol tradition contains the story that the future conqueror of the earth was born into the world with a piece of clotted blood in his hand.

The people, who in the first half of the 12th century shook the foundations of many kingdoms from China to the Adriatic Sea in their campaigns, are called *Tatars* in all contemporary sources, whether Chinese and Muhammadan or Russian and Western European. It seems to be the fact that the Mongols called Čingiz-Khān's line called themselves by this name (the word *Tatar* appears as early as in the Orkhon inscriptions of the 8th century A.D. as the name of a people). The Chinese distinguish three divisions of the Tatar people viz. the white, black and "wild" Tatars. This classification is obviously based neither on their origin nor their political divisions but on the respective degrees of civil-

isation attained by the three groups thus forecast. The white Tatars who lived near the Great Wall of China were under the influence of Chinese culture; the black Tatars led a nomadic life in the district north of the Gobi Desert; and the "wild" Tatars, the "peoples of the forest" of Mongol tradition dwelled in the most northern parts of the present Mongolia and in Transbaikalia, which is now under Russian rule; the life of the civilised was quite as different to these hunter tribes as that of the peasant hound down to till the soil to the nomad. According to the Chinese view Temüjin belonged to the "black Tatars"; Mongol tradition names his fellow tribesmen, the Taimjir among the "tribes of the forest"; in any case it is certain that their abode (on the Onon and Kerulen) was on the frontier between the lands of these two divisions; they were certainly on a lower level than many other tribes of the black Tatars, such as the Kerait, who were converts to Christianity (on the upper course of these rivers and on the Tula) and were more civilised than their neighbours to the south.

The name *Mongol* (in the Muhammadan sources *Moghul* or *Mughul*) first came into use as the name of a dynasty and kingdom under Čingiz-Khān and later came also to be used as the name of a people, being attached, as it seems, to a small principality of the 11th century, the ruler of which had risen against the Kin dynasty then ruling in North China. In the *Annals of the Kin Dynasty* (*Sin-Sai*) a treaty of peace concluded with these Mongols in 1147 is mentioned, and in 1161 a campaign against the Meng-ku-tai (Mongol Tatars). It is apparently in the same principality that the princes in Mongol tradition refer, of the princes who were defeated in battle against the Kin and the Tatars on the lake of Uyur-Khor and whom Čingiz-Khān is said to have afterwards avenged and gained renown thereby. *Khulula-Kaan* (this form was used by the Mongols for the Turk *Kaghan*) is mentioned as the last of these princes; his son *Akhu* is mentioned among the followers of Temüjin (he afterwards, like many others attached himself to the opponents of this upstart and fell in the ensuing conflict).

According to the Mongol tradition, Yisükh (of the family of Kiyat) was connected with this house; whether the relationship actually existed or is a later invention, is a moot point. It is equally uncertain whether Yisükh himself, as the tradition would have us believe, was during the latter years of his life the leader of a large confederacy of tribes. He died in 1202, when his eldest son Temüjin was only 22 years old; immediately after his death the confederacy led by him is said to have broken up. Temüjin, his mother and brothers and sisters, forsaken by all, had to live by hunting and fishing. Čingiz-Khān therefore must have laid the foundations for his later sovereignty alone without having inherited anything from his father. He therefore did not enter on his real career till he was at a much more advanced age than all other conquerors: up to his sixteenth year his name could hardly have been known to any one outside Mongolia.

The founder of the greatest empire, that the world has ever seen, first appears as the leader of a body of adventurers, of noble birth who had elected him their "Khān". The accounts of this part of his life are scanty and very un-

valuable; yet the manner in which the "Khan" and his "subjects" are said to have awarded their pledges to one another is characteristic. His subjects are related to have said to the Khan on his coronation: "If thou wilt be our ruler, we will fight in the forefront in every battle against countless enemies; should we gain beautiful women and girls and noble steeds as booty, we will surrender these to thee. In the chase we will outstrip all others and hand over to thee the animals we take." In the days of his misfortune the Khan, deserted by his faithless followers, spoke in a similar strain, he said he had fulfilled his promises to them: "I have won many kinds of horses and sheep, women and children and given them to you; when we were hunting in the steppe, I organised drives for you and drove the game from the mountains down towards you." Even in the days of his greatness, Ching-Khan had ascended but little from these primitive views; it was always his greatest delight to ride the steeds of his conquered enemies and to give their wives (cf. the Persian text of Rashid al-Din, ed. Barua, *Transl. and. ed.*, 1947, p. 194). The nowhere claims, like the Turkish Khan in the Orkhan inscriptions of the fifth century, to have undertaken his campaigns of conquest for the good of his people as a whole, to have made the people, that was few in number, numerous, the poor rich, and to have clothed the naked.

The events in Mongolia in the second half of the thirteenth century, were, apart from local causes, provoked by the policy of the Chinese government. Like many other Chinese dynasties, the K'ia persecuted the principle of putting down one independent prince with the help of other branches of the same people. The Tatars on the Bayir-Nor, with whose help the Mongol princes were slain, had just at this time become powerful for the K'ia; in the year against this enemy we find Temüjin, who was afterwards to wage war against the K'ia dynasty to avenge the Mongol princes, with whom he claimed relationship, with the prince of the Christian Kienp'ia, signing as the faithful ally of the Chinese government in the year 1203 (the year of the tiger) the war was decided in favour of the allies; as a reward, the Kienp'ia prince received the title of king (Chin, *wang*, *wang* in *wang* among the Mongols as among the Turks of the thirteenth century) from the Chinese general (Hsiang-sung), while his son received the military rank of *shang-shan* (Mong. *shang-shan*). The original names of these two princes seem to have been quite supplanted by these Chinese titles, Temüjin also was given a similar title of honour, which however never attained the same popularity.

The following decade was a period of domestic strife in Mongolia. Apart from the constant feuds between individual princes and tribes, in which Temüjin always fought as a faithful ally by the side of the Kienp'ia prince (he is said to have called him "father"), a more serious quarrel is mentioned; in 1205 (the year of the cock) a considerable number of tribes attached themselves to Temüjin's former blood-brother (and) *Shang-shan*, who was elected ruler by his followers with the title Chinghan. This movement is evidently to be explained as a war of the masses against aristocracy; unlike Temüjin and his allies, Chinghan did not expose the cause of the aristocratic

"hordes", but of the poor and despised "shepherds". The army collected by *Shang-shan* was soon defeated and scattered; but he afterwards succeeded in winning the confidence of the *Shang-shan* and his father and estranging them from their former ally. This breach had the gravest consequences for Temüjin; abandoned by almost all his followers, he had to retire with a small body of faithful retainers to the small lake of *Khalgyun* and drink its bad water. Nevertheless he succeeded in cunningly baffling his opponents and surprising them by an unexpected attack. Ung-Khan and his son *Shang-shan* had to save themselves by flight and afterwards pursued to distant lands, the latter in the west of Mongolia and the son in the district between Kienp'ia and Kienp'ia. All the tribes in the eastern half of Mongolia had to acknowledge Temüjin as their lord (1205; year of the pig).

The faithful few, who had remained true to Temüjin even in the dark days at *Khalgyun*, afterwards enjoyed great privileges as "*Khishigat*" in the empire founded by Ching-Khan. It is important to note that three Muhammadans are mentioned among them: *Shang-shan*, *Shang-shan* and *Shang-shan*; the two latter accompanied their sovereign many years later on his campaign against the kingdom of the *Shang-shan* and rendered great service to him by carrying on the negotiations between him and the *Shang-shan* of these lands; *Shang-shan* must have been much younger than Temüjin, for he married him by 25 years and is mentioned as tutor to his grandson *Shang-shan* (one of *Shang-shan*'s sons). These Muhammadans could only have come to this part of the world as traders; indeed we are expressly told by a contemporary Chinese writer (*Shang-shan*), that the trade between Mongolia and China was in the hands of Muhammadan merchants from the west. These merchants, called by the Mongols by the Turkish word *shang-shan* (lit. "middlemen") enjoyed the favour of Ching-Khan as a later period also, in the sayings recorded to him he advised his subjects to have their sons instructed in all the arts of war as that they may enter on their campaigns with the same confidence as a merchant, sure of the value of his goods, on a trading journey. It may almost be asserted that the counsels of these men, obviously much superior in education and experience to the Mongols, had some influence on Ching-Khan's policy and on the institutions of his empire; but we have no certain information on this point.

The subjection of the western *Shang-shan* of Mongolia was only completed in 1206 (year of the tiger) after the conquest of the powerful tribe of the *Shang-shan* (Mongols, Christians); in the same year according to Chinese authorities, Temüjin adopted the title of Emperor. As a matter of fact, however, neither before his immediate successors, ever regarded themselves as Emperors of China, even after the destruction of the K'ia dynasty, but always as the rulers of a kingdom of nomads only. Like many nomad princes before him (his successors did not follow the custom however) Temüjin also adopted a new name when he became sovereign. Mongol tradition gives us no reliable details as to when he first took the name "*Shang-shan*" and what "*Shang-shan*" really means. According to some, Temüjin already bore this name as "*Shang-shan*" of a band of adventurers, according to

others it was only taken by him after his victory over the Keryit in 1203 and according to others again not till 1206 when he overcame the Naiman. His Chinese contemporary Meng-hung considered the word "Ching" to be a corruption of the Chinese T'ien-tze ("Son of heaven"); another Chinese etymology (Ching-ze, i.e. perfect warrior) is given by R. K. Douglas (*The Life of Temüder Khan*, London 1877, p. 54). According to the Mongol etymology given by Rashid al-Din (cf. the text in the edition by Berzin, *Travels east*, etc. 1922, 1923, p. 12), Ching is explained as a plural formation from the adjective *shu* "strong". As Temüder is said to have received his title as sovereign from a shaman, the word "Ching" is probably derived from the domain of the religious ideas of the Mongols (which has as yet not been properly investigated).

All authorities agree in stating that it was not till 1206, after he had united the whole of Mongolia under his sway, that Ching-Khan summoned his first parliament (*kurultai*) and that it was on this occasion that the insignia of his sovereignty and the institutions of his Empire were first definitely established. As a symbol of the power of the Khan, a banner with some white horsehairs was erected in his camp; according to Chinese authors, there was a black man represented on this banner.

Ching-Khan is credited with saying: "He, who is able to keep his own house in order, is also able to create order in an empire; he, who is able to command ten men in a proper fashion, may also be entrusted with the command over 1000 and 10,000 men". In his own life, Ching-Khan exemplified this saying (which is of course not always applicable) possibly as no one else ever did. Just as he did when leader of a nomadic band, when Emperor, he was able to surround himself with a narrower circle of men from among his vassals, on whom he could rely as upon himself and who continued his work with the same success after his death (unlike the history of all other conquests which were not connected with migration of peoples). The especial importance for the military organization of the Mongols was the creation of a numerous bodyguard, which attained its final form in 1206. The duties of these guards (10,000 strong) in the Khan's camp were devoted to the smallest details; discipline was maintained with the greatest strictness; the supplies these troops were a privileged aristocracy; a private in the bodyguard was higher in rank than the commander of 1000 men of other troops. No officer dared inflict capital punishment on those under him without the sentence receiving confirmation from the Khan. One of these guards was chosen a special regiment of 1000 men who were in immediate attendance on the Khan and only went to war when the Khan himself took the field with the army. A valuable means of maintaining discipline, and of training and testing the soldiers, were the hunting expeditions organized on a great scale, in which all the prescriptions of military discipline were observed with the same exactness as in actual warfare. How strongly developed the spirit of discipline among the Mongol troops was, is evidenced by the work on Mongol history composed about 1230 from Mongol tradition. The unknown author shows the greatest independence of the princes of the ruling house and freely

reproaches them with their faults and crimes; he shows little interest in the conquest of distant lands and gives the meagrest details about these wars of conquest; yet a trifling offence against military discipline committed in Khorkhan (also mentioned in Shiyamundun sources; a body of troops laid against the Khan's orders, stayed behind to plunder a field) seems to him of sufficient importance to be specially mentioned.

It is characteristic of the whole basic policy of Ching-Khan (if this expression may be used here), that he, unlike the Khan of the Orkhon inscriptions, the helper of the "poor and naked", in the instances referred to him, only emphasizes his services to the establishment of order and discipline among the people and in the army. Before his time, the son had not obeyed the father, the younger brother the elder, the daughter-in-law the mother-in-law nor the subjects their ruler, nor on the other hand had the rulers fulfilled their obligations to those on whom they rested. Ching-Khan order created everywhere and his position shifted to each.

It was in the land of the Naiman that Ching-Khan first became acquainted with the use of writs and the art of writing. His Muhammadan merchants were apparently unable to write, as to the case at the present day with most merchants in the east even though their trading enterprises cover much wider areas. There was a Uighur secretary in the service of the Khan of the Naiman, Ching-Khan took him into his service, introduced the use of the Uighur alphabet into his kingdom and had his sons and other young Mongols of high rank taught it. The Mongol Empire does not appear to have been at this period directly influenced by the Chinese civil service system. That the Chinese Empire enjoyed great prestige among the nomads is quite natural. The princess of the house of Kio, who had been given to Ching-Khan as a wife shortly before the taking of Peking and who survived her husband by over 30 years, was not full of face nor did she prevent any children to her husband; nevertheless, as the "daughter of a great Emperor" she was treated with great respect throughout her life, even after the fall of her fatherland (cf. the text of Rashid al-Din, *Travels east*, etc. 1922, 1923, p. 131). Even long after the foundation of his sovereignty, Ching-Khan had no representatives of Chinese culture at his court. As Meng-hung tells us, it was only after 1219 that the Chinese alphabet, even in negotiations with China, began to be used by the Mongols; hitherto any political documents sent to China had been written exclusively in Uighur. Nor does Ching-Khan appear to have had Persian officials in his service before the conquest of Merv (cf. the anecdote given by al-Ussani, *Histoire des Mongols*, I. 413 ff. esp. from Rashid al-Din). Even in Ching-Khan's lifetime, there were young Mongols who had, to all appearance at least perfectly adopted the culture of their conquered foes and were able to speak several languages; the civilization of the nations he subjected always remained foreign to the Khan himself, he never learned a language other than his Mongol mother-tongue.

It cannot be positively proved that Ching-Khan had ever advanced any great schemes of conquest during his early career in Mongolia. His first campaigns against the adjoining settled lands were

raids whose only object was plunder; it was only at a much later period that Mongol rule was permanently established in these lands. The campaigns to the west were, in the first place, undertaken in pursuit of enemies who had fled thither; it was only through the course of events that these campaigns gradually developed into a deliberate war of conquest.

In 1205, Chingis-Khan undertook his first campaign against a settled country, viz. Tangut, the kingdom of Hsin or Hsichia of the Chinese, and returned with rich booty. The war with Tangut was afterwards repeatedly renewed; in 1220 the king of Hsin had to give Chingis-Khan his daughter in wife. Hostilities did not cease till a much later period and it was only in the last year of the conqueror's life that an end was made of the kingdom of Hsin.

The war which began in 1211 with the powerful Kin dynasty in North China lasted equally long. Almost all the forces available were employed from the beginning on this war; only 2000 men remained in Mongolia; the Khan himself and his four sons took the field with the army. After several successes the several divisions of the Mongol army united before Peking in 1215 (according to Rashid al-Din) or 1214 (according to the Chinese dynastic annals); a treaty of peace was concluded and a matrimonial alliance arranged between Chingis-Khan and a Chinese princess; but was renewed again, however, after five months; in 1215 Peking had to surrender to the victorious Khan after a long siege. In 1220 he returned to Mongolia, and immediately after his departure the Kin succeeded in regaining a great part of their kingdom. The continuation of the war was then entrusted to the general Möngke; but in spite of all his reverses the kingdom of the Kin survived and was only finally destroyed by Chingis-Khan's successor.

During the years 1211-1216, when all the Mongol forces were engaged in China, the pursuit of the enemies who had fled to the west had to be suspended. All ~~successes~~ of the Mongol army to the west were therefore obtained either before 1211 or after 1216.

On the immediate west, Mongolia and China were bounded by the great kingdom of the Gökhan of the Kars-Khitai, which comprised all the lands from the Uighur territory (see *supra*, p. 729) to the Sea of Aral. This kingdom was first invaded by the hordes who fled from Mongolia and by their pursuit; the power of the Gökhan, which had already been considerably weakened by the accession of several Muhammadan rulers, notably Muhammad Khwarizmshah, was finally destroyed by these invaders. The prince (*Idghat*) of the Uighur submitted to Chingis-Khan in 1209 as did Arslan-Khan, prince of the Karluk in the northern part of the modern Samirchya (the first Muhammadan ruler to pay homage to the Mongols) in 1221 and later (after 1216) the prince of Almalyk in the Ili valley also. Al-Nah was conquered by the Khwarizmshah Muhammad, the remaining parts of the kingdom of the Kars-Khitai were occupied by Katiak, prince of the Naiman. During the years following, Katiak was able to consolidate his power in these lands without hindrance. Like most of his tribe, he had originally been a Christian; in the kingdom of the Kars-Khitai, he became a convert to "Islamism."

(probably Buddhism). He persecuted severely the Muhammadans of the modern Chinese Turkestan, who had only submitted to him after a long resistance; public worship was entirely suppressed and the population forced to adopt the hybrid dress; rebellious or suspected people, had, like the Protestants under Louis XIV., military inflicted upon them.

It was not till 1216 that Chingis-Khan again found himself free to turn his attention to the west. He entrusted his eldest son Jigüi with the task of following up his enemies who had taken refuge there; the latter's first campaign was not, however, directed against the Naiman but against their former allies the Merkit; this people had been driven by the Mongols out of the land to the east of Balkh and had found an asylum in the modern Khyber valley. Fighting first took place in the western part of this steppe, the present Turgut territory, and the Merkit were almost exterminated; immediately afterwards, however, the Mongol army was attacked by a great army of the Khwarizmshah which had undertaken a campaign from the lower course of the Syr-Darya against the Khyber the predominant people in this neighbourhood. Nowoi, the only historian, who seems well acquainted with the place of the battle and the physical conditions of the steppes, expressly says that this battle took place in 1215-1216, not, as the other authorities say, after the manner of Ömer. The battle was undecided; on the following night, the Mongols vacated the camp, leaving their campfires burning to deceive the enemy, thereby gaining a start and could not be overtaken by their enemies. That Jigüi did not seek this battle we are expressly told; the Khwarizmshah is said to have declared that he considered all unbelievers his enemies; still it is very probable that this attack was not premeditated by him. Whether, how, or when Chingis-Khan received news of this attack, is not known; in any case it did not affect the relations between the two enemies; this encounter was probably regarded by both sides as due to a regrettable misunderstanding. It was not till some years later and quite independent of this event, that Chingis-Khan undertook his great campaign against the kingdom of the Khwarizmshah, which was to prove so fatal to the Muhammadan world.

The causes of this campaign have been often previously discussed, but usually without a sufficient knowledge of the original authorities. Even in the most recent scholarly works, the embassy said to have been sent by the Caliph Nizam al-Din Ali to summon the Mongols against his enemy, the Khwarizmshah, is represented as a historical fact, although we only have a tale but certainly legendary account of it in Michoud (*Vie de Rukn al-Din*, ed. Jacobst, p. 102 et seq.); in the original sources, the story of some such action by the Caliph is only mentioned as a vague rumour, which had become current in the Muhammadan world, just as two centuries later the same charge was laid in Europe by the adherents of the Pope against Frederick II, and by those of the emperor against the Pope (cf. the quotations in J. Cahen, *Introduction à l'histoire de l'Afrique*, Paris 1896, p. 336 et seq.). Chingis-Khan actually did receive a Muhammadan embassy in Peking, in the years 1215 or 1216; but it was not sent by the Caliph but by the Khwarizmshah himself. The

news of the Mongol successes in China had penetrated to Central Asia; the Kh'arizmshah also had heard of them and through his embassy hoped to ascertain more accurate details of the power of the new conqueror. The only historian who gives an account of this embassy (Ibn al-Jawzi, *Tahsilat al-Nafis*, transl. by Harty, p. 279 et seq., 963 A.D.) received his information from the ambassador himself (Rah al-Din Razi).

The caravan of merchants, mentioned by Ibn al-Jawzi (cf. text in Schreier, *Christenliche Persien*, II, 106 et seq.) must have arrived about the same time; whether these merchants had met the Khan in Mongolia or previously in China, is not related. The first steps towards the establishment of commercial relations between the two kingdoms were therefore made from the land of the Kh'arizmshah; the dispatch of an embassy and of a caravan from Mongolia to Central Asia can only be regarded as an answer to these overtures. The fact, that even before 1203 Muhammadan merchants had found their way to Chingiz-Khan, is sufficient proof that commercial relations were of much greater importance on both sides than has generally been supposed.

In the year 1218, there appeared in Ma war' al-Nahr, as envoys from the Mongol Khan, three Muhammadans of whom one had been born in Kh'arizm, the second in Bukhara and the third in China. They were commissioned in host rich presents to the Kh'arizmshah in the name of their sovereign and to announce to him that the Khan regarded him "as the dearest of his sons." Muhammad must have felt insulted by this comparison of the word "son" in intercourse between princes in East Asia as well as in the Muhammadan world denoted a relation of equal superiority; but it is at least very doubtful if Chingiz-Khan, as has been aimed, deliberately intended thereby to irritate the Kh'arizmshah and to make war inevitable. In any case the breach between the two sovereigns was not brought about by this incident. Muhammad is said not to have displayed his indignation during the interview only in the following night he conversed with one of the envoys, from whom he received a reassuring explanation and dismissed the envoys with a favourable answer.

The caravan consisted of 450 men, all Muhammadans; at their head were four merchants, Umar Khayya of Qutub, Hammal of Maragha (in Adhar-badjan), Fakhr al-Din Buzak of Bokhara and Amir al-Din of Herat. All these merchants were massacred in the frontier town of Qash and their goods seized. Whether this massacre was ordered by the Sultan himself, is not certain at any rate, it is nowhere stated that these rulers had in any way merited such treatment, either by espionage or any other conduct requiring punishment. Chingiz-Khan is said to have sent another embassy to demand satisfaction; Muhammad had this embassy also or at least one of its members put to death.

War against the Kh'arizmshah was thus rendered inevitable. According to the Muhammadan historians, Chingiz-Khan took the field with a host of 600,000 or 700,000 men; these figures are, of course, much exaggerated though the Mongols naturally brought no great an army or possible against their formidable opponent; this is evident from the fact that, as in 1211, the Khan himself

and his foot men were with the army; but the eastern parts of his empire could not be easily despoiled of troops, as the war in China was still being continued. Almost half (60,000) of the Mongol army of 120,000 men was at the disposal of the general Möngke; of this army, it is probable that few or no divisions were sent out of China, otherwise the Khan would have made better use of this period. The number of the Mongol standing army which took part in the campaign against the Kh'arizmshah, and there have been not much more than 70,000 men; the series of subjected peoples were probably rather more numerous; two Muhammadan princes, Arslan Khan prince of Kharuk and Sangghak-Tegin, prince of Almalyk, were forced by the Mongols to fight with their armies against their overlordship. What we can ascertain regarding the composition of the Mongol army during the war in Ma war' al-Nahr and other lands, makes it probable that the Mongols and their allies together can hardly have numbered more than 200,000 men. The army of the Kh'arizmshah was undoubtedly superior to that the Mongols, but the individual sections were at variance with their ruler and with one another and thus were unable to resist the troops led by Chingiz-Khan and his generals.

The disastrous advance of the Mongol host through the lands of Isfahan, in which Chingiz-Khan himself went westwards as far as Baghdad and southwards to the banks of the Indus near Peshawar, while bodies of his troops even reached the Sea of Aral, has already been several times fully discussed; there is little to be added to what has been done by A'Chaman (*History of Mongolia*, I, 216 et seq.). The destruction of the kingdom of Kachik by Chingiz-Khan's general Ugei in the autumn of 1218 cannot have failed to influence the course of future events. In Kachik and other towns the inhabitants rose against their oppressors and welcomed the Mongols as liberators; in contrast to the religious persecutions which the Mongols had suffered in Kachik's reign, the Mongol general announced that every one would be free to follow his father's faith. The news of these happenings must have penetrated to Ma war' al-Nahr; as only Muhammadans had taken violence to the massacre at Qash, the Kh'arizmshah, who had in any case no easy task to persuade his subjects that war against the Mongols was a meritorious war in defence of their faith, found his task now made much more difficult.

The manner of warfare employed by the Mongols in all settled lands (China, Western Asia and afterwards in Russia) was always the same; everywhere the defenceless inhabitants of the villages were driven in large numbers to assist the Mongols in besieging the fortified towns; in storming fortifications the Mongols used to drive those unfortunate wretches in front of them so that they received the brunt of the hail of arrows and prepared the way for the army following them. Sometimes prisoners were distributed amongst them to give the enemy the idea of a numerous army. At the siege of Khodjend the number of Mongols present is said to have been only 20,000 while the number of prisoners made to accompany them was 30,000.

Mongol supremacy in Ma war' al-Nahr and Kh'arizm was firmly established in Chingiz-Khan's

that; the other bands of the Khitans had to be again subjugated at a later period. Möngke had himself practically never come in contact with the hostile army; the accounts of his death and flight are probably to be interpreted as meaning that his pursuers lost track of him, otherwise their attacks would surely have found their way to the island in the Caspian Sea which was quite near the standard. The work of the anonymous Mongol writer of the year 1240 shows that the Mongols regarded Möngke's successor, Ughedai, as the king by whom the Mongol empire had been ruled. His legends found similar sources in Central Asia a century later (cf. *Indo-European and Mongolian*, iii. 23 et seq.). Chingis-Khan himself and those immediately around him must have been better informed.

The story, which Chingis-Khan himself commanded, collected and a single version during the whole of the war, it was only against the smaller divisions of the invading host that the Mongolian generals had any ephemeral successes. We have well-authenticated accounts of the general progress of the war; on individual points it is not always easy to settle the relation of the chronicles to the facts, as most of them are based on one source, the *Yü-t'ing Shih-shen-K'uei* of Hsiang-shan which was not written till 1258-1260; this interval of 40 years was more than sufficient for many legends to arise, particularly concerning the death and sayings of the Khan himself. The story has been frequently been repeated even in the most recent scholarly works, of how Chingis-Khan (who was only able to spend his native Mongol tongue) addressed the people from the *minaret* of the place of prayer (*mosque*) as the messenger of God sent to men as a punishment for their sins (cf. Schöfer, *Great Persians*, ii. 124). It is sufficient to point out that we possess accounts of the capture of Hsiang-shan, by these historians whose works are earlier than that of Hsiang-shan and that this striking picture is not to be found in any of them.

Information on the condition of the devastated lands, on the monuments made by the Khan himself and his sons, and on the date of the Khan's return from the neighbourhood of the Hsiang-Kuei to his work at Khar' given by the Chinese hermit Ching-shan, a follower of Taoism, who at the Khan's request had to undertake the journey from China to the Hsiang-Kuei. Chingis-Khan is here interpreted the teaching of this hermit regarding the means to obtain immortality literally; when he received from Ching-shan, in answer to his queries, the reply "There is a way of preserving life; but there is no way of obtaining immortality", it must have been a great disappointment to him; it is evidence of great self-control that he nevertheless treated the hermit with favour, praised his uprightness and even continued to receive his teaching and advice with the greatest reverence, even if he did not always follow it. In March 1223, Chingis-Khan had been in peril of his life while hunting (he had fallen from his horse and was attacked by an infuriated wild bear); the hermit tried to persuade him to give up this sport on account of his advanced years; the Khan promised him to do so but was only able to keep his promise for two months.

Chingis-Khan spent the summer of 1223 in the Kulan-Ishan steppe (in the eastern part of the

modern Sir Darya territory north of the Altai Mountains) and the summer of 1224 on the Irghis; it was not till the year 1225 that he returned home, only to set out again in the same year on his last campaign against the kingdom of Hsia. There, in the eastern Chinese province of Kan-su not far from the town of Lin-shan, a few days before the final surrender of the capital of the kingdom of Hsia, death overtook Chingis-Khan in the first half of Ramadan 624 or August 1227 (the date is variously given). His body was brought to Mongolia and interred in the mountains of Burkhan-Kashan, in the area in which the Khan and Kereit are, the place of burial was, according to Mongol custom, kept secret. Some of his successors were afterwards buried in the same neighbourhood and others of them erected. Much farther to the south in Ordos, between the Great Wall and the Hoang-ho on the river Hsiang-Kuei there stand at the present day two high *steles* to which the bones of the conqueror (according to some in a copper, to others in a silver box), his saddle, his cup and his pipe (or) are preserved and sacrifices are made on certain days to his *spirits*. That this cult and these relics are of late origin, it may of course be doubted; to what period the first mention of them belongs has not yet been ascertained.

Of the physical appearance of the conqueror we possess accounts for the last decade of his life only, the preservation of which we owe to the Chinese historian Meng-shan and the Persian Djirridani. He was distinguished from his countrymen by his great stature, his broad forehead and his long beard. Djirridani also mentions his strong physique and his "cat's eyes", only a few grey hairs remained on his head.

Even in his lifetime Chingis-Khan had appointed his third son Ughedai as his successor, in the empire founded by him, as in all nomadic states, the principle remained in force that the empire belonged not to the ruler, but to the ruling family, and that each member of this family had a right to an *urda* (a number of tribes), a *yurt* (an estate) and *soo* (*soo*) (an income sufficient to the requirements of his court and his troops). This principle was also followed by Chingis-Khan himself; with the exception of the youngest son who, according to Mongol custom, was to inherit his father's "house", i. e. his original estates (the eastern part of Mongolia), each of his sons was allotted definite lands in their father's lifetime. As long as Chingis-Khan lived and his will remained law, the unity of the state seems to have suffered little from these dispositions of territory; his sons appear, not as rulers of separate areas, but as retainers and faithful followers of their father, who was able to entrust each of them with a special branch of administration. Ughedai was supreme in the hunting-field, Chaghadai in the administration of the Mongol tribal law (*yasa*) and Tolui on the battlefield, but shortly before his death a quarrel arose between Chingis-Khan and his son Ughedai, the only one who had not returned to Mongolia after the conquest of the lands of the west. Whether Ughedai had actually rebelled against his father and disobeyed his orders, or whether, as Mongol tradition states, the arrangement was brought about by clandestine intrigues is not clear; certain it is that Chingis-Khan was preparing to go to war against his son when the news of the prince's death

reached Mongolia. According to later authorities he died only six months before his father.

Bibliography: In addition to the works quoted and used by Thomson, *Histoire des Mongols*, Vol. I, the following are particularly worthy of mention: *Itiha'at-i Tatarik-i Najsh*, in the *Bibliotheca Indica* (Calcutta 1864) and translation by Rawley (London 1881); the *Itiha'at-i Tatarik-i Najsh* by the Chinese writer Meng-hung has been translated by W. Wauthier in the *Travels and Voyages of the Chinese*, Vol. IV; the Chinese version of Ching-shan's account of his journey is translated by Palladius, *Travels through the Mongol Empire*, Vol. IV, and by E. Bretschneider, *Missionary Researches from Eastern Asiatic Sources*, I, 33 et seq.; the work, by an unknown Mongol author, entitled *Yung-tse-mi* (*A Secret History of the Yuan Dynasty*) exists in a Chinese transcription and translation and has been translated into Russian by Palladius, *Travels through the Mongol Empire*, Vol. IV, W. Barthold, utilizing all these sources has attempted to draw a clear picture of the personality and activities of the conqueror, cf. *Zapiski russk. akad. nauk*, 1894, 2, 103 et seq.; *Turkistan*, *Itiha'at-i Tatarik-i Najsh*, II, 400 et seq., and the author's notices in the *Beitragungen des Seminars für orientalische Sprachen*, VIII, I, *Ost. Asien*, p. 196 et seq.; Vol. IV, *Wörterb.*, p. 179 and the review by M. Hartmann, *Orientalistische Literaturzeitung*, VI, 246 et seq.; cf. also Shiras and Kura, *The Story of Asia* (London 1899), p. 149 et seq. and R. Sieber, *Turkinghien-Chien, seine Staatsbildung und seine Persönlichkeit* (*Neue Jahrbücher für das klassische Altertum*), 1908, p. 532 et seq.; on the cult in Ordos, cf. G. N. Potanin, *Prikladnoye kharakteristika* (*Proc. Imp. Russk. Geogr. Obshch.*, Vol. 24).

CIRAZH DINKI, with his real name Nazim al-Din Maqbul al-Yayqa, was born in Delhi in India and when he was nine years old, his father died. His mother sent him to Mecca and 'Abd al-Karim Shihab to acquire learning. After the death of his teacher, he went to the feet of 'Abd al-Karim Shihab. At the age of forty he came to India and became the disciple of Nizam al-Din Awliya who esteemed him very highly and called him *Ciragh Dinki* (the light of India) by which title he is known in India. His many discourses have been collected in A. H. 756 = A. D. 1355 by his disciple (transl.) under the title of *Kidair al-Majlis*. He died in A. H. 757 = A. D. 1356.

Bibliography: 'Abd al-Hakim, *Al-Hikma al-Akbar*, p. 80; *Itiha'at-i Tatarik-i Najsh*, p. 200; *Imam al-Din Muhammad, Tawarikh al-Awliya*, p. 200. (M. HANAFI HOSAIN).

CIRAZHAN (Pers. from the Persian *hrazh*, "torch, lamp or light"; "illumination of gardens and houses"; the name of a palace built by Hama al-Mas'ud Tashk, Grand Vizier of Sultan Ahmad III, on the European shore of the Bosphorus between the villages of *Yedigöller* and *Ortaköy*, into which Sultan Mahmud II moved from Topkapı and which was rebuilt by 'Abd al-Aziz. The name is derived from the festivities which used to be celebrated there nightly. The "fountain of lights" was particularly famous; it was the most brilliant of all the illuminations which Mahmud II used to prepare for his sovereign (von Hammer, *Geschichte der Osmanen*, *Seiteler*,

vii, 281, French transl., iv, 64). The palace is built entirely of marble and consists of several blocks of buildings, surrounded by gardens and high walls. The facade facing the Bosphorus is over 300 yards long. The interior was magnificently decorated in the Indian-Mughal style. It was in this palace that the sultan 'Abd al-Aziz was assassinated in 1876 and the deposed Murad V was kept there for 17 years. It was used as a Parliament House for the Senate and the Chamber of Deputies but was completely destroyed by fire three months later on Wednesday, 7th Muharram 1328 = 19th January 1910.

For other meanings see *Vollst. Hist. Pers.*, *loc. cit.*

Bibliography: (Léon Roussel), *De Paris à Constantinople* (*Guide de l'Europe*), p. 311; the *Itiha'at-i Tatarik-i Najsh* of the 10th and 11th Muharram 1328. (M. HANAFI HOSAIN).

CIRCASSIANS. (See *CHINGHIS*, p. 434.)
CIGHTI, Mu'in al-Din Muhammad, founder of a Sufi brotherhood, widely distributed throughout India and one of the greatest of the saints of India, in the name *Al-Bihar* *Shikha* Hind (Sun of the kingdom of India), which is given him, shows Mu'in al-Din belonged to Sindh and was born in 537 (1142), when he was fifteen years of age, his father Shikha al-Din Hasan died; he then lived in various towns in Khurasan and finally came to Baghdad. During this period he made the acquaintance of the most famous Sufis of the time, including Nizam al-Din Kubra, Shikha al-Din al-Sabir, and Amjad al-Din Karamat. In 580 (1183) he came to India but almost immediately moved to Ajmer where he died in 635 (1236); his tomb there became a very popular place of pilgrimage; the great Emperor Akbar made a pilgrimage to it on foot. A splendid mausoleum (*dargah*) was erected which is much visited to this day.

He is not, however, the only Indian saint, who bears the name Cighti; we need only mention Salim Cighti, the contemporary of Akbar, whose *dargah* at Patlipur Sahi in Agra was held in great reverence. Other individuals who bore the name Cighti are cited under their names.

Bibliography: Abu T-Fash, *Al-Bihar*, ed. Calcutta, II, 154 et seq.; *Itiha'at-i Tatarik-i Najsh*, transl. Jorrell, II, 361; *Tawarikh-i Piran*, II, 214 et seq.

CITAL, the name, no longer in use, of a small Indian copper-mining, with *1/10* of a *dan* (q. v.); cf. Yule and Darnall, *Hobson-Jobson*, s. v. *Joetul*, p. 457.

CITRAL = *CHITRA*. In its broad acceptance denotes the upper valley of the Kurur River, from the Naright Pass (lat. 36° 50' N.) to Anarwai at the confluence of the Naright River with the Kurur (lat. 33° 10' N.). This valley, formerly called *Kashkar*, has received the name Cital by extension from the group of villages in its most fertile part. In its widest extension the name also includes *Pamir* as far east as the boundary of Punjab, which was politically united with Cital for a time. Including this territory its east and west extension was from long. 71° 20' E. to 73° 30' E. The *Shanidar* Range crossed by a pass 12,350 feet in height bounds Cital to the East. On the N. W. the boundary is the main Hind-Kush range, culminating in *Tirah* only (24 1/2° N.) south of which the *Bara* pass at the

head of the Lushai valley leads into Kharishti and Badakhshan. In the South the principal approach from the plains of India is by Swat, the Pandjora River, Dir and the Lawari Pass (10,350 ft.). The most accessible side is by the lower Kachir valley and Amdit to Dardistan on the Kabul River. The whole of this route is, by the boundary laid down in 1893, included in Afghanistan. This secluded valley has of recent years been included within the British Empire of India, though still under its own Miltars or princes.

Races and language. The principal race is known as *Ash*, which occupies the whole of Kachir and extends southwards over the Lawari nearly to Dir and E. over the Shandur to Ghaz. The *Ash* are the cultivators and herdsmen, and above them in rank is a privileged race, the *Ashmalik* or 'food-giver' so-called from their duty of supplying the Prince and his followers with food. Above them again are the *Zangit* or *Khuts*, perhaps of Arab descent, who generally supplied a Wazir to the Prince. The ruling tribe is the *Shah-Sanghal* to which belong the Kachir family of Chitral, and the *Khushwakt*, who long ruled in Upper Kachir and Yasin. They are related families, both claiming descent from *Shah Sanghal* who first established the power of the family and himself was descended from *Mir* Aiyub, an adventurer from *Chitral*, who first assumed the title of *Miltar*.

The men of the people are of Aryan race, slender, with well formed features and abundant hair, pleasant and attractive in their manners but treacherous and given to crimes of violence and passion. The women are good looking, and till recently were frequently sold as slaves. The upper classes are perhaps of Iranian descent, but all are assimilated to the common type and speak the same language, the *Khushwakt*. In Yasin this language follows the race as far as Ghaz. The rest of the people are *Shin* except in the North or Warabigat country, where the *Shinghalik*, a language of Mongolian type, is spoken. The *Khushwakt* and *Shin* languages belong to the family described by Grierson as *Pashtu*, and be (agreeing with Kuhn) considers that they are Aryan languages. Another Indian non-Aryan, but representing a stage before the differentiation of these branches. Kuhn however maintains that they are mainly *Iranian*.

A purely Iranian language, the *Vaghli* (akin to the *Munjan* of the *Ghaz*'s group), is spoken by a small number of persons in the Lushai valley, while in the extreme south a number of *Kachir* speaking the *Kalash* language are found.

Chitral was a Buddhist country before the extension of Islam, and traces of Buddhism are still found. The population is now purely Muslim, even the so-called *Kalashik* *Kachir* having been converted. The *Munjan* Sect, identical with the widely-spread *Lama*'s hierarchy, is very powerful.

History. The name *Kachir* as applied to the ruling family seems to have been originally a title, perhaps existing before the rise of the present family. Cunningham and others have identified it with ancient names such as *Kidara* and *Kitila* used by the later Kushans. Vague traditions also exist as to descent from Alexander, due probably to the undoubted fact that Alexander used the route by the Kachir valley and thence to Swat in his invasion of India.

In modern times the family has been divided into two branches, the *Kachir* of Chitral and the *Khushwakt* of Yasin and Upper Kachir. The two branches were formerly at war all through the 18th century, and Yasin was often invaded by the *Kachir*. The *Yasin* chiefs were exposed also to attacks from *Kachir* through Gilgit on their eastern side. The murder of the English traveller *Bagshaw* at Dardistan by *Mir* Wali in 1839 led to his expulsion by his brother *Pakhtun*, who finally fell in 1850, being attacked at once by *Kachir* and by *Amdit* *Kachir*. The latter had come into power in 1837 and gradually extended his dominions. In 1857 he began to enter into relations with the British Government through *Major* *Widdall*, agent at Gilgit, and further agreements were made through *Capt.* *Dundas* who visited Chitral in 1859.

After *Amdit* *Kachir*'s death in 1893 a series of intrigues and assassinations, in which the late *Miltar*'s brother (*Mir* *Afzal*) and his sons were involved, led to the deposition of *G.* (*now* *Sir* *G.*) *Robertson* to Chitral. *Afzal* *Kachir* who first succeeded, was killed by *Mir* *Afzal*, who was shortly driven out by *Nizam* *Kachir* the eldest son of *Amdit* *Kachir*, and took refuge in *Kabul*. At his instigation a third brother *Amdit* *Kachir* murdered *Nizam* *Kachir*, and made himself *Miltar*. *Mir* *Afzal* again appeared on the scene and *Mir* *Nizam* the powerful Afghan Chief of *Bandul* who had seized *Dir*, was crowned the *Lawari* *Pass* into Chitral.

At this time *Robertson* was in Gilgit and *Leuz*, Gordon with a small escort was in Chitral. There were small detachments at Ghaz and *Munjan* in the upper valley. *Robertson* hastened to Chitral and arrived in time to be besieged there with his small force. Some small detachments on the way from Gilgit were destroyed and others besieged. The old fort built of stone and wood, was defended with great difficulty and gallantry by its small garrison from March 7th to April 20th 1895, when a body of about 400 *Shin* under *Col.* *Kelly* arrived from Gilgit having crossed the snow-bound *Shandur* Pass after great suffering and fought actions near *Munjan* and in the *Nizam* *Kachir* *Shin*. A larger force was on its way from *Swat* via the *Shalaband* Pass, Swat, the *Pandjora* river and the *Lawari* Pass, and was opposed by *Mir* *Nizam*, who was defeated and fled into *Afghanistan*, where he was interned by the Amir. *Mir* *Afzal* also fled but was captured by the *Shin* of *Dir* and interned in British India.

The young *Miltar* *Amdit* *Kachir*, who had taken refuge with *Robertson* in the fort of Chitral during the siege, succeeded and his younger brother *Shah* *Kachir* took his place. He was afterwards formally installed in Sept. 1895 by order of the Indian Government under the suzerainty of *Kachir*, and has since ruled successfully. The road made over the *Lawari* is kept up by the Indian Government and relations with Chitral are managed by the *Col.* *Agent* for *Dir*, *Swat* and Chitral under the orders of the Chief Commissioner of the Northwest Frontier Province. The *Yasin* country however is under the management of the *Agent* at Gilgit. The road was closed for a time during the *Swat* *hug* of 1897 but Chitral itself was not involved.

(M. LONGWORTH JAMES.)

CITTAGONG or **CATTAGRAM**, a town and district of India, in Eastern Bengal, at the head of the Bay of Bengal, extending south along the ~~river~~ towards Arakan. Area of district, 2,429 sq. m.; pop. (1901), 1,353,250, ~~of whom~~ 72% are Muhammadans. The town, on the right bank of the Karnaphuli river, 27 m. from the sea, is the second largest in Bengal after Calcutta, and its importance has been increased by the opening of railway communication with Assam. In 1905 it was created the subordinate capital of the new province of Eastern Bengal and Assam. Pop. (1901), 22,440. Lying on the borderland between Bengal and Arakan, Cittagong was not permanently conquered by the Muhammadans until 1686, when Shykh al-Bukhari was victorious over both the Arakanese and Magha and their Portuguese allies or vassals. He changed the name of the town to Islāmatd, and his son built the Dīnā' Masjid. There are three other old mosques.

Bibliography: *Cittagong Gazetteer* (Calcutta, 1908.) (J. S. CURTIS.)

CIWIZADE, the name of two Ottoman ~~ilans~~ — father and son — each of whom rose to be Shaikh al-Islām. One was mūderris in Montegio (Asia Minor). His son Muhyi al-Dīn ~~CIWIZADE~~ had acted as mūderris and khatib in various towns throughout the Turkish Empire before he became khatib of Ankara in 944 and Shaikh al-Islām in 945. After holding this office for three years and nine months, he was deposed because he had placed himself at variance with the whole body of ~~ilans~~, over a *fatwa*. He then undertook the *hajj*, became khatib of Rumli in 952 and died in 954.

His son Muhammad Ciwizade, born in 937, received his education from his father and made the pilgrimage to Mecca with him; he passed through the various grades of ~~ilans~~ and ultimately became ~~ilans~~ al-Islām in 989. He died in 995.

Mustafa Khān, iv. 429, mentions only one Shaikh Muhammad b. Niyā Ciwizade and seems to have confused the two. Except a few *fatwas*, which are preserved in collections of *fatwas*, no products of their scholarship have survived.

COIL. (See ALQAB, p. 299.)

COKA-ADASI "cloth island"; the Turkish name of the island of Cerigo (Cythra).

COMORAS, a group of four islands (Great Comor or Angoshijā, Mohell, Anghulu, and Mayūn) now under French protection, north-west of Madagascar, invaded by the Arabs with the latter (see Verrand, *op. cit.*, i. 44 et seq.) under the name *ḡasīr* or *ḡasīr al-ḡasīr* (frequently explained as *ḡasīr al-ḡasīr*). They

were possibly first brought into contact with Islam by merchants or emigrants from South Arabia in the early centuries of the Hijra. It is not known when Islam was completely adopted in these islands but it was certainly brought from the African mainland as the islands lying off it. In the beginning of the eight century the Comora islands are said to have come under the sway of the so-called Shīrāzī princes, who had settled at an earlier period in East Africa (see C. H. Becker in *Islam*, li. 9). The inhabitants of the islands are — in spite of temporary Shīrāzī influence — like the Saahili whose language is spoken by them, followers of the Shīrāzī sect. Cf. G. Fournier, *Les Musulmans de Madagascar et des îles voisines*, i.—li. (Paris 1891—1902), particularly li. 130 et seq.

CONSTANTINE (Arabic *Kūstantīna*, with numerous variants) a town in Algeria, the capital of the département of Constantine, 330 miles ~~from~~ of Algiers and 30 miles southeast of Philippeville, which is the port of Constantine and is connected with it by railway; it lies in 36° 23' N. Lat. 8° 56' E. Long. (Greenwich). In 1906 the population was 52,247, of whom 13,779 were Europeans, 4,437 Jews and 28,031 natives.

The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the S.E., N.E. and N.W. by deep ravines and connected with the surrounding country on the S.E. only by a narrow isthmus. The plateau itself declines rapidly from north to south. The *Kasba* on its highest point is 2500 feet above sea-level while the *Marabout* of Sidi *Ḥabīb* not a mile away is only 2170 feet high. Of the ravines which represent the moats of this natural fortress the most remarkable is that which runs along the southeast and northern faces of the plateau, at the bottom of which the Roumel flows. The river runs along a narrow gully, a real 'canyon', the walls of which rise sheer upright to a height of 500 to 600 feet, disappears for 1½ miles under three subterranean passages which the water has hollowed out, makes its exit in waterfalls and descends to the fertile plain of al-Hamama. Across this gorge above which on the right bank rises the plateau of Manjra (2340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest. Al-Hakim (*Description de l'Afrique*, transl. de Slane, p. 150) mentions it and al-Idrisi (*ed. de Ouseley*, p. 111) describes it as one of the most remarkable works which it had ever been granted him to see. Consisting of two rows of arches, one above the other, 217 feet high, a road and an aqueduct bringing the water necessary for the town was carried on it. It collapsed in the 13th century, was rebuilt in the 15th by order of Salāḡ Bey under the supervision of a Spanish engineer and on finally breaking down in 1847 it was replaced by an iron bridge 423 feet long crossing the Roumel at a height of 528 feet. Another bridge is at present being constructed farther up the river, to connect the plateau of Manjra where the *casbah* and the European quarter are built, with the quarters previously in existence on the S.W. of the town on the flanks and has suburbs of Kūstāḡ-Asy, a height which commands the entrance to Constantine from this side.

Although these works have sensibly modified the general appearance of the town, it nevertheless

preserves an originality of aspect which is in striking contrast to that of other Algerian towns. It resembles a great Kabyl village rather than an Oriental city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow tortuous streets, which sometimes descend like stairways to the edge of the ravine, the heights of which are crowned by houses. A noisy throng of Kabyls, Jews and Muslims fill the streets and markets. A few monuments of no artistic interest recall the past history of Constantine. The great mosque dates from the time of the first Muslim sovereigns (sixth century A.D.). The mosques of Sidi al-Bekhal, now a cathedral, of Sidi Lakhel and of Sidi al-Kaidi, all of which were built in the sixth century, belong to the Turkish period as does the palace built by Ahmed, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by the natives. The Romans mention the existence of a town named *Cirta* at this place. The semantic origin of the name (*phr* town) would lead one to suppose that the Cuthagians had established a colony there. In any case *Cirta* appears in the period of the Punic wars as the capital of the kings of Numidia; Syphax had a palace there. Maximian and his successors erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the 1st century A.D., P. Silius Nerva, an adventurer, seized *Cirta* on Caesar's behalf and on the latter's ultimate triumph received the town and territory. *Cirta* then became a Roman colony under *Colonia Cirta Julia* or *Cirta Silvanorum*. When it made it his capital after the restoration of the kingdom of Numidia by Augustus and lived there for seven years (24-31 A.D.), ill he was forced to exchange Numidia for Mauritania. *Cirta* still remained the capital of the republic of the 'four colonies', then in the third century A.D. it became that of the province of Numidia *Civitas* or *Numidia Cirtensis* established by Maximianus Hercules in 297 A.D. In the course of the civil wars which followed the abdication of Diocletian, the inhabitants recognized the authority of the usurper Alexander and gave him asylum after he had been driven from Carthage and thus brought upon their heads the wrath of Maximian. The latter took *Cirta* and razed the town to the ground in 310 A.D. It was rebuilt in 313 by Constantine, the successor of Maximian, and received the name of Constantine which it has retained to the present day. At the Vandal invasion, Constantine was occupied by the Barbarians but given back in 442 by Geiseric to the Emperor. After the destruction of the Western Empire, Constantine remained independent, till the Byzantines, victorious over the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chronicles are silent as to the date at which it fell into the hands of the Mohammedans. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the fifth century at the same time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of Ifrikiya, Constantine owed the rule

successively of the governors of Ifrikiya, the Aghlads, the Fajjids, then, when al-Ma'iz had transferred the seat of the Caliphate to Egypt, of the Aghlads. The latter retained it even after the Hammudid had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hilali invasion. The Hammudid al-Ma'iz took advantage of their troubles to seize the town and include it among his own possessions. The successors of al-Ma'iz retained the town for a century in spite of a revolt instigated by Bel Bar, uncle of the Emir al-Nasr. After the capture of Bougie by the Almohads, Yahya, the last king of Bougie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to 'Abd al-Mannan whose troops took possession of the town. Attacked unsuccessfully by 'Ali b. Ghanniya in 1185 A.D., Constantine remained faithful to the Almohads till the final collapse of the empire founded by 'Abd al-Mannan.

At this period, Constantine was a very prosperous city: "Constantina" says al-Bakri, "is a large and ancient town with a numerous population; it is inhabited by various families who were originally part of the Berber tribes established at Mada, in the land of Nedjra and in that of Gafsiya, but it belongs to certain Ketanlan tribes. It has rich herds and a prosperous trade" (op. cit., p. 150). Al-Tudai describes Constantine as a populous and commercial town. "The inhabitants" he continues "are rich; they have agreements with the Arabs and co-operate with them for the cultivation of the soil and the preservation of the harvests. Their subterranean storehouses are so good that corn may be kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to foreign countries..." (op. cit., p. 311).

When the Almohad Empire was broken up, Constantine recognized the authority of the Hafsid Abi Zakariya who was proclaimed at Toul in 1230 A.D. (cf. the article *Toul*). The history of the town under the Hafsids (sixth-seventh centuries) is very confused and disjointed. The rulers of Tunis attached great importance to the possession of Constantine; they frequently lived there and delighted in improving it; they usually entrusted its government to princes of their own family. Nevertheless in spite of their precautions and trouble they lost it on several occasions. In 1282 A.D. for example, in the reign of Abi Isah, the governor Ibn al-Wa'ir rose against the sovereign of Tunis, who had to send his son, Abi Faris, to retake the town by force. In 1283, the inhabitants opened their gates to the pretender Abu Zakariya of Bougie. In 1305 at the suggestion of the governor Ibn al-Amir, they submitted to the Hafsid sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the King of Bougie, Abu Z-Bakr. The latter succeeded in restoring to his own advantage the unity of the Hafsid kingdom in 1307 A.D. and for some years maintained peace in the Eastern Maghrib. But new troubles were not long in arising. From 1312 to 1319, Constantine was almost independent under the authority of the ruler Abu Ghannu, who succeeded in placing on the throne of Tunis a prince of his own choosing, Abu Yahya. In 1325, the revolt of another viceroy, Abu al-Kadim, exposed the inhabitants to an attack,

which proved unsuccessful, from the 'Abd al-Wadides. The war which then broke out in the Eastern Maghrib between the ~~Marabuts~~ and the 'Abd al-Wadides as well as the good government of the ~~governor~~ Abu 'Add ~~1000~~ and Abd Zaid, son and grandson of Abu Yahya, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with difficulty, was again broken in the middle of the sixth century by Masfud expedition. Abu 'l-Hasan entered Constantine without striking a blow and supplanted Hafsid authority by his own in 1347. The defeat of Abu 'l-Hasan at Kairawan brought about a revival in favour of the Hafsids and one of them, al-Fajl, took advantage of the occasion to seize the town. He held it for only a short time. The former Hafsid governor, Abu Zaid, set ~~in~~ liberty by ~~Abu~~ ~~Isaac~~, retaken Constantine, then abandoning his protector, proclaimed Suljan a son of al-Husan named Tahhu. Soon afterwards, Abu Zaid's brother, Abu 'l-Abbās, overthrew him and deposed Tahhu. He in his turn took the title of Suljan, repulsed the Banu Awlad and Salawish Arabs, ~~who~~ had laid siege to Constantine in 1355, but could not prevent the town being taken by ~~Abu~~ ~~Isaac~~, who came to possess against it. He regained it from the Marabuts in 1360. Deposing Suljan of Tunis in 1370, Abu 'l-Abbās maintained peace in the province of Constantine till his death. His successor Abu Faris had on the other hand twice to reconquer Constantine from his brother Abu Bakr, who had seized it with the help of the Arab tribes.

We have no exact details on the history of Constantine in the sixth century. Rebellions against Hafsid rule were, it seems, less frequent than in the preceding century but far more numerous than real. During this period the ~~most~~ masters of Constantine were the chiefs of the Awlad Hawla, a section of the Arab tribe of Banu Awlad to the town itself the supreme ~~the~~ authority was in the hands of a few families, clients of the Awlad Sa'ad. Such, for example, were the family of 'Abd al-Mu'min of Marabut origin, whose chief, excommunicated by hereditary right the functions of ~~Shah~~ al-Jalili and Amir al-Kabir, (leader of the caravan of pilgrims to Mecca); the family of Abu Hilla, whose members had arrogated to themselves the duties of ~~Kadi~~, that of the Ben al-Faggon (or Lafgon), famous as legal authorities.

The arrival of the Turks in Northern Africa reopened an ~~era~~ of troubles for Constantine. There were two parties in the field. The one, led by the 'Abd al-Mu'min, ~~was~~ favourable to the maintenance of Hafsid authority; the other, led by the Lafgon, invited the Turks thither. According to al-Vayasiyat, a first attempt by the Turks to occupy the town ~~was~~ made as early as 1517. According to M. Mercier, Hassan, one of Khair al-Din's lieutenants, forced the people of Constantine to recognise his master's authority in 1519 or 1520. The submission of the town was only an ephemeral one, however, for in 1521 a representative of the Hafsid sovereign of Tunis was raiding in the town. It is not till 1534 ~~that~~ the establishment of a garrison definitely marks the occupation of Constantine by the Turks. Their authority ~~was~~ not firmly established without difficulty. The partisans of the Hafsids did not bow at once to the Turkish yoke but sought to rid themselves of their new masters. At the end of

1567 or to the early months of 1568 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muhammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest signs. The 'Abd al-Mu'min who had instigated it, were deprived of their privileges, and from that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1642, taking advantage of the difficulties caused to the Turks by the revolt of the Kabyle and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the Beylik of the East in the sixteenth century, Constantine enjoyed complete tranquillity for the half century following the period of government of the Bey Farhat (1637). But the intervention of the Algerians in the affairs of Tunisia ended in expelling Constantine to the outskirts of its neighbors. In 1700, Masud Bey of Tunis, victorious in two battles against 'Ali Khadija Bey of Constantine, laid siege to the town and blockaded it for three months. The Bey of Algiers at length received warning of the precarious situation of the town by a messenger, who had succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not ~~meet~~ sweet.

The sixteenth century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather ~~than~~ as feeble representatives of the Bey of Algiers. Such were Kulu Hasan Bey, called Bu-Kamla, (1713—1736), Hassan b. Husain called Bu-Hanak (1736—1754), Ahmad al-Kuli (1756—1771) and above all Salah Bey (1771—1792). Constantine owes to them many public works and buildings of general interest. Bu-Kamla built the mosque of Sidi al-Ghual; Bu-Hanak made new streets and built the Mosque of Sidi Lahjar. Salah Bey rebuilt the bridge over the Roume and the Roman aqueduct bringing the waters of the Djebel Wagh to the city; he also built the mosque and madrasa of Sidi al-Kaoui and commissioned Italian architects to build him a palace adorned with salmons and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Salah Bey himself, deposed by the Bey of Algiers, to whom he had given offence, tried to stir up a rebellion but perished miserably. Seventeen Beys ruled Constantine in the period 1792—1826. Some of them only held office a few months or even a few days; almost all were distinguished by their cruelty and rapine. Constantine suffered much from this state of affairs; public works were abandoned; commerce was ruined; the lives and property of the inhabitants were continually endangered. To the internal dissensions were soon added attacks by the surrounding peoples. The Kabyle hordes of the Marabut Bel Arach (the al-A'rah) rose against the Turks and advanced up to the walls of Constantine in 1804. A Tunisian army commanded by Sidi al-Kabkabi besieged the town three years later. It was blockaded

for two months (April—May 1807) and was once bombarded. The approach of a relieving army from Algiers caused the Tunisians to raise the siege and in their retreat they lost 1567 prisoners and all their artillery.

Ahmad, the last Bey of Constantine, possessed three qualities which were lacking in his predecessors: intellectual, active, ambitious and energetic; he unfortunately made himself hated by his acts of cruelty and by the exactions levied by him to raise funds to build a palace in Constantine to replace the old *Hâr al-Bey*. After the French occupation of Algiers, he sought to profit by the disappearance of the *Odjak* to create an independent principality in the east of the Regency and had the title of *Pasha* given him by the Ottoman Porte. Deposed by a decree from General Clausel on the 25th December 1830, he nevertheless retained possession of Constantine. The hesitation on the part of the French government, which tried to come to terms with him for his voluntary submission and after the failure of these negotiations did not wish to enter on a dangerous campaign, delayed his fall. But in 1836, Marshal Clausel, then governor-general of Algiers, obtained permission to undertake an expedition against Constantine. Leaving Bône on the 2nd November the French troops arrived without difficulty in sight of the town and took up a position on the heights of *Manâra* and *Kuliat*. Two sorties by the besieged led by *Shi Arara* (1836), *Shah* of the Bey, were repulsed; on the other hand, two attacks by the French on the night of the 22nd-23rd December also failed. Clausel decided to raise the siege and returned to Bône after a *siège* which rendered very difficult by *siège* weather. This check was made good the following year. An army under General Damrémont laid *siège* to Constantine on the 6th October 1837. Batteries were planted on *Kuliat Ali*, so as to make a breach in the south-east front of the town. Damrémont was killed on the 12th October; but his successor, General Valée, ordered no assault on the 13th. The town was taken after fierce fighting by columns led by Colonels Combe and Lamontagne. Ahmad Bey who had left Constantine on the approach of the French troops, retired to the south where he held the country against the French for eleven years longer. It is said that the siege of 1837 was the *siège* which Constantine had to endure.

After the French occupation, Constantine, the administration of which had been entrusted to a *Shahin* under the supervision of the military authorities, became the headquarters of a *commandement militaire* and the base of French operations in the eastern province. At first under military law, it was then given a municipal government in 1848 and became the capital of the *département* in 1849. Since then the town has developed considerably, but in spite of the growth of the European population, the natives still hold a more important position in it than in other townships of Algeria with the exception of *Alger*. Constantine has in fact remained a market and centre of supplies for the tribes of the east; its native industries have received and supply the population of the surrounding country with cotton stuffs and articles of leather.

CONSTANTINOPLÉ.

CONSTANTINOPLÉ TO THE OTTOMAN CONQUEST (1453).

The Name. The city, which Constantine the Great on the 11th May 330 raised to be the capital of the Eastern Empire and which was called after him, was known to the Arabs as *Qustantiniya* (in poetry also *Qustantina*, with or without the article); the older *Qustantion* (*Qustantia*, in various spellings) was also known to them as well as the fact that the later Greeks, as at the present day, used to call Constantinople simply *hê polis* as "the city" par excellence (*Massé*, l. 357; Ibn al-Athir, l. 235; Abu 'l-Fida, ii. 1, 2; Dimichli, p. 241, 250; Ibn Hisham, ii. 431). From *Qustantiniya* the Turkish *Qustantiniya* (*Qustantini* in the *al-Athir* and in *Qustantini*; *Qustantini* in Abu 'l-Fida, Dimichli, Yâqûti, Ibn Hisham; Clavius, p. 22, ed. Braun; *Qustantini*; Schlißberger, p. 43, ed. Langenstiel; "Constantinople" between the *Chroton* *Qustantini* and the *Thürcken* *Qustantini* *Qustantini*). In the 15th century we find the form *Qustantini* "Qustantini" appearing. *Qustantiniya*, with the variant *Qustantiniya*, has remained the official designation to the present day on coins of *Qustantini*; the form *Qustantini* appeared on coins from Ahmad I to Selim II; in the written language and in more refined conversation the form *Qustantini*, less frequently *Qustantini*, "the Gate of Bile" is used. *Qustantini* has survived in everyday speech and in the narrowest sense it applied to Constantinople proper, in opposition to *Qustantini*, viz. Galata and Pera, as was the usage even in the Sultan's times.

The Campaign of the Arabs against Constantinople. It is said that the Prophet himself had foretold the conquest of Constantinople by the Ishmael. The Ottoman historians address the following *fatwa*: "Ye shall conquer Constantinople; *Qustantini* be upon the price and the army to whom this shall be granted!" (*Fatwa*, *Qustantini*, p. 250 et seq.; *Qustantini*, p. 124; *Qustantini*, l. 32 et seq. 73; *Al-Bihar*, *Qustantini*, l. 2 et seq.); *Qustantini* *Qustantini* is given as authority; older references are wanting. As a matter of fact, the Umayyads set about this enterprise with *Qustantini* energy and valour, that inspired *Qustantini* early warriors of Islam. In the year of the world 616 (beginning 1st Sept. 633), according to Theophanes, p. 345, a fleet was equipped in Tripoli "against Constantinople" which under the leadership of *Qustantini* (i. e. Basar ibn Abi Asit) defeated the Greek fleet at Phenicia (Finike) on the Lycian coast; but it did not reach Constantinople; at the same time *Qustantini* had invaded Dyanthio territory.

In the year 64 A. H. or 636 of the world (664 A. D.) took place the campaign of 'Abd al-Rahman b. Khalid who advanced as far as Pergamon; the admiral Basar ibn Abi Asit, so-

cording to Arabic sources, it said to have reached Constantinople (Yabart, l. 86).

In the course of the next years, Faḡāla b. 'Ubayd advanced as far as Chalcedon, and Yazid, son of Mu'awiyah was sent after him (according to Theophanes in the year 659 of the world, beginning 1st Sept. 666; according to Elias of Nisibis Yazid appeared before Constantinople in 54 A. H., which began on the 18th January 673); a fleet commanded by Huzayfah b. 'Abd Ar-Rahmān supported this enterprise. In 672 a strong fleet cast anchor off the European coast of the Sea of Marmora under the walls of the city. The fleet attacked the town from April to September; they spent the winter in Cyprus and renewed their attacks in the following spring until they finally retired "after seven years' fighting". A great part of the fleet was destroyed by fire; many ships were wrecked on the journey (Theophanes, p. 353 et seq.). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 667 and the fleet to have finally retired in 673. The Arab historians vary between the years 48, 49, 50 and 52 A. H. and place the death of 'Abd al-Azīz in the year 50, 51, 52 or even 55 A. H. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unaccountable.

This siege has acquired particular renown in the Arab world as the exploit of 'Abd al-Azīz Khalid b. Yazid fell in it and was buried before the walls of Constantinople, the finding of his tomb during the final stage by Mehemmed II was an event only comparable to the discovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of 'Abd al-Azīz is first mentioned by Ibn Kathīr, p. 140; according to Tabari, III, 2324, Ibn al-Azīz, III, 381, Ibn al-Jawzi and Karatī, p. 408, the Byzantines respected it and made pilgrimages to it in times of drought to pray there for rain (ṣalāt); the Turkish legend is given very fully in Leunclavius, *Hist. Mus.*, p. 41 et seq. and in the palmating manuscript by Ibn al-Azīz, *al-Azīz al-Azīz al-Azīz* A. H. 1257 A. H.).

There was a truce for over 40 years between Byzantium and Arab until in 97 A. H. (beginning 3rd October 715) Sulaiman b. 'Abd al-Malik came to the throne. A *ḥudūd* was at this time current, according to which a Khalifa who should bear the name of a Prophet was to conquer Constantinople. Sulaiman took the prophesy to refer to himself and equipped a great expedition against Constantinople. His brother Maslama led the army which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Abydos and surrounded Constantinople. The Arab armies anchored partly near the walls on the coast of the Sea of Marmora and partly in the Bosphorus; the Golden Horn was barred by a chain. The siege began on the 25th August 716 and lasted a whole year; Maslama then found himself forced to retire owing to the attacks of the Bulgars and the scarcity of provisions (Theophanes, p. 385—399; full details in Ibn al-Azīz, ed. de Goeje, p. 24—33; cf. also Tabari, II, 1314 et seq.; Ibn al-Azīz, IV, 37 et seq.; cf. the vivid account in Galax, *Byzantine and Ottoman*, p. 49—64). There are

many references to Maslama's hazardous march among the later Arabs. Even several centuries later they knew of "Maslama's Well" at Abydos where he had encamped (Mas'udi, II, 317; Ibn Khurdaḡibih, 104); and the mosque built by him there (Yāqūt, I, 374). 'Abd al-Azīz b. Tayyib, the first Muslim to lead an attack on the "Gate of Constantinople" was one of Maslama's comrades (Ibn Khurdaḡibih, p. 275). Maslama is said to have made the building of a house near the imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Istanbul (Mukaddas, p. 247; Ibn al-Azīz, I, 18; Dimishqī, p. 227); finally he is credited with building the Tower of Galata (Dimishqī, p. 228) and the "Arab House" in Galata (Ibn Khurdaḡibih, *Tarikh al-Furūd*, year 97 A. H.). Ewliya and his authority have made two sieges out of Maslama's campaign and embellished their narrative with incredible stories. Norked (died 1044 A. H. = 1634) discusses Maslama's campaign in the fourth section of his *Pentateuch*, following Muḥyī T-Dīn al-'Asadī's *Masama*.

Only on one other occasion did an Arab host appear within sight of Constantinople, namely in 784 A. H. Harun, the son of the Caliph al-Mahdi, had marched through Asia Minor unopposed and encamped at Chrysopolis (Scutari). The Emperor Irene who was acting as Regent for her son Constantine, hastened to make peace and agreed to pay tribute (Theophanes, p. 455 et seq. under the year 624 of the world (781—782); Baladhuri, p. 168; Yabart, III, 504 et seq.; Ibn al-Azīz, VI, 44; A. H. 185, beginning 26th August 781). Ewliya and his authority (Muḥyī T-Dīn 'Asadī, first 957 = 1550 according to Rieu, *Crusades* etc., p. 46 et seq.) have made no less than four regular sieges of Constantinople out of the campaigns of the Arabs under al-Mahdi and Harun against the Greeks. After the second, Harun gained a quarter in Scutari by a trick similar to that by which Uthman gained the city of Carthage (Leunclavius, l. c. 54; Ewliya, I, 81 = *Crusades* etc., l. 1, 25); the same story is given by Chavix, p. 23 of the settlement of the Goths in Galata, and Ewliya, *Crusades* etc., l. 2, 66 of the building of Rumeli Hisar by Mehemmed II.

The Arab accounts of Constantinople date from the 7th century. They considered the Dardanelles, the Sea of Marmora and the Bosphorus as a single "Canal" (*ḥudūd*), connecting the Mediterranean with the Black Sea. Ibn Khurdaḡibih and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Scutari in time of war that is referred to (see below). The high double walls of the city with their towers and gateways, including the Golden Gate, the Aya Sofia, the Hippodrome with its monuments (notably the Egyptian Obelisk), the four *ḥudūd* horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantine" (really of Justinian, the so-called Augustus) are described by them in general or less detail. Ibn Khurdaḡibih and Mukaddas devote particular attention to the Praetorium where their countrymen, prisoners of war, were kept under a strict custody and the Mosque attributed to Maslama (cf. Yāqūt, I, 709, A. H. 304 and Constantinian Porphyrogenitus, *de Cerim.*, l. 592 and 767). The most detailed account is that of Ibn al-Wardī (11th century); he men-

from the famous Obelisk of Porphyrogenitus, the Pillar of Arcadius and the Aqueduct of Valens and also knew that the Golden Gate was closed. The *Diogenes* (ii. 431—444) described from his own observation the domestic life of his time; the latest notices are given by Firdausî (died 817 A. H.) in his dictionary.

Apart from prisoners of war, numerous Mohammedan merchants and envoys from the Caliphs and other Mohammedan rulers sojourned in Constantinople; the Mamizet Sultans occasionally banished their troublesome persons with their families; Seljuk Sultans and pretenders (Kilij Arslan II, Kaiikhusraw I, Kaiikhusraw II) repeatedly spent long periods in Constantinople; remarkable details of their life in the capital are given by Byzantine writers and in the *Sahih* historian.

No definite traces have as yet been discovered of the two sieges by the Arabs and the residence of Arabs and other Mohammedans in Constantinople; in particular the Mosque of Maslama has not come to light; it is first mentioned by Const. Porphyrog., *de administr.*, ch. xxi. (*Anna Corpore*, p. 101, 22); it was destroyed in a popular rising in 800 and pillaged by the Crusaders in 1203 (*Vitenus Chron.*, p. 696 and 731, ed. Bonn). According to Ibn al-Athir, *ib.*, 581, n. 2, 13 (whence Abu l-Fida derives his information) it was restored in 441 A.H. (1049-1050) by Constantine Monomachus at the request of the Seljuk Toghrul-Beg. According to Maheut (*l. 177*, *ib.* *Quatremaire*) Michael VIII Palaeologus built a mosque about 660 (1261-1262) which the Mamizet Sultans had built equipped in splendid style. The accounts of the 'Arabians' and other buildings by the Arabs in Scutari belong to the domain of fable.

CONSTANTINOPL.E AND THE OTTOMANS.

The Conquest. More than 500 years had passed since the Arabs under Hisham had encamped on the Bosphorus, when the Ottomans made their first attempt to take Constantinople, which with its immediate neighbourhood formed all that was left of the great Eastern Empire.

Bayezid I. besieged the walls in 1396 for several months but raised the siege on hearing of the approach of a relieving army of French and Hungarians under Sigismund I. After the defeat of this army at Nikopolis (25th September 1396) the siege became a close blockade, which lasted several years till the Emperor submitted to Bayezid's demands (about 1400); among other conditions the Turks were allowed to have a quarter of their own, to sit under the separate jurisdiction of their *Paşa* and to build a mosque. Byzantium was relieved of its tormentum by the appearance of Timurlang and the capture of Bayezid in the battle of Angora (20th July 1402). (The only certain date is that of the siege in 1396; the accounts in the original authorities of the events after the battle of Nikopolis are incoherent and the proper chronological order cannot be determined).

Murad II was the first to lay siege to the city again but he attacked it from June to the beginning of September 1422 in vain. A peace was made which lasted till the death of the Sultan.

It was reserved for Mohammed II, the son of Murad II, to conquer Constantinople and overthrow the Byzantine Empire.

To cut off supplies and possible relief by sea,

in the year 1452 he built the castle of Rumeli-Hisar (then called *Yedigöller* 'the barrier of the strait') on the European shore of the Bosphorus. The siege began on the 9th April 1453 and ended on Thursday the 29th May. The main attack was directed against the land-walls between Topkapı, the 'Gate of the Cannon', and the Gate of Adrianople, where the heavy artillery of the besiegers had made a great breach. Two episodes of the siege have become particularly renowned: the entry of the Turkish fleet into the Golden Horn, which was closed by a great chain, by being dragged overhead (from the Bay of Dolma-Baghçe over the ridge of Pera into the valley of Kama-Pasha) on the night of the 21st-22nd April and the discovery of the grave of the Anzari Ahi Aliyah by Sheikh Ak-Same al-Din.

The conquered city was given over to plunder and devastation for three days; the Sultan then made his entry, offered up the Friday prayer in the Ayı Sofası and returned to Adrianople after appointing a *vali* (governor of the city).

The mosque which of Galata which had remained neutral during the siege capitulated a few days after the fall of Constantinople.

On only two occasions since it passed under Ottoman sway has a hostile foreign force appeared before the capital: on the 20th February 1807, the English Admiral Duckworth, who however retired to days later without making a serious attack, and in 1877 the Russian army which did not occupy the city but encamped in the suburb of San Stefano.

Constantinople under Ottoman Rule. The Serai and the Government Buildings. In the years immediately following the conquest, Mohammed II. employed himself in reoccupying the deserted town and making it the royal residence. From the inhabitants who were transplanted from Karaman, arose the names Karaman and Aghasal of two quarters in Istanbul; the Conqueror also brought the inhabitants of Kaffa, Mytilene and other islands to the capital; there was also a great influx of Armenians, Persians and other races to the city. In the period following, large numbers of Jews and Arabs, who had been driven from Spain, settled there (cf. the very fantastic statements in Ewliya, *Travels* etc., I. 48 et seq.). The Greeks, who had left the city before and after the last siege, gradually returned. The imperial Byzantine palaces were allowed to fall into ruin; in their place Mohammed built a Serai in the centre of the city on the third hill (*Catibulata*, II. ch. 1, § 2; *Dease*, p. 317; according to Ewliya, *Travels* etc., I. 1, § 50: from 858-862 = 1454-1456); in a later period after the completion of the new Serai it was called the *Eski* (old) Serai and was used for several centuries — till the reign of Mahmut II. — to provide apartments for the women of dead or deposed Sultans; it then became the residence of the *Serasker* and was taken down early in 1870; on its site was built the Seraskerat, but the ancient name — *Eski Serai* — is still popularly applied to the latter.

Comparatively early — in 872 A.H. = 1467-1468 it is said — Mohammed began to build a second Serai in the midst of extensive gardens on the promontory between the Sea of Marmara, the entrance to the Bosphorus and the Golden Horn and on the whole on the landscape by

a strong, high wall (completed in Ramadan 833 A. H., which began on the 26th Nov. 1478); on the side ~~of~~ the sea, the sea wall marked the limits of the Serai. Of the buildings of the Conqueror only the Çimîl (i.e. Science)-Kiosk, finished in September 1472, has survived; it is now attached to the Imperial Museum. On the site of the New Serai and its individual buildings, cf. the authoritative essay by 'Abdurrahman Sheref in Vols. I and II of the *Revue Historique de l'Institut d'Histoire Ottomane* (with a Map).

Within this was the Serai proper, situated on the top of the pre-Byzantine Acropolis, formed a separate complex of buildings with three great courts, which were entered by so many gates (*bab-i Humâyet, Bab-i Kudsî, also called Bab-i Salâm, and Bab-i Saâdet*). Around the third court were the private apartments of the Sultan with the Harem, ~~the~~ treasury, the chambers containing the sacred relics of Islam (*Abdâr-i Sharîf Odâi*) and in the court itself was the hall of audience (*dar-ı adalî*); the hall in the Harem was built on the second court with the "sacred treasury" (*Taş-ı kudsîye*); the ~~third~~ court contained amongst other buildings the armory of the ~~Sultan~~ (*Ordukhâna*, formerly the church of Irene, now a museum of arms) and after 1633 the ~~mausoleum~~ (*Zerkhâna*). The later Sultans laid out a whole series of palaces and kiosks, partly on the heights, partly in the lower lying parts of the Serai, not close to the sea at the "Gate of the Cannon" (Tophkapı); the best-known are the Baghdad Kiosk outside the third court of the Serai, built by Murâd IV, the Topkapı Kiosk on the Sea of Marmara and the Yald Kiosk on the Golden Horn, the two latter now being destroyed. The palace of Topkapı which was used as the Sultan's winter residence till the beginning of the 18th century, perished in flames in 1862. Mahmûd II was the first to reside in Beşiktaş; his successor, 'Abd al-Majîd, built ~~the~~ splendid palace of Dolmabahçe there, and his successor 'Abd al-Azîz the palace of Çirâğlın which was destroyed by fire in 1910; 'Abd al-Majîd II (deposed in 1909) returned to the Yald Kiosk on the heights above Beşiktaş. Since then Mehmed V ~~has~~ occupied the palace of Dolmabahçe. To distinguish it from these modern palaces, the sea, which has just been described, with its buildings ~~is~~ called Old Serai by Europeans; the Turks give it the name Topkapı ~~and~~, formerly Yenî Serai.

Down ~~to~~ the year 1634, the Grand Vizers ~~had~~ no special official buildings allotted to them; the business of state, which did not come before ~~the~~ Harem, was transacted in the Grand Vizer's private house. In 1634, Mehmed IV presented ~~the~~ Grand Vizer Dervîsh Mehmed Pasha with a large building opposite ~~the~~ Alai Kiosk ~~and~~ the Serai; this became the office of the Grand Vizer under the name "Sublime Porte" (*Bâb-i 'Alî*, in popular language, *Bab-ı or Paşa Kapısı, Pârlâzâ Portu, Hehr-i Pfortu*). In ~~the~~ course of centuries it has been repeatedly destroyed wholly or in part by fire, the last occasion being on the 6th February 1911.

Besides the Grand Vizer the Agha of the Janissaries had also his separate Porte, the *Ağa Kapısı* near the Janissary barracks and the *Sâimiyâ-Mosque*; built by Süleimân I. it was burned in 1730 along with the "Fire Kiosk" (*Yungkuş Akadî*) and rebuilt by Mahmûd I. After the

disbandment of the corps of Janissaries the building was given to the Şahîh al-Islâm in 1823 as an official residence (*Şahîh al-Islâm Aghası, Bâb-i Sâimiyânî*) and the famous Fîr Kiosk was taken down, the Serasker Tower being built on the site.

The government offices which were instituted in the 16th century on a European model are now housed in various buildings, mostly quite modern of no historic interest; only the Defterkhâna (land-registry office) on the Atmaidân with the registers compiled by Süleimân I, the so-called *کوتکات*, for the whole kingdom, deserves mention.

The Mosque 1. The Aye Sofya, see the separate article, p. 524.

2. The Mehmedîye, built by the Conqueror on the site of the Church of the Apostles and the Mausoleum of the Byzantine Emperor on the fourth hill in the years 867—875 (1462—1470), famous for the various ornaments attached to it, including the "Eight Mosques". At the Mihrâb there is also the tomb of the Conqueror; a second türbe contains the tombs of Gâlibahâr Sultân, mother of Bayazîd II, of two *Serâfil* (odalisks) and of a daughter of Mehmed II. According to a tradition, which is not corroborated elsewhere, the architect was a Greek, named Christodoulos; for various legends according to which the Sultan had the architect slain or mutilated, see Kantemir, *Gesk. des Osm. Reiches*, p. 158 and Ewlyâ, *Travels* etc., I, 68. — The step-mother of the Conqueror, the Serbian princess Maria, daughter of George Branković, who remained a Christian ~~after~~ entering the Sultan's harem, is said to be interred in the first türbe.

The earthquake of the 22nd May 1766 caused the cupola of the Mosque to collapse and the title of the Conqueror was severely injured; the Mosque was then subjected to a thorough renovation which occupied almost five years (1767—1771).

3. The Mosque of Bayazîd II on the Great Bazaar with the ~~cupola~~ of the building and his daughter Râşîdâ Sultân, built from 1501—1506, famous for the market, which is held in the outer court during Ramadan and for the pigeons which nest in it.

4. The Selâmîye, on the 6th hill, above the Fâzîl quarter, with the türbe of Selâm I, completed by Süleimân I in 1522; in it is also the tomb of Süleimân 'Abd al-Majîd.

5. The Mosque of the Petron, (*Şahâzâde Aghası*), on the third hill, built for Süleimân I by the architect Sinân (q. v.) in 955 (1548—1549) in memory of Prince Mehmed who died in 949 A. H., with the türbe of this prince and his brother Mahmut (died 960 A. H.) and the tombs of numerous Vizers.

6. The Salâhatîye, whose commanding situation on one of the highest hills of the city and great size give it an imposing appearance, built for Süleimân by Sinân in the years 1550—1557 with four medreses, one *imaret* and other buildings, the four Medreses have to spiral stairways (*şifârlar*), presumably because the builder was the tenth Ottoman Sultan. The türbe of Süleimân I is in ~~the~~ court of the Mosque and Süleimân II, Ahmed II and various *Sahâbices* are also buried in it.

7. The Ahmedîye, on the Atmaidân, famous for the number of its minarets (six), completed

by Ahmed I in 1617; it encloses the turbe of its builder who died in the same year, in which his son Osman II, Murad IV and their mother the famous Kösem Walide (Mehpeker) as well as several other princes also lie. This Mosque was in days gone by "the State Mosque, the cathedral, the scene of the great festivals of the church and extraordinary processions of the court" (von Hammer, *Gesch. u. Hosp.* 1, 421).

8. The Yeni (New) Djami, on the shore of the Golden Horn at the 'Jew's Gate' (*Cifur Kapısı*) which has now disappeared, was begun by Kösem Walide and afterwards completed by Terkhan Khadija Sultan, the mother of Mehmed IV, in 1074 (1663-1664). Annagat other tombs in it are those of the sultans Mehmed IV, Mustafa II, Ahmed III and Osman III.

9. The Nispetiye Camii, on the second hill near the Great Palace, begun by Mahmut I in 1748 and finished by Osman III in 1755.

10. The Laleli Mosque, the smallest of the imperial Mosques, built in the interior of the city towards the Sea of Marmara near the Laleli Casmeh ("Lily Fountain") in the years 1761-1764, on the plan of the Selimiye, with minarets in which the builder, his children (including Selim III) and wives are buried.

The Mosques just enumerated are the "Great Imperial Mosques" within the walls of Istanbul; of the others — over 500 in all — the following are worthy of special mention:

1. Koca Aya Sofia ("the Holy Aya Sofia") on the Sea of Marmara, formerly the church of St. Sergius and Bacchus, but transformed into a Mosque in the reign of the Conqueror.

2. Zeyrek Djami on the Golden Horn, above Haskapan, formerly the famous monastery of Pantokrator, was used for a period after the conquest as a kennel, and was then made a Mosque by the Conqueror; it is called after the neighbouring wall (Zawlya) of Zeyrek Shihab Mahomed.

3. Mahmut Pasha Djami, near the Nispetiye Camii, occupying the site of a church which was taken down in 866 (1463-1464), and replaced by the famous Grand Viceroy whose name it bears and whose turbe it contains.

4. Murad Pasha Djami, in the Akseml quarter, built in 870 A.H. (1465-1466); the founder was one of the Conqueror's slaves.

5. Weli Djami, on the Golden Horn, built by Bayazid II in 881 A.H. (1476-1477) for the Zaimye Shihab Mustafa Weli.

6. Idris Pasha Djami, on the Sea of Marmara, finished in 890 (1485-1486).

7. Kocia Mahmut Pasha Djami, in the Pasmalia quarter, changed in 895 (1489-1490) from a Byzantine church into a Mosque; its founder, whose name it bears, originally a Christian, is said to have been the same man as poisoned Prince Djem. The Mosque is noted for the legends attached to the cypress with the tomb and to the wells on the outer court.

8. Eski (or 'Ahi) "Ali Pasha Djami", at the Cemetery Tugh, built in 902 (1496-1497), with the tombs of numerous Grand Viceroy.

9. The Mosque of Mihredin Sultan daughter of Selaiman I, who died in 965 (1557-1558) on the highest point in the city near the Adrianople Gate, whence it is also called Edirne Kapari Djami; it is one of Şahin's works.

10. The Mosque of Rustem Pasha in the

Takhtakal quarter on the Golden Horn is famous for its fine work; the founder, who was for long Grand Viceroy to Selaiman I and husband of Mihredin Sultan, is well known from Barick's account of him; he died in 1562; the Mosque was built by Şahin.

11. The Mosque of the Grand Viceroy Sakot Mehmed Pasha, southwest of the Hippodrome, formerly a Byzantine church, was finished in 970 (1571-1572).

12. The Feriye Djami, on the fifth hill, formerly a church of the *Pammakaristos* and, after the conquest, the residence of the Greek Patriarch, was transformed into a Mosque by Murad III in 1587, whence it bore the name Muradiye for a time.

13. The Mosque of Djerrah Mehmed Pasha, on the seventh hill near the 'Aurelian Gate', built in 1002 A.H. (1593-1594).

Of the Byzantine churches, about 400 in number, which are traditionally said to have existed, only about 50 can still be identified; of these only one (the so-called "Mekhitarist"), of the 11th century) has remained in the possession of the Greeks; one was occupied by the Armenians in the 17th century (*St. Nersis*), the others all became Mosques in the first two centuries after the conquest, while one — the church of Irene in the Serai — is now used for secular purposes.

Among the churches which are now Mosques the following may be mentioned here: the Kilia Djami, formerly St. Theodor which had been a Mosque since the end of the 10th century, the Kalye Djami, renowned for its minaret, formerly the monastery of St. Kater, at the Adrianople Gate, made a Mosque in the reign of Bayazid II, as was the Mitrakhor Djami, formerly the monastery of the Shanon near Veli-kale; lastly the Guldjami ("Mosque of Room") on the Golden Horn near the Aya Kapari, which became a Mosque in the 16th century in the reign of Selim II.

Before the Adrianople Gate, in the suburb of Ayyub on the Golden Horn, stands the particularly sacred Mosque of Ali Ayyub Agha with his turbe on the place where tradition says Shihab Ali Şahin al-Wal found his grave during the siege by Mehmed II in 863 (1458-1459) the Conqueror built a Mosque on the spot, which was replaced in 1213-1215 (1798-1800) by an entirely new building on the same plan as the original edifice; the turbe of the saint was last repaired by Mahmut II in 1235 (1819-1820). Among other relics preserved in the Mosque are an impression of the Prophet's foot (*basma-ı şerif*), and in the turbe, the flagstaff of the holy banner (*şamşat-ı şerif*) in preserved. In it the ceremony of branding on the sword (*şafat-ı şerif*) is celebrated at coronations.

The cemetery of Ayyub is famous, with its numerous tombs of Sultans, scholars, poets, viziers etc.

The turbes of most of the Sultans are in the Imperial Mosques; exceptions are the beautiful mausoleum of Sultan Abd al-Monid I (at Haghe Kapari) who died in 1789, in which Mustafa IV (died 1807) is also interred, and the splendid mausoleum of Mahmut II (1839) on the Haskapan; 'Abd al-Halim (died 1877) is also buried in the latter.

The Derwish monasteries, some large, some

small, are very numerous (*hâzîrâ, hâz, shâzîr*); in 1883 there were 166 such monasteries in Stambul and the suburbs, including the villages on the Bosphorus, which belong to the most different orders. The most important are the Mervanî monastery on the Yeniköy (built in 1006 = 1597-1598), the Sunâhî monastery of Merkez Efendi in the same place, founded by *Şeyhî Mehdi el-Ulu* Mevlânâ Mân who died in 959 (1552), and the Mevlâ-wîkhânâ of Perâ, which will be mentioned later.

Medreses (Collages). *von Hammer, Gesch. d. Osm. R.,* ix. 145 *et seq.*, gave the names of 275 Medreses; in 1883 there were 163 in Stambul and Aiyah, and such in Beğliklâh, Top-ikâne and Scutari, or only 172 in all with 1,148 occupants. The most largely attended were: Aya Sofia (148), S. Ahmedi (200), the Medrese of the Sultanahmet (644 in all), and those attached to the Mohammediye (912 in all).

The Hospitals and Asylums, (*hâzîrâ, hâz, shâzîr, Tâhîrân, Tâhîrânî*) which used to be attached to the Mosques, have now been replaced by modern institutions on the European model (the hospitals of Gulhânâ, Hâsârî Paşa etc., cf. *Krieger Paşa, Für die Türkei*, Jena 1904); the best known were the hospital of the Mohammediye and the Asylum of the Ahmedîye. — The *madrasas* (public schools) which used to be attached to the Mosques have also lost their importance: Parliament has just (1911) decided to reduce the number to three.

Libraries. In 1883 there were in Stambul, Aiyah and Top-ikâne, 45 public libraries, with 64,162 volumes in all — almost exclusively Islamic manuscripts —; most of these belonged to Mosques, or rather to the Medreses attached to them. The richest were: the Aya Sofia (4884), the Mohammediye (4885), Nûrî Osmâniye (4782), Eski Kfendi (3833), Kâpuk (2777), and Hâjîrî Paşa (1733) volumes; these figures do not include the collections in the old Topkapu Serai and "public" library (*umûmî*), containing many printed books; founded since that date, catalogues of these libraries (with the exception of the Serai libraries) have since been published in Stambul. The first fully accurate list was given by *von Hammer* in his *Gesch. d. Osm. Kaiser.* ix. 159 *et seq.*; the older catalogues, manuscript as well as printed, (cf. Flügel's edition of *Hâjîrî Khâfî*, vol. vi), have not lost their value as a guide of the modern catalogues. — The two most important collections of the Serai are in the Baghdad Khânâ (2,150 volumes) and in the library built by Ahmed III in 1714 (*hâzîrâ, hâz, shâzîr*, ca. 3000 volumes). The Serai library has been famous in Europe since the 17th century for its wealth in Greek and Latin MSS. (now 37), because it was hoped to discover among these the lost works of classical authors.

The central Bazaar with open shops (*Tarîkâ, Pazar*), as well as the *hâzîrâ* (like the Italian *fontanelle*, both stairways and shops) in Stambul all appear to date from the Turkish period. The Great Bazaar, laid out by Mohammed II, was in earlier times repeatedly ravaged by fire; great damage was also done by the earthquake of the 10th July 1894. A similar Oriental character to that of the Great Bazaar is borne by the Egyptian Bazaar laid out by Sulaimân I in 1560 and rebuilt in 1609 in stone by Ahmed I after a fire (*hâzîrâ, hâz, shâzîr*, bazaar for drugs and spices) near the Yeniköy on the harbour side.

The older and larger Khânâs lie on the streets leading from the harbour to the Great Bazaar, for example the famous Wallîdâ-Khânâ (built in 1646 by Kâim Wallîdâ-Sulân as a work for the Yeniköy), the great seat of Persian merchants with about 400 rooms, the Bayrak Yenî Khânâ, built by Murâd III with 320-350 rooms, the Sunâhî-Khânâ, the Mahmûd-Pâshâ-Khânâ etc. of the others we may mention the Westî Khânâ (as the Taahhûdî quarter) built by Kâpuk Ahmed Paşa and that of Pestew Paşa to the Bahâdîrî quarter. The number of these buildings dating from the older period and still in use may be estimated at 200.

The Caravanserais (likewise called Khânâs) have almost entirely disappeared from Stambul, or have lost their importance as meeting-places for travellers; the largest used to be in Scutari. Among them was the Eski Khânâ ("Khânâ of the Ambassador"), taken down in 1883, which was on the Divanîkhân opposite the so-called "Horn Pillar" (*Çemberli Tahta*), done to the second half of the 17th century (according to *von Hammer, Gesch. d. Osm. Kaiser.* x. 191, ill. 1894) the Emperor's eunuchs were quartered or rather interned there.

Water Supply. The oldest aqueducts were laid down by the Emperor Hadrian and Valens; the picturesque remains of the Aqueduct of Valens, *İzâdîrân Kemer*, are preserved between the third and fourth hills. The Byzantine Emperor arranged for a perfect supply by bringing water through new aqueducts and pipes from the distant springs on the European shore of the Bosphorus to the town. The sultans, who succeeded them, still further extended these waterworks, which were particularly important on account of the danger of the Muslims, then had to do so was the Emperor himself (Keremîz, ix. 10 & 21). Sulaimân I. described the building of waterworks as one of the three great tasks of his life (the two others were the building of his great Mosque and the conquest of Vienna). He ordered his architect Sinân to lay down five aqueducts (*hâzîrâ, hâz, shâzîr*, *Çemberli Kemer*, *İzâdîrân Kemer*, *hâzîrâ, hâz, shâzîr*, and the *hâzîrâ, hâz, shâzîr* with the pipes connected with them and a great reservoir — *hâzîrâ, hâz, shâzîr*).

Çemberli II built the Pyrgos reservoir in 1620; in Ahmed III is attributed the building of the great *hâzîrâ, hâz, shâzîr* in the source area of the Belgrade forest; Mahmûd I built the dam of Baghîc-Kol in 1732 and the aqueduct which supplies Pera, Galata and Top-ikâne. In addition to these works, water has been brought for the last thirty years from the lake of Izerkoy by private enterprise. The classical style of architecture of the older works appears in the *Tarîkâ* (water-distributors) buildings and in the *Sarîrâ* (water-balances) pillars. The best known are the Takîm of Perâ (Mahmûd I) and the two outside the Eski Sâpâ gate on the harbour of Stambul.

Of all the Byzantine cisterns (over a dozen have now been discovered), which were used to collect water for periods of scarcity — droughts, sieges, etc. — and were fed from the great aqueducts only one, that of Yerebatan-Serai ("the under Serai"), has remained in use; the others, at least those that are useless, have been turned into vegetable gardens (*hâzîrâ, hâz, shâzîr*); the others are used, for example the largest of them,

formerly the eastern of *Palladion*, now called *Sin the Street* ("1000 pillars"), as workshops for silk spinners on account of their moist atmosphere. In the Turkish period, thousands of *tsoukaina* (*tsouk*, *tsoukaina*, have arisen, some of them being real works of art, both as regards their architecture and decoration, particularly worthy mention is the fountain of Ahmed III before the main entrance to the Serai (Harem) (Harem) with an inscription composed by the builder himself in 1142 (1728-1729).

None of the Byzantine Baths have survived; their place has been taken by the well known hot baths of *Orientalis* (*Hamam*), at the end of the 19th century, the number of such institutions in Istanbul was estimated at 130 — there are probably about the same number to-day.

The old Byzantine city walls, although they have long been worthless for the defence of the city, have survived practically unaltered on the west side. Mohammed II had them repaired a few years after the conquest and built the fortress of the seven towers (*Yedikule*). The castle of *Yedikule* (*Castle* aptly calls it the *Fortress of Constantinople*) had a garrison under a *Blaster* and was used down to the 17th century as a treasury and to the 18th as a prison for high officers of state, foreign envoys and prisoners of war. In 11 Mahmut Paşa, Mohammed's 11 famous Grand Vizier, was tortured and put to death and *Yedikule* was razed to the ground, in 1247 (1831-1832) the ruins from the *monastery* (*Armenian*) on the *Armenian* were transferred here, it is now left to fall to pieces.

The great earthquake of 14th September 1509 did great damage to the walls, and forced *Bayezid II* to repair them (*see* *Monuments*, *Genl.* 4. *Genl.* *Genl.*, 11, 350). In the reign of *Murad IV* (in 1635) the walls, which had been repeatedly damaged, were rebuilt by *Barbaros Paşa* and white-washed (cf. *Kelly*, *Turkey* etc. I, 1, 12 et seq.). A thorough renovation of the sea walls and the harbour walls as far as *Egri Kapu* took place in the reign of *Ahmed III* in 1722-1723 (*Celebi*, *Genl.* 11, 47 h. et seq.).

Since that date nothing has been done for their preservation; a great part of the sea walls was removed when the Eastern railway was laid, the walls on the Golden Horn have almost entirely covered by the houses that have been built over them, or destroyed by fire and only in a few places have portions of the old city survived.

The Gates of the City-Walls.

a. on the Golden Horn from East to West:

1. *Egri Kapu* (Golden Gate); 2. *Efendi K.* (*Jew's Gate*) before the *Yeni Ulu*; 3. *Halkapasa K.* (*Vishnuker Gate*); these three are destroyed; 4. *Yeni Ulu* (*Gate*) K. (*the Gate of the pier for ships*) usually called *Yeni Ulu K.* (*Prison Gate*) on account of the adjoining *dehşet* prison, which was also used as a female prison (changed in 1247-1831-1832 into a *Karahol* warehouse); now it is the tomb of *Baba İsmail*, the patron saint of the prisoners; 5. *Odun K.* (*Wooden Gate*); 6. *Voni* or *Ayazova K.*, built in the 18th century; 7. *Yüküphan K.* (*Gate of the Rose Warehouse*); 8. *Çiğdemli K.*, so-called after *Çiğdem* who took part in the siege under the *Conqueror*; 9. *Aya*

K. (*Salut Gate*, from the neighbouring church of *Saint Theodosia*, now the *Gökmen*); 10. *Fener K.* (at the entrance to the *Fener* quarter); 11. *Petri K.*, which in the Byzantine period led into the fortified *Petion*; 12. *Yeni Ulu Kapu* (*the new gate leading into the interior of the Golden Horn*); 13. *Saltık K.*, so called after the palace of the *Blachernae*, which was situated there, in the 17th century it still bore its Byzantine name *rod Konyas* (*Blaster's Gate*); 14. *Yeni Ulu K.* (restored from *Ayaz* *Aspet*, as it leads to the suburb of *Ayaz*), in the 18th century also called *Kylopora* by the Greeks.

A. The Gates of the land walls, from north to south:

1. *Egri Kapu* (*Unique Gate*) At *Egri Kapu*, adjoining the city walls are the ruins of the *Toklar Serai*, the palace built by *Constantine Porphyrogenetos* (10th century). After the conquest it was used in turn as a stable for elephants, a workshop for the manufacture of *Nicean* fancies and glass, and has become famous by the finding of the *Coban* ring, the most valuable diamond among the Ottoman crown jewels. 2. *Edirne K.* (*Adrianople Gate*); 3. *Yüküphan K.* (*Camion Gate*); 4. *Mevlâlikhan* *Yeni K.* (*New Gate of the Seraglio-monastery*); 5. *Silivri K.* (*Silivri Gate*); 6. *Kapalı K.* (*the "Walled-up" Gate*, now reopened); 7. *Saltık K.* (*Blachernae Gate*) usually called *Yedikule K.*

The *Golden (Triumphal) Gate of Theodosius II*, has been walled up since the Turkish conquest; the *basileus*, which adorned it as late as the beginning of the 15th century, have now entirely disappeared.

c. Gates on the sea walls, from west to east:

1. *Nisli K.*; 2. *Somrta* (*Primate's*) *K.*; 3. *Yeni Ulu K.*; 4. *Yeni Ulu K.* (now destroyed); 5. *Yeni Ulu K.*; 6. *Kum K.*; 7. *Çiğdemli K.*, called the gate "with the tower" by the Greeks in the 17th century after the stone tower placed above it; 8. *Akhir K.*

d. Gates of the Serai walls along the Sea of Marmora and the Golden Horn:

1. *Saltık K.*; 2. *Yeni Ulu K.*; 3. *Yeni Ulu K.*; 4. *Yeni Ulu K.*; 5. *Yeni Ulu K.* (on the highest point of the Serai, now destroyed); 6. *Yeni Ulu K.*, now destroyed.

These gates were only used for communication with the Serai.

The sacred and profane buildings which have been enumerated, give a clear idea of the changes which have been brought about in Constantinople through its occupation by a people of different race, religion and culture with totally different requirements of everyday life. This revolution which spared nothing, has also affected the numerous monuments and works of art which adorned the streets and public places of *Byzantium*. The *Conqueror* ordered the great equestrian statue of *Justinian* (*see* *the "Horse of Justinian"*) to be taken down from its pedestal and the metal melted down to make cannons; the other monuments met the same fate.

Of the other pillars etc. the following have survived — almost by a miracle, probably because they were regarded as talismans. On the *Armenian* there still stand the Egyptian obelisk, the *Snake Column* (the core of the obelisk of *Constantine Porphyrogenetos*; the latter has however lost its coating of bronze. The *Snake Column* survived in

the khans of the Genoese period that have survived in the Pera-Medinet. The originally Frankish (Italian) population formed the nucleus of the later so-called Latin community of Pera; Greeks (particularly from Chios), Jews and Armenians afterwards settled here; after the foundation of the Arsenal and the gun-foundry of Top-Khâne, Muhammadans from the east and west also forced their way in and took possession of the larger Catholic and Greek churches which they found there. Only St. Pierre, St. George and St. Basil have remained to the Catholics; the others, viz: St. Paul, now the *Arak Dîvân* (a Mosque since 1523 or 1535), St. Maria *de Drapers* (consecrated in 1603), St. Francis (since 1607 the Mosque of Wâhîd), St. Anna (consecrated in 1693), St. Sebastian, St. Clara, disappeared in the course of the xvth and xvith century. Of the Greek churches the best known was the *Kieretzeri*; it disappeared in the xvith century. The Turks have 14 Mosques in Galata of which 4 were originally churches.

Galata with its taverns and other places of amusement was, as Pera now is, much visited by Turks who wished to enjoy themselves there as in France. Mehmed III used occasionally to visit the Catholic churches to see the services.

As early as the beginning of the xvth century, the ambassadors of Venice and France as well as other foreigners also settled on the heights north of Galata in the "*villages de Pera*". Pera, abbreviated from this phrase, became the name of the new settlement and then fell into disuse as the name of Galata, to which it was originally applied. Luigi Goliti, the adviser and agent of Sultan Izzet, Grand Vizier to Sultan III, had his residence there equipt in splendour; the name by which he was known to the Turks, *Agâgân* ("Son of a prince" as he was son of a King) is the Turkish name for Pera. The Greek name is *Stavrodéfi*, "the crossroads", because at the entrance to Pera, the main road from Pera la crossed by the coast from Top-Khâne to the Arsenal.

Pera has since been constantly expanding and with its 100,000 inhabitants forms the real European quarter; Galata remained the commercial quarter and seaport. The Turkish population which at an earlier period had settled on the western and eastern slopes of the high ridge of Pera, is gradually disappearing and only a few small Mosques in the centre of the Christian quarter remind one that Muhammadans also were once settled here.

Two other foundations of the earlier period have survived: the *fiakars* Serai and the Mewlewî monastery on the road between Galata and Pera. The former, built by Bayezid II, was used as a training school for the Imperial pages; in the reign of Selim II and again in that of Mehmed IV (in 1076 A. H. = 1665-1666) it was closed; III Ahmad III revived it in 1724; the old building taken down in 1820, the new one built in 1827 as a medical school with polytechnic since 1867 it has been the Lycée Impérial, imitated on the French model.

The Mewlewî monastery, the oldest settlement of this order in the capital, called "*Galata Mewlewîkhâné*" as the district of Galata included Pera also, was built in 497 (1097-1098), burned down in January 1763 and finally rebuilt by Se-

lim III in its present form in 1210 (1795-1796). It is best known to Europeans as containing the tomb of the renegade Ahmad Pasha (Bosporus, q. v. p. 144) and to Muhammadans by the tomb of Ismail Ankarawi, the commander on the *Maghrib*.

Close to Galata, to the east on the seashore, is the suburb of Top-Khâne so-called after the gun-foundry erected there by the Conqueror himself and much extended by Sultan I. The present building, which is only used at the present day for government offices, as artillery are now procured from foreign countries, dates from 1745, just opposite it, Kapudan Pasha Kiliti 'Abî built his great Mosque in 1580 with a ribbe, both the work of Sinan; the tomb, which is built in the Turkish fashion in bad taste, probably dates from a later period. In 1732 Mahmud I built opposite the Mosque a handsomely decorated fountain; and at some distance, on the open space, is the Nurgatye Mosque built by Mahmud II in 1823-1826 in memory of the massacre of the Janissaries.

The site of the aforementioned observatory, which the astronomer Wâhî al-Dîn built after Top-Khâne by command of Murad III and which was destroyed in February 1850 on the representations of the historiographer Sa'd al-Dîn, cannot be more definitely located.

In the neighbourhood to the Fındıklî quarter is the Mosque built by Sultan I in 967 (1559-1560) in memory of Prince Nishangî who perished in 1553 on the Persian campaign and called after him; it is a well known landmark and has been several times destroyed by fire; it was last rebuilt in 1823.

"Kaba-taşı" "the Rough Rock", was the name of a dangerous cliff near the shore at Dolmahaghe, the *Petra Thermas* of the ancients (see Hammer, *Compt. u. Berp.* i. 191); a certain Mustafa Nedîth, who had a villa there on the shore, built a pier to it early in the xixth century. It was finally rendered safe by the building of a small haven in 1267 (1851) but the name has remained.

Dolma-Baghçe ("the well-filled garden", the translation "Gould-garden" — which first appears in von Hammer, *Compt. u. Berp.* ii. 190 — is based on an amusing misunderstanding). The area which is now occupied by the palace built in 1853 by 'Abd al-Majid and the open space in front of it, was originally a deep gulf between the gardens of Kara Hall and Nezhiktepe, often mentioned in the xvth century. It was regained from the sea in 1614 within three months by Kapudan Pasha Khailî. It was from this bay that the conqueror's ships were dragged into the Golden Horn in 1453 (see above p. 867). At a later period the admirals used to anchor here for several days when the fleet was about to sail and give farewell festivals. — The above-mentioned palace was used as the Imperial residence by Sultan 'Abd al-Majid and his successor 'Abd al-'Azîz till the latter built the palace of Çerâghân; the reigning Sultan Mehmed V has again returned to Dolma-Baghçe.

Bibliography on the Conquest, see Lucas, *Chroniques* and *Chalcocondyles* in the *Corpus*, also *Monumenta Hung. Hist.*, xxi. et seq. (ed. Dethier); A. D. Montmann, *Belagerung und Besetzung Constantinopel*... 1455 (Stuttgart 1858).

The main source for the history of the Mos-

ques of Stamboul and its suburbs is the *Hedder el-Gardahi* the "Garden of Mosques" by Hâfîz Jusufi Efendi of Arwanak (described in the second half of the eighteenth century), which was first made known in Europe by von Hammer (cf. *Gesch. der Osman. Reichs*, ix 46—144); it was printed in Stamboul in 1281 (1862-1865) with the additions made by 'Abd Sami' which come down to the reign of 'Abd al-Majid. The earliest descriptions of any value with pictures were given by Grotot in his *Relation nouvelle d'un Voyage à Constantinople* (Paris 1672); there are fine engravings in d'Ossun, *Traité de l'Empire Ottoman*, Vol. vii. of the folio edition. The section in von Hammer's *Constantinople u. der Bosporus*, i 335—446, although in many places out of date, still deserves to be consulted; see also *L'Architecture Ottomane*, Ouvrage publié sous le patronage de S. E. Edhem Pacha (Constantinople 1871); Corbachy-Garlin, *Die Baukunst Constantinopels* (about to be published); Paspati has discussed the Byzantine churches which are now Mosques in his *Byzantine Mosaics* (Cp. 1877); Lady J. Ebermont, *Étude sur la Topographie et les Monuments de Constantinople* (Paris 1909).

On the aqueducts the authoritative work is still Andréossy, *Voy. v. l'Émirat de la Mer Noire* (Paris 1818; second edition entitled *Constantinople et le Bosphore de l'Asie*, ibid. 1828); cf. thereon von der Goltz's map of the environs of Constantinople (Berlin 1897); cf. also v. Hammer, *Const. u. Bospor.*, i 350—352, the baths are specially dealt with on p. 530 et seq. and by White (see below), II. 296—312.

On the city-walls: A. von Mühlhagen, *Byzantine Constantinople* (Leipzig 1899); A. Sanviti, *Autour des murs de Constantinople* (Paris 1912).

On Galata: A. Balin, *Histoire de la Fondation de Constantinople* (Paris 1804); L. P. Belgrand, *Document relatif à la colonie Génoise de Pera* (Genova 1883); Corbelli, *Notiz su Galata* (*Ann. Brit. Sch. at Athens*, No. xi. 1904-1905); Savill, *Stille Colonia dei Genovesi in Galata* (Turin 1831).

General works: Codomo Comilas de Carbo-nario, *Istruzione topographica di Constantinopoli* (Bassano 1794); v. Hammer, *Constantinopoli und der Bosporus* (2 Vols., Pest 1822; not yet obsolete); von *Geschichte der europäischen Reiche* (10 Vols., Pest 1827—1835); Charles White, *Three Years in Constantinople* (3 vols., London 1845); Skantzios Byzantios, *Konstantinoupolis* (Athens 1851—1859; in Modern Greek; an imitations but excellent compilation); E. A. Grosvenor, *Constantinople* 2 Vols., London 1895); Eugen Oberhammer, *Constantinopoli*, Stuttgart 1899 (reprint from *Paul-Wlasows Russisch-Byzantinische*, Vol. (c.); Special Essay, *Constantinople, De Byzance à Stamboul* (Paris 1909).

Among Oriental authorities Ewliya Çelebi (seventeenth century) may be mentioned; there are three recensions: 1. *سفرنامه* (Stamboul 1839

ff.; contains only the first sections); 2. Ewliya Efendi, *Narrative of Travels in Europe, Asia and Africa*, transl. by von Hammer, London 1850 (incomplete); 3rd edition in 6 vols.; Stamboul 1814—1817 A.D.

An almost complete survey of the older travel

literature is given by Ladoke, *Beschreibung der türk. Reiche* (Leipzig 1780), i 399 et seq., II. 93 et seq.; cf. v. Hammer, *Const. u. Bospor.*, vol. i preface.

Plans of the City. On the older plans see Oberhammer, *op. cit.*, p. 25; the first real plan is that completed by F. Knauff in the year 1776 and revised in 1786, which appears in its original form in Choiseul-Gouffier, *Voy. Pittoresque de la Grèce*, Vol. II, 208 J. B. Lechevalier, *Voy. de la Propagande* (Paris 1800). H. Klepper's map, *Constantinople u. der Bosporus* (Berlin 1853) attests Molke's surveys of the years 1836-1837. The latest plan by C. F. Swolpe is practically based in its details on that of Knauff.

View of Eugen Oberhammer, *Constantinopel unter Sulaiman dem Grossen* (München 1902; contains the drawing by Melchior Lotichs of the year 1559); Choiseul-Gouffier, *Voy. Pittoresque de la Grèce*; Perizonius, *Peregrinatio Pittoresca in Constantinopoli et in his Partibus* (Paris 1813); Mölling, *Voyage Pittoresque de Constantinople* (Bern 1819).

(J. H. MÜLLERMAN.)

CONSUL (Arabic *hankar*, Persian *hankar*, Turkish *konsul*), the accredited administrative and commercial agent to the local authority in a commercial town. Turkey gives its consuls the title of *ghasb-könder* and Persian that of *kâr-kardâr*. In Muhammadan countries, the consul as well as those, who claim his jurisdiction, have the right of extra-territoriality; he is the judge of the latter, who are exempt from the jurisdiction of the local courts, except in mixed zones. The old Venetian capitulations granted the republic the right of maintaining at the Porte a consul called the *baile* (cf. the article *ambasador*, p. 640), an official who had previously existed at the Byzantine court; in 1304, the Genoese Podesta had the title "*gouverneur des consuls*" (Santi, II. 212). There was a Venetian consul in Egypt as early as 636 (1238); his right of jurisdiction was confirmed by the treaty concluded with the Sultan al-Malik al-Adil II. (1238—1240 A.D.). The French capitulation, which reserved for French citizens the privilege formerly granted to Venetians (last renewed in 1740), have used the position of consuls in the Ottoman empire: the right of deciding lawsuits between their own citizens, without the intervention of the local authority (Art. 15 and 20); the *hankar* Porte reserves the right of judging cases in which the consul is a party, but he cannot be imprisoned nor the seals placed upon his dwelling (Art. 16); they may make wine in their homes or import it from abroad without anyone interfering (Art. 40) or levying duties upon it (Art. 31). They shall employ such native dragomans and such janissaries (*yandji*) as they please (Art. 43 and 50). They are to be allowed to hold their flag on residences which they have had to for some time [except in certain towns such as *Dimas*] (Art. 49). They are to examine the papers of vessels of their nationality (Art. 54), issue the consular dues (Art. 64), deliver and examine passports (Art. 61); they shall be present at the searching of the *hankars* in connection with any crime committed by one of their countrymen (Art. 65 and 70).

1876), p. 386 et seq.; *Capitulations de*
Traité de la France, p. 37, 55 et seq.
(CL. HIST.)

CORAN [See CORAN.]

CORBAÏL, a title applied to colonels of the regiments of Janissaries (*seks*) [see the article JANISSARIES] and to prominent individuals in the smaller townships of Turkey on whom it devolved to entertain passing strangers. At the present day it is used only as a title of Christian country gentlemen.

Bibliography: Muradges d'Ottoman, *Tal-chen Général de l'Empire Ottoman*, (Paris 1788—1844); von Hammer, *Die Osmanischen Kaiser Sultane* (Vienna 1845); de, *Geschichte des Osman Reichs* (Pest 1836).

(F. GIBBS.)

CÓRDOBA, French *Cordoue*, English, Italian and German *Cordoba* (KORDOVA), Arabic *Kur-tuna*, Latin *Corduba* (370 feet above sea-level) on the right (north) bank of the central course of the Guadalquivir (from the Arabic *Wād al-Kabir* "the great river"), the ancient *Urtuba*, with 60,000 inhabitants, is at the present day the capital of the province of the same name which lies on both sides of the river in the heart of Andalusia. The southern and smaller half of the province, practically the famous *La Campiña* (*ḥimā al-Kampiña*, Latin, Arabic text, p. 174), rising in the south east to a height of over 1200 feet, is more level, hot and fertile, being especially devoted to viticulture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights over 2000 feet high in the central Sierra Morena (Marion's Mount) with the plateau of los Pedroches which declines to a northerly direction to the Záfor valley in the west and the Guadalquivir valley in the east; this plateau is called *ḥimā al-faḥḥā* by Idri' and by others *ḥimā al-Kaḥḥā* "sunfield" and in it lies the little town of Pedroche known to the Arabs as *Bayrawd* or *Bayrak* (whence *al-Bayrak*, q. v. above p. 735). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (*caballos cordobeses*) and rich deposits of coal and minerals. The name Córdoba has frequently been explained as from the Pœnician-Punic: *קורבא*, "good town" since Camille Rist suggested this etymology in his *Description de l'Espagne de l'Épique d'Al-Andalus*, Madrid, p. 161 (for even earlier etymologies see *Madrid*, vi. 646 and *Malaga*, i. 335). The name is certainly not Semitic (not Old-Iberian (cf. *Balduba* the Old-Iberian name for Caesar-Augusta, whence *Saragossa*, *Zaragoza*: there is a *Balduba* = *Medinilla* in the south between Málaga and Gibraltar). After the second Punic war it became known as an important and wealthy commercial city (*in Córdubensi*) under the name *Κορδοβα* or *Κορδοβα* or *Κορδοβα*. It was finally taken for Rome by St. Marcellus in 152 B. C., colonized with Roman citizens and as *Colonia Patricia* raised to be the capital of the Provincia of Hispania Ulterior. As Córdoba had taken the side of Pompey, it was severely punished by Cæsar after the battle of Munda in 49 B. C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lucan) alternately with Ilipolis (Seville) and Tarraco (later the Arabic *Tālijay*, Lewigih king of the Visigoths took it in 571 from the Byzantines

It had been settling in Southern Spain since the time of Justinian, but although it was a see of a Bishop it remained unimportant under the Goths.

In 711 Córdoba was captured by Muḥammad al-Rumī, a Mohammedan slave — it was betrayed by the Jews — but 400 Goths held out for three months longer northwest of Córdoba in the fortified church of San Acisclo. The town was treated very leniently by the Arabs (*Sinemat*, *Historia de los Morábetes*, p. 49).

As early as the year 100 (719), al-Samī b. Malik al-Khawāsim, the sixth of the 23, mostly ephemeral, Umayyad governors, transferred the seat of government definitely from Seville to Córdoba and repaired the ancient Roman bridge. When the last governor Ḥusayn b. 'Abd al-Rahmān al-Fihri (126—138 = 747—756) was overthrown by the Umayyad prince 'Abd al-Rahmān I b. Muḥ. al-Dakḥil (q. v., p. 53), who had escaped the massacre of his house in Syria, the great period of prosperity of the city began, and lasted throughout the Umayyad dynasty (q. v.) of Córdoba, which was independent of the 'Abbasids in Baghdad (138—403 or 421 = 756—1031 or 1031). This incomparable period of splendour of the western rival of Baghdad, the city of the Caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridge-head, the fortress-tower of Calahorra (Arabized from the Iberian *Calagurris*), the Ka'ba of the west; although, at the re-conquest in 1236, it became a Christian cathedral and was disfigured by alterations, it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (*Patio de las Naranjas*), the wall which encircles it as if it were a fortress or monastery, the bell-tower, which was however renewed in 1593 and 1763, along with its popular name of *la Mezquita* "the Mosque" while all the other splendid buildings and monuments of this world-famed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd 'Abd al-Rahmān I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Arabs of North and South but also between them and the Berbers of North Africa, the Spanish renegades and the Moors who remained a constant menace to Arab rule in Spain and brought the ultimate fall, he began the building of the great mosque in the last two years of his life 785—786. His son and successor Ḥishām I 173—178 = 788—796 completed it, and built the minaret (often called in Spain *torre de* and now *torre de muelle*), but 'Abd al-Rahmān II. (206—238 = 822—852), son and successor of the Amir al-Hakim I. (180—206 = 796—822), found himself forced to enlarge the building; by extending it 11 avars northwards he added 7 transepts with 20 rows of pillars and built the second *mihrāb* into the south wall, west of the present *Capilla de Nuestra Señora de Villaviciosa* (833—848), while his son and successor Muhammad I. (238—273 = 852—886) had in 852—856 thoroughly overhauled the older building, which had been too hurriedly put up; he devoted particular attention to the decoration of the doors and walls, raised off the *mihrāb* reserved for the Amir and the court in front of the *mihrāb* by a wooden screen

built a covered passage (*zafra*) from Alcazar, the palace to the west of the mosque, to provide a direct and private entrance to the mihrāb for the daily prayers. 'Abd al-Rahmān III. al-Nāṣir (300—350 = 912—961), the "Ḥafṣid" (q. v. p. 53), who marks the zenith of the Arab epoch in Spain, rebuilt the minaret, which had been severely damaged by the earthquake of 830, in splendid fashion; he was also the builder of the celebrated country house Madīnat al-Zahrā (now called Córdoba la Vieja) for his beloved al-Zahrā, 1½ hours' journey northwest of Córdoba at the foot of the Sierra (near the convent de San Gerónimo which has been built out of the ruins of the palace), but practically nothing is now left of it (cf. Maqāṣat, i. 344 ff. seq.). The most beautiful extension of the mosque proper (almost doubling it) was carried out by the learned and scholarly Caliph al-Hakam al-Mustansir bil-lah (350—366 = 961—976), son and successor of the great 'Abd al-Rahmān III, who ordered his Prime Minister or Grand Vizier (called *ḥakīm* in Spain) Ḥisām al-Hakīm (the Slave) to extend the colonnades to the mosque to the south by the addition of 14 transverse, and to add a splendid new mihrāb, a new *zafra* and the third noble mihrāb, which alone has survived in its entirety. The last great extension was made by Ḥishām II al-Mu'ayyad (366—399 = 976—1009) powerful vizier, 2nd regent al-Manṣūr (Almanzor, died 1002), who added seven colonnades to the whole length of the building in the east and thereby raised the total number of *ḥall* (previously 12) to 19, but threw the mihrāb out of its proper place at the end of the central axis of the sanctuary (on account of the proclivities slope down to the Grand Mosque) and was found impossible to extend the building further to the south). Like al-Zahrā in the N.W. al-Madīnat al-Zahrā ("the Hourisburg city"), founded to the east of Córdoba by al-Manṣūr to be the seat of the government and his officers, was destroyed in the period of revolution in the beginning of the 11th century and has now quite disappeared.

After the complete extinction of the Umayyads with Ḥishām III al-Mu'ayyad (418—423 = 1027—1031), Córdoba became a republic under the presidency of these *Ushwārī* Abū 'Al-Ḥasan Ushwārī b. Muḥammad b. Ushwārī, 1032—1043, Abū 'Al-Walīd Muḥammad, 1043—1064, and 'Abd al-Malik, 1064—1070. In the latter year it passed to the 'Abbāsids of Seville; in 1091 the Almoravids and in 1148 to the Almohads. With its conquest by Ferdinand III of Castile in 1236 it began to decline.

Of the countless Arab scholars who belonged to Córdoba, we will only mention here Ibn Hazm, died 1044, Averroës (Ibn Rushd), died 1126, and Maimonides, died 1204.

Bibliography: Maḥbūṭ devotes a whole book to Córdoba, i. 297—462 (epitomised in *Geography, History of the Mohammedan Dynasties in Spain*, L. 200—249), though it contains many literary and historical notes referring to other places; Idriṣi, *L'Afrique et l'Espagne* (1866), p. 208—214 (Arab.); — (translation 246—266; Yüfesi, *Muḥammad al-Buhārī*, iv. 38—61; al-Kawmī, *Asḥar al-Buhārī*, p. 370; Mador, *Ensayo de geografía árabe*, i. 646—660; Schack, *Reise und Kunst der Araber in Spanien und Sicilien*, ii. 182—224; Contreras, *Estudio*

descriptivo de los monumentos árabes de Granada, Sevilla y Córdoba, i. *En Alhambra, El Alcazar y la gran Mezquita de Córdoba*, 3. ed., Madrid 1883 (2. ed. 1878) (con grabados y planos), p. 40—108; Rodrigo Amador de los Rios, *Inscripciones árabes de Córdoba*, 1. ed., Madrid 1879, 3. ed. 1892, iv., *Cine excavación de las ruinas de Madinat al-Zahrā en La Hípota Madinat*, 1. juil. 1906, p. 19—48; K. E. Schmidt, *Córdoba and Granada, Talpaig—Berlin* 1902 (Seemann's *Bruckmann's Konversationslexikon*, 29. 13); Budeker's *Spain and Portugal*, 1906, p. 345—353 (with an excellent plan of the city and of the mosque); A. F. Calvert, *Moorish Remains in Spain*, London 1906, p. 1—253 (text inaccurate; the numerous illustrations, some coloured, are very successful, most of them excellent); A. F. Calvert and Walter M. Dillman, *Córdoba, a City of the Moor*, with 160 illustrations, London 1907. On older, rarer descriptions of the city see E. Kadel, *Abrégé de l'histoire, études historiques*, Córdoba 1908, p. 427. (C. F. Sauerwald.)

COROMANDEL, the name adopted by European geographers for the eastern coast of India. It is a corruption of *Choramanjale*, "the kingdom of Chora or Chola", which is found in Tamil inscriptions of the 11th cent. at Tanjore. The early Mohammedan name for the same coast is Maḥar (q. v.). (J. S. Cotton.)

CRAC, CRATH, a medieval Frankish corruption of the place-name KARAK (q. v.); CRAC DES CHATELAINES see *AL-AKALD*.

CRETE

1. Present Conditions and Constitution.

Crete, the geography and pre-Muhammadan history of which will not deal with here, was called *كريتش* by the Arabs and *Kleid* by the Turks. At the present day it is an autonomous state, owing the sovereignty of the Porte but paying an tribute and governed on behalf of the four protecting Powers, Britain, France, Italy and Russia, by a High Commissioner (ill 1906 Prince George of Greece, who was followed by Zaimis; the post is at present unoccupied). The High Commissioner is assisted by an Administrative Council of three members (*syndikoi*), who control the departments of Justice, Finance, Education and Home Affairs. They are appointed and dismissed by the High Commissioner, are responsible to the Chamber and may be impeached before a special tribunal. According to the constitution which was granted on the 26th—28th April 1899 and modified on the 21—22nd February 1907, the Chamber of Deputies (*syndes*) was elected to represent the people. One deputy is elected by each 5000 inhabitants. The Chamber meets annually on the 1st May for 2—3 months. There are elections every two years. Parliament has control of finance and appoints taxes.

The four protecting Powers control the foreign affairs of the island.

Crete is divided into 5 *eparchies*, formerly called *nomoi*: Canea, Candia, Rethymnos (York Remos) Sphakia and Lassithi (Turk. *Lashid*) each of which is under a Nomarch. Canea is the capital.

Ecclesiastical affairs are controlled by the Synod, which consists of the Metropolitan and seven bishops of the island. They meet in Candia (Heraklion).

Justice is administered on the French model. Muhammadan judges retain their jurisdiction in matters of religion, marriage and inheritance as well as in all the wardship of minors. The police and militia are commanded by Greek officers.

According to the last census, that of the 31st Dec. 1911 the population is as follows: 307,812 Christians, 27,552 Muhammadans, 487 Jews, in all 335,851.

2. 1714-1879.

The Muhammadans first came in contact with the island on their earliest campaigns against the Byzantines and occupied it temporarily in 873. We know very little of the history of this early period. It was not till 823, that Abū Hāshim 'Omār b. 'Alī b. Shu'ayb al-Hafsi (q. v. p. 87) permanently won Crete for Islam. Abū Hāshim 'Omār was the leader of the mercenaries, who had to flee after an unsuccessful rising against Hakkis in Cordoba. On his raids on the Mediterranean coast, he landed at Crete which he gradually subjected with the exception of the territory held by the Syriakoi. In spite of repeated attempts by the Byzantine Emperors to drive them out, the Muslims retained their newly won possession for 133 years. To render their footing on the island more secure, they built the new capital of Khandaq, which later became Candia, near the promontory of Cherson. This name was continuously applied to the whole island down to the most recent times.

In 961 the Byzantine general Nikephoros Phokas succeeded in taking Candia after besieging it for several months and soon after subjecting the rest of the island. The last Amir 'Abū al-'Asrā died in Constantinople and his son Aqunnes entered the service of the Emperor. The Muhammadan population left the island or in a short time adopted Christianity.

After the conquest of Constantinople by the Latins, Crete fell to Count Boniface of Montferrat who sold it to the Venetians in 1204. Down to the Turkish conquest in 1669 it remained under Venetian rule, which, although very unpopular with the inhabitants and on several occasions guilty of acts of great cruelty, nevertheless produced a period of prosperity ~~which~~ as it has never again reached.

In 1645 began the Ottoman conquest. The pretext given was an attack which the Venetians and Maltese had made on the Khaila Agha of Tripoli when he was on the way to Egypt with a slave and her child, whose father was said to be Sultan Ibrahim. Their intention to occupy the island ~~was~~ however of much longer standing. After a siege of 57 days the Turks took Candia, then Rethymno and after long and weary fighting and a desperate resistance on the part of the Christians they finally occupied Candia (1645-1669). The whole western world sent embassies to the Venetians under Morosini. Nevertheless the town had to surrender on ~~the~~ 27th Sept. 1669 to the Grand Vicer Ahmad Köprülü. By the terms of the treaty of peace the Venetians only retained Gherusa, Suda, and Spinalonga. It was not till 1713 that the latter finally passed to the Turks.

At first the ~~Muslims~~ had hailed the Turks as liberators from the hated Venetian yoke and aided them in many ways, but soon saw that they had only made their position worse. Many of them sought to advance themselves by adopting Islam. These Muhammadan Cretans, who were hated by

their former coreligionists, the Christians, even more than the immigrant Turkish elements, who were on the whole less numerous, were the real cause of oppression. They became the proprietors of the land; the fanaticalism of the island was centred round them, and were the real rulers of the island, so the Ottoman government could do nothing against them. We really know very little about Turkish rule in Crete up to the beginning of last century. Small things had often taken place but it was not till 1770 that there was a serious revolution. It was begun in the hope of receiving support from the Russian Empress Catherine II, who ordered Admiral Orlov to cruise in Greek waters, and was put down by the Turks with great rigour. In 1803 the governor (Mutasarrif) 'Othman with the help of the Christians managed to suppress the Jacobins for a brief period. He was however misrepresented in Constantinople and recalled. The Jacobins then became masters of the island again. Crete took a prominent part in the war which began in 1821 for the freedom of Greece. The rising assumed such compass that the Sultan (1821) had to summon Muhammad 'Alī from Egypt to his help. When, in 1830, the Conference of London established Greece's independence of the Sultan, Crete was not, as was hoped, given to Greece but to Muhammad 'Alī. Majestik Pasha, an Albanian, governed the island from 1832-1852, even after it was returned to Turkey in 1840. His rule ~~was~~ on the whole the best that Crete has had. After various smaller disturbances, the greatest revolution the island had yet seen broke out in 1866. It was only by great sacrifices on the part of Turkey and the granting of various demands of the inhabitants that peace was restored in 1868. In the so-called 'Organic Statute', a national assembly, mixed courts and other reforms were introduced. When Turkey was occupied in 1878 with the war with Russia, Crete rose again. The Treaty of Berlin did not grant the wishes of the Cretans and Greeks, but only bound the Sultan to carry out the provisions of the 'Organic Statute'. On the 15th August of the ~~same~~ year, the Pact of Chalepa (Chalepa near Canea) was signed by which the Cretans were practically granted self-government. Affairs however were not improved thereby; on the contrary they became worse. A period of purely party government followed during which the finances particularly suffered. In 1885 a revolution again broke out. The Pact of Chalepa ~~was~~ nominally modified, but practically annulled, and the island was governed by the governor sent from Constantinople. In 1894 Karathodoris Pasha, a Christian, was appointed governor, because the Cretans wanted a Christian; but he also was powerless. Almost the whole island was in revolution. He therefore sent in his resignation which was accepted in February 1896. Disorder increased more ~~and more~~; at Whittemide there was fighting in the streets of Canea between Muhammadans and Christians so that the Great Powers sent their warships to the island, which arrived on the 26th May. On the 26th July the Christian deputies declared themselves ready to adopt the scheme of autonomy prepared by the representatives of the Christian Powers and the Porto, but the revolutionary committee of the rebels in Campi was against this and the Muslims also were not satisfied. On the 3rd February 1897, there was again fighting in

the streets of Candia, and at the same time the town was set on fire in several places. The foreign Powers landed troops from their ships. Greek warships soon afterwards appeared, which attacked a Turkish transport. Greek troops were landed. During the war between Greece and Turkey which ended so disastrously for the former, affairs in Crete remained unsettled. In 1898, Germany and Austria withdrew their troops. The remaining Powers (Britain, France, Italy and Russia) divided the island into four sections each of which was ruled by one Power. After a rising of the Muhammadans of Candia and an attack on the English, the Powers demanded that the Turkish soldiers should be removed from the island by the 15th Nov. 1898, which was done. Prince George of Greece was then installed as High Commissioner for three years. Peace signed at first but the Muhammadans emigrated in large numbers. Discontent had been increasing since 1901 and in 1903 there was again a rising. The claims for union with Greece became stronger and stronger. The Powers were determined to maintain the status quo. On the 11 Oct. 1906, Zaimis, a former Prime Minister of Greece, became High Commissioner. On the 30th March 1908 he announced to the Powers that the conditions for the withdrawal of their troops had been fulfilled, namely: 1. the creation of a national gendarmerie, 2. the maintenance of order, 3. the complete security of the Muhammadan population. The Powers therefore resolved to withdraw their troops. In several places risings of the Muhammadans took place, who believed themselves to be left defenceless at the mercy of the Christians. On the 29th Oct. 1908, the Cretan National Assembly proclaimed a union with Greece. The Powers protested and on the 13th July 1909 resolved to station four warships to protect the Muhammadans and preserve the unalienable rights of Turkey. The last note of the Powers to the executive committee on the 21st-24th Sept. 1911 announced: "Les Puissances Protectors de la Crète ont décidé de ne pas pourvoir au poste de Haut Commissaire laissé vacant par Mr. Zaimis et de ne rien changer au statu quo de l'île". Neither side has been satisfied with or pacified by this decision.

CROJA. See 45 (1914) 3, p. 224.

CÜ, a river in Russian Turkestan, rising in the Tien-shan mountains and called Kökür on the upper part of its course, approaches within 4 miles of the west end of the Issyk-Kul and sends out a branch, the Kutenakul, to this lake; the river itself rushes through the Mam (Higam) ravine, receives the waters of the Great and Little Kebin on its right bank and on its left the Aysa and Kuragat with their tributaries and after a course of about 650 miles falls into the small lake of Saunul-Kul, about 80 miles from the head of the Sir-Darya. The CÜ forms the northern boundary of the Sir-Darya territory from the neighbouring districts of Semipalatinsk and Akmoinsk, and a part of its eastern boundary from the Semiretche territory.

From the mouth of the Kuragat to the Saunul-Kul, the CÜ flows through a dreary waste, which has never been of any economic importance; at the present day the banks of the river in this area are visited by a few nomads in winter only. On the other hand the pastures on the upper course of the river have always been of great importance for the nomads; below the Kum casting, the geographical conditions favour the development of agriculture, so that permanent settlements were made here at a very early period; the water used for irrigation purposes is, as in the valley of the Amu-Darya and Sir-Darya also, not for the most part taken from the main stream but from its tributaries.

Even in the pre-Muhammadan period, in the fifth century A.D., there were villages and even a town which was a centre of commerce here: as we know from Hsün-tsang's journal, the culture of this district had developed under the influence of Turanian civilisation. The land from the CÜ to the valley of the Amu-Darya is regarded by Hsün-tsang as being under the same civilisation. In his time, two great trade-routes led through the valley of the CÜ from China to Western Asia: one via the Ili valley and the Karak pass, and the other through Chinese Turkestan to Aksu, thence over the Bedel pass and along the south side of the Issyk-Kul. In the valley of the CÜ some pre-Muhammadan geographical names have

survived to the present day, such as that of the village of *Shetso* or the river *Asipara*.

Even in the oldest Arab itineraries (the *Khamshah*, ed. de Goeje, p. 29; *Kudma*, ibid. p. 200) several towns are mentioned in the neighbourhood including *Nawaksh*, which is also mentioned by *Yuhann* (ii. 252, etc.). The valley of the *Ca* was only affected in the extreme West, and then only temporarily, by the Arabs on their campaign of conquest, campaign against Kullin, the western Turan, in 604 = 51, mentioned in the *al-Akhbar*, ed. Leunberg, vi. 164; Islam does not appear to have penetrated here till the Selmanid period. The *Ca* itself (called *Sul-yu* or *Sul-shu* in Chinese sources) is not mentioned in Muhammadan literature before the Mongol period; but the *Ca* of the two *Sul-yu* (Sul + *para*, *sh*, "water, river") is apparently connected with that of the river. The name *Sul*, of the Hami region, mentioned by *Gantsh* (ib. Barthold, *Oriss* p. 244) & *Sindjar* (ib. *Oriss*, p. 205) seems to have survived at the present day in *Ust-urk* (the name of the entrance to the ravine); the word *sh* according to *Gantsh* means "narrow" (probably in a local dialect). The name *Shigshu* first appears in the *Zafar-nama* of *Shah* al-Din Yaqut (Arabic edition, i. 274), as does the name *Kashgar* (ibid.).

Down to the time of the Mongol conquest, the town of *Balkhash* (q. v. p. 614) in the *Ca* valley was the residence of most of the nominal rulers of Turkestan, of the Muhammadan *Ala-Khwa* (or of one of their branches) as well as after the sixteenth century of their descendant conquerors of the *Kashghar* stock. Almost all conquerors of Eastern Asiatic origin, who have invaded the western part of Central Asia, have passed through this district. The revolt against the *Kashghar* in 607 = 1010 and the destruction of the town of *Balkhash* probably affected the other settlements considerably, although only temporarily. In 1218 the land submitted to the Mongols without resistance. Three years later the Chinese pilgrim *Cangye* crossed the *Ca* on a wooden bridge; at this time there was a small Muhammadan town immediately to the west of the *Kashghar* pass and a number of villages between the *Ca* and the *Talas*; in addition to *agrawans*, *amirans* and the breeding of *sheep* were the only occupations followed. In 1259 again the Chinese traveller *Cangye* found a numerous population here but there were already many ruined sites which seem to show that a decline had set in. According to *Rashid al-Din* (the passage given by Barthold, *Oriss* etc. p. 35, note 2 is wanting in most manuscripts, and even in *Moher's edition*), "*Ca*" was in his time still a land with many villages which was governed by the princess *Kashghar*, daughter of the *Kashghar* who had died at the beginning of 701 = 1301.

To the same period (viii-viii = viii-viii centuries) belong, as the *Oriss* epigraphs show, the Christian settlements discovered at *Plahpek* and *Tashkent*. Even the district on the *Ca* had some importance in the history of Nestorian Christianity, as is clear from the title of the Bishop Metropolitan of *Kashghar* in the *Tibetan Annals*: "*Mahayana Chhangarac or Nanchuan*" (obviously the *Nawaksh* mentioned above). The inscriptions on the tombs are composed partly in Syriac and partly in Turki (in the *Syriac alphabet*); an Armenian epigraph of the same date has

also been found in this neighbourhood. When and how Christianity was definitely destroyed by Islam is unknown. The Catholic *al-Akhbar* speaks of a religious persecution in the year 1333, in the following year several Catholic missionaries perished in their persecutions. According to the inscription the land was visited at the same year by a pestilence. It has been supposed that this was the "Black Death" which appeared nine years later in Western Europe, but no mention is made of it by *al-Akhbar* who must have passed through this district on his route from Uygur to *Alash* or to the *Khitan*.

Certain it is that the constant wars and struggles for the throne in the thirteenth century (cf. the article *Kashghar*, p. 314) proved fatal to prosperity and civilisation, both Muhammadan and Christian. Even in the history of Timur's campaigns earlier towns and villages are mentioned on the *Ca*. In the time of Muhammad Shah, the author of the *Tarikh-i-Rajsh* (about the middle of the sixteenth century), there were only the ruins of ancient towns in this district; their very names had been forgotten. Muhammad Shah mentions an inscription on a tomb of the year 711 = 1311-1312 and several buildings, including a *mosque*, a *madrasa* and some domed buildings, all of which were in ruins. These ruins were called *Masara* apparently from the highest building among them. The only medieval building (but *ca.* arrived on this site not far from *Tashkent*) at the present day, is a high tower, called *Burana*. The tower has been frequently described and reproduced (cf. e. g. Barthold, *Oriss* etc. Plate VI and is apparently to be identified as the minaret of the *Tashkent* mosque; even its name, as *Petrovskii* suggests (*Zapiski vost. otd. Imp. Russ. arkh. obsht.*, viii. 351) may be derived from the Arabic *masara*.

Down to the sixteenth century, various nomadic peoples have occupied the *Ca* valley in turn; for a period the land was under the rule of the pagan *Kashghar*; even their successors the *Turkic* *Kashghar*, who had successfully effected in Islam before the Russian conquest. The *Kashghar* of *Khokand* had succeeded in subduing all the nomadic peoples on the lower course of the *Sir Darya* as far as the *Al* valley, several settlements were again founded on the *Ca* and its tributaries by colonists from *Masara* of *Nish*, two of which, *Plahpek* (*Plahpek* in the histories of *Khokand*) and *Tashkent*, were fortified. When the Russians penetrated into the *Ca* valley over the *Kashghar* pass (the *Ashtuk* of the histories of *Khokand*) from the *Al* valley, both settlements were taken in 1860 and destroyed. *Plahpek* in under Russian rule the capital of the district. A post road now runs north from *Plahpek* across the *Ca* and the easy pass of *Kashghar* into the *Al* valley; the old route via *Tashkent* and the *Kashghar* pass is no longer used, in fact the district around the modern *Tashkent*, north and south of the main stream, has no longer the importance it had in the middle ages. In the last few decades a considerable number of emigrants from Russia in Europe have settled here; lands in the *Ca* valley have also been allotted to the *Dzungars* who fled from Chinese Turkestan.

Plahpek et *Tashkent*: Histoire de la vie de *Masara*, *Tashkent*, trad. par Stan. Julien (Paris 1893); *Mémoires sur les peuples nomades*, trad. par

permanent occupation of the island but was merely a rubber raid. The town of Salamis-Comitene was destroyed on this occasion. The result was, if we may believe the Arab sources, that the island had henceforth to pay the same tribute to the Muslims as to the Byzantines. The Arabic name *Larnak*, wife of 'Ubayd b. al-Samit, was taken part in the expedition and died during the course; a town which is said to be here now. Larnaca is still regarded as the greatest Muslim sanctuary in the island (see *Yearn. of the Royal Soc.*, 1897, p. 38-101). A second expedition in the year 33, according to Rashidun, led to the first step towards the subjugation of Muslims and the extension of Islam to the island. Mas'ud's successor Vaid again visited the island, according to the Arab accounts, the correctness of which is doubted by Wallinga. One of the conditions of peace between 'Abd-Allah b. Mar'ath and the Emperor Justinian II in 69 (688-9) (Theophanes, ed. de Boor, p. 163) the Muslim of the Cypriot tribute between the two powers. In 123 (743) Walid II is said to have departed Cypriotes to Syria.

From these accounts it is clear that Cyprus in the Unmyd period, apart from occasional Arab *razzias* and quite ephemeral occupations, retained a fairly independent position between the two great powers, to which it was materially bound by the payment of tribute, in which point the sympathies of its Christian inhabitants were with Byzantium than Islam. Under the *Khilafas* the situation became still more favourable to the Byzantines. It is true that we read of successful expeditions against Cyprus, under Harun al-Rashid, for example, and even later. It is clear that on these occasions permanent occupation of the island was not thought of but Byzantine influence always soon became preponderant again (Byzantine conquest, 874-876). The population remained Christian as before; their hosts assured them friendly relations one with the other. The island was however used as a naval base by whichever side happened to be predominant — as for the time. After Nicephorus Phocas (963-969) we find it again in the possession of the Byzantines.

When Richard I's fleet passed Cyprus in 1191, Isaac, a son of the ruling house of Comnenus, was ruling there independently. The plundering of the ships of his fleet, which had been wrecked there, was followed by the conquest of Cyprus by Richard; he sold the island to the Templars, who soon passed it on to Guido of Lusignan. Franks held the island for almost 400 years; massive fortifications and churches still remain as witnesses of their rule. The Frankish kingdom of Cyprus was a powerful ally for the Crusaders; on the other hand it formed a permanent menace to the Muslim Kingdom of Egypt and Syria.

Habib I, the real founder of the Mamluk kingdom, therefore sent a fleet against Cyprus in 699 = 1210, but this was wrecked off al-Limna = Limassol. The first serious blow to the Lusignan kingdom was struck by the Mamluks who occupied Famagusta in 1273. It was not till the third decade of the 14th century that the Mamluks took serious steps to retaliate for the repeated raids by the Cypriotes. After Saladin himself (q. v., p. 688) had temporarily taken a part of Limassol in 127 = 1284 with his death a large expedition appeared the following year before al-Salibi =

Famagusta and after brief fighting at the salt-pans (*al-Malaka* now known as *Larnaca*) destroyed the citadel at Limassol. The next day, however, the Lusignan kingdom was struck in 129 = 1290. The Saladin army again occupied Limassol. A decisive battle was fought between this town and al-Malaka at Mithras, in which King James was taken prisoner. The Mamluks devastated the sanctuary of Maronitis (*Maronitis* = *Maronitis* and were captured al-Afrasiya (= *Lebanon*, *Nikea*). They did not however think of occupying the island permanently. They were content with exacting tribute, an arrangement which several times afterwards gave the Mamluk Salid an excuse for armed intervention. The kingdom of Cyprus then continued to survive; indeed in the reign of James II, Famagusta was again threatened in 12 Caterina Curiano, the widow of the king, ceded the island to Venice in 1289. It was still in the latter's possession when the Ottomans under Selim II proposed to conquer it. The *Malak* *Malak* occupied Nicosia in September 1570; Famagusta held out till the following August. Turkish rule which was established by a *ferma* was introduced with the greatest ease; — though the Venetians were not entirely blameless in this matter — and was a period of great decline. On several occasions (1665, 1690, 1764-1766) rising had to be put down by force. The decline of the importance of the island, which had begun with the exhaustion of the copper mines in quite early times, was sealed by the development of steamships. In 1832 Muhammad Ali occupied Cyprus and was formally granted it in the following year, but had to return it to the Sultan in 1840.

By the *Convention* of the 4th June 1878, Cyprus passed under English administration, the Turks retaining a nominal suzerainty, in return for which England pledged herself to guarantee the Asiatic possessions of Turkey against Russia.

The island is governed in the name of the King by a High Commissioner, who is assisted by a Legislative Council of 18 members (10 *ex officio* and 8 elected: 3 by *Angliotomani*; and 5 by non-*Angliotomani* voters) and by an Executive Council (of 3 members, only advisory). For administrative purposes the island is divided into 6 districts: Nicosia, Famagusta, Larnaca, Limassol, Paphos and Kyrenia.

With good government, Cyprus has again revived. Between 1878 and 1901, the population rose from 124,000 to 237,000. The majority of the inhabitants are Greek Christians; the number of Turks in 1901 was 48,500, and of Muslims 31,300. The economic prosperity of the island is also developing. Roads have been made and a railway from Famagusta to Morpho via Nicosia laid down. In 1900, which almost doubled between 1900 and 1907, imports practically balanced exports (chiefly cotton and barley) with a value of £ 600,054 and £ 603,530 respectively.

(H. HARTMANN.)

D.

DABBA is **DAW** or **TAUKH** or **ALYAS** or **ALYAS** was the ancestor of the well known tribe of that name. The name (which means a beard, *lucida mandibula*) is borne also by Dabbu b. 'Amr of (Judah), Dabbu b. al-Harith b. Khatib, and others (cf. Tabari, i. 2710—2712; in 1359 Dabbu b. 'Udd was brother of 'Abd Mani and of Munir (variously 'Amr) and uncle of Tamim b. Mu'ir. He is sometimes included amongst the Rabba which strictly denotes the three sons of 'Abd Mani only.

The pasturing grounds of this tribe lay to al-Yamama, but included the Wadi 'Ajl in Nadjd (Wustenfeld, *Geograph. Tabellen*). During 222 was to 'Abu and 'Ubayy, the former at one place settled amongst Dabbu, but, owing to a quarrel, they had to leave, and when the break of the war between the Baya Tamim and the Banu 'Amir b. Sa'ad, 'Abu entered the territory of the latter tribe. Upon this the tribes of 'Ubayy, Asad and most of Tamim, together with Rabba and the Rabba, united in an attack upon 'Amir and 'Abu. They were, however, defeated at the battle of 'Uzaym. This happened some time about the year 599 A. D.

When, in the Caliphate of 'Abd Rahr, the prophetess Sajah appeared, her claims were admitted by many branches of Tamim, especially 'Ubayy b. Munzir, but Rabba and the Rabba held aloof. On the defeat and death of 'Abd 'Ubayy at the battle of the Bridge in the year 12 A. H., or 634 A. D., Rabba is mentioned as one of the Rawad tribes who cast in their lot with al-Muthanna; and they distinguished themselves by their defence of 'Ajl in the battle of the Camel in which they lost 1000 men. They settled in Bagra and took their full share in the repeated disturbances in that town. They opposed 'Ubayy and were engaged in the wars of 'Ubayy. When Salim b. Khatib held Bagra for the Umayyads in 132 A. H., Rabba were opposed to the 'Abbasid cause. They took a half-hearted part in the expedition of 'Abbas b. 'Amr al-Ghassawi against the Ghassanids in 287 A. H.

A few members of the tribe migrated to Spain (Makki, i. 185). Rabba is one of the three tribes of al-'Arab, who did not form alliances with other tribes. Eventually, however, they became absorbed in the Rabba. (cf. *Sanhi*; *al-Jawari*; and Lane).

Rabba b. 'Udd, the eponymous hero of the tribe was the originator of several expressions which became proverbial (Makki, *loc. cit.* Prov., i. 350, 359, 601).

Histography: Tabari, by index; Ibn 'Abd Rahr, *Udd al-Farid* (Cairo, 1303), ii. 48; Makki, iv. 326; *Sanhi* de Perceval, *Ann.* 400 ff. 191; Sprenger, *Die Geogr. Arabier*, i. 104, 316, 339.

(T. H. WEIR.)

DABBA, any animal that walks, creeps or crawls upon the earth. 'And God hath

created every Rabba of water, and some of them go upon their belly, and some go upon four legs, and some upon four'. (Sura 24, v. 16) Here the word is used of both rational and irrational creatures. But *lucida mandibula* applies to a head that is shaven, especially the horse, mule, or ass; it signifies both the male and female.

Ubayy al-'Arab is one of the greatest signs of the resurrection. It is said to be a horse six cubits high, the parts of whose body belong to different animals, — the head of a bull, the ears of an elephant, the legs of a camel etc. It is to appear in Yama or between al-Sila and al-Murra. In the face of the anbellows it will put a black mark, and on the face of the believer a white mark. These marks will spread until the whole of the face becomes white or black, and then believers will be distinguished from unbelievers. It is said that the horse will bring with it the end of 'Ubayy and the end of 'Ubayy. With the first it will strike believers on the face and mark them with the word *lucida*; with the latter it will stamp the word *lucida* on the face of the unbeliever.

These traditions are based on Sura 27, v. 2: "When the sentence shall be ready to fall upon them, we will raise a host to come forth unto them from out of the earth" etc. — On the *Ubayy al-'Arab* mentioned Sura 34, v. 6 supra 418. *Ar. Arab.*

Histography: Lane, *Udd al-Farid*.

(A. S. HUTTON.)

AL-DABBI, **AM** **LYAS** **ALYAS** or **YAYRA** or **ALYAS** or **AM** **ALYAS** (and al-Kurayb), a Spanish Arab scholar of the 11th (12th) century, was born at Vélez (Málaga, Minorca) west of Lora, or appears practically certain from inference to himself and his family in his work, and began his studies in the latter town when not yet 10 years of age, except for his journey to North Africa — (Cairo), Marrakech, Bujaya (Bouja), and Alexandria — he seems to have spent most of his life in Marraja (Marra) and to have died at the end of Haid' ii. 399 = beginning 1203. Of his writings there has only survived a valuable biographical dictionary of the Arab scholars of Spain prefixed by a brief survey of the history of the Arabs in Spain, which is supplemented by 'Abd al-Wahid al-Murashid's introduction (*History of the Almohades*, ed. Hany). For the rest, al-Dabbi follows closely al-Humaydi's *Udd al-Murashid* (which comes down to 450 = 1058) and expands it by the addition of biographies for the next 150 years. The work entitled *Bughyat al-Murashid* (and *Udd al-Murashid*), as stated by Huchelmann, i. 340 ff. *Udd al-Murashid* was published by Huchelmann and others in 1835 from the good, old but in part badly preserved unique manuscript in the Escorial in the third volume of the *Bibliotheca Arabica Hispanica*.

Bibliography: *ap. l.* Fr. Pado Bolgers, *Parage de l'Asie Mineure* (Paris 1898), p. 212, p. 257-259. In addition to the two excellent copies made by Maronites in the second half of the 18th century, of the unique manuscript in the Escorial and the copy belonging to the Société Asiatique in Paris of which I know nothing further, for completeness there may be mentioned the equally defective *Version de Maron* : *Commun* copy in Copenhagen, No. 103, which is also mentioned in my bibliography. (C. F. RAYMOND.)

AL-DABBI, Abd 'Ismā'īl 'Asmā' b. 'Ismā'īl, author of a commentary on the *Maṣṣabih* (See the article *al-Murayyān*.)

DABIK, a town in medieval Egypt famous for its manufactures of cloth, belonging to the district of Damietta and later to the province of Ghazbiya (the *Thalabiyah*, 1774 *al-Bihar*, v. 37, *Im* *Uṣṣā*, *al-Bihar* *al-Sayyid*, p. 77). The name is variously given (cf. *Idrisi*, *al-Bihar* and *Uṣṣā*, p. 150 note 1; *Idrisi*, *al-Bihar*, II, 546, 548). As no exact details of its situation are given and as Dabik is regarded as one of the manufacturing towns belonging to Damietta and Tinnis, it may perhaps be identified with the modern Dabik (pronounced *Dabik* as *Dabik*) which is placed 8 miles south of Shabshah on the large scale map (1:50,000) of the Survey Department, sheet N. E. V., 8 to 31 30' N. lat. (cf. Bulnes *Rep. Directionnaire Géographique*, p. 105) and only about 35 miles from the site of the ancient Thinite. The Dabik cloth was woven of linen but seems to have been occasionally or regularly interwoven with gold and silk. Originally a name denoting only the place of origin, like Tinnis, Dabik cloth came to be the name of particular kinds of cloth, which were also made in Egypt for example (Yaqut, *op. cit.*, I, 273). But there were even more costly silks in Egypt — one may conclude from the numerous dates paid to *Uṣṣā* (*al-Bihar*, ed. the *Im* *Uṣṣā*, *al-Bihar*, II, 104, 11). In the *Uṣṣā* of the *al-Bihar* 'Asmā' (Turkish made of *ṣabshah* cloth of gold and silk, the gold of which alone without the silk and the cost of weaving was worth 500 *ḥana*). The length of one of these *ṣabshah* cloths was 100 *ḥana* (*al-Bihar*, *al-Bihar*, I, 226, 227). The material (*ṣabshah*) must therefore have been very thin. There were also thick materials for garments, which were likewise called Dabik (*Yaqut*, *op. cit.*, I, 273, *al-Bihar*, *al-Bihar*, II, 104, 11). The Egyptian Dabik was an important and well-known article of commerce (*al-Bihar* *al-Bihar*, *al-Bihar*, I, 226, 227). (C. F. RAYMOND.)

DABIK, a locality in northern Syria, in the district of 'Asmā' (Yaqut, II, 313) on the road from Hama to Antakya (Yaqut, II, 1103), on the Nahr Kawk above Hama (Idrisi, *Zeit. der Dialect. Pol.-Veren.*, VII, 10). These statements suffice to establish the identity of its site with that of the modern village of Dabik (now it is *Dabik* = Turkish *Tarabik*). Dabik was the headquarters of the army and the base of operations for campaigns of the Mamluks and early 'Abbasids against Kaim. The Caliph Sulaiman b. 'Abd al-Malik in particular spent a good deal of time here. He died in 947 (957

September 767 and was buried there. After his death the place *Kay* b. *Ḥafṣ* had bought as future capital in the mosque at Dabik to the man whose *Ḥafṣ* desired should succeed him; and when this was done, a will was produced which designated 'Umar b. 'Abd al-'Aziz as this man (see *Waddah*, *Arab. Acad.*, p. 105 of 1917). The *al-Bihar* distinguished Sulaiman's tomb in Dabik after their victory (*al-Bihar*, *al-Bihar* *al-Bihar*, II, 473).

The name is best known however by the decisive battle fought between the Ottoman Selim I. and the Mamluk Kaṣṣāw al-Jahid on the 25th Rabi' al-Thani = 24th August 1516 on the field of Dabik (*War* *al-Bihar*) not far from the sanctuary of Nubt Dabik which is still highly revered at the present day (cf. *Yaqut*, II, 537, 538, 539, and *al-Bihar*, II, 537, 538, 539). The Mamluk Sultan fell and the fate of the Egyptian kingdom was sealed (see e. g. *Hammer*, *Gesch. der Arab.*, *al-Bihar*, II, 474, 475; *Jorge*, *Gesch. der Arab.*, II, 536; *West. Hist. der Arab.*, II, 413).

There is a popular legend that a decisive battle will once again be fought on the blood stained field of Dabik, in which Turks and Franks will fight for the mastery.

Bibliography: Cf. in *Strassburg, Palestine* under the *al-Bihar*, p. 61, 420, 503. M. Hartmann in *Zeitschr. der Ges. für Arabische Stud.*, 1888, 318, 319, 320, 321 and in *Zeitschr. der Verh. zur Arab.*, I, 102.

(R. HARTMANN.)

DABIL. (See *DAIR*.)

DABIR, the prophetic name of Mirza Sa'adat 'All, son of Mirza Ghulam Haqq, of Lucknow. He was a pupil of Mirza Asadullah Khan, called Qasim, and is noted chiefly as a writer of *ḥikmah*, or singular poems on the death of the martyr of Kashmir. (J. P. BLUMHART.)

DABISTAN, the title of a Persian work, which describes various religions and special reference to religious conditions in India to the 18th century. It is based partly on the second books of the various *ḥikmah*, and partly on oral statements of their adherents or the author's own observations; the *al-Bihar* *al-Bihar* literature the subject has also been used in many chapters. The religion of the Persians is first discussed with special thoroughness; next follows that of the Hindus and after very short chapters on the Tibetans, Jews and Christians, Islam and its sects is treated of; the work concludes with sections on the philosophers (Pitanees and Neoplatonists) and the *ḥikmah*. Mirza Fari was long erroneously regarded as the author; the author really seems to have belonged to an enlightened Parsi sect and probably three manuscripts are correct which agree with *al-Bihar* *al-Bihar* *al-Bihar* in the *al-Bihar* in attributing the work to Mirza Asadullah or Mirza Asadullah. From internal evidence it is clear that the author was born in India shortly before 1020, came to Agra in 1020, spent many years in Kashmir and Lahore, visited Persia (*al-Bihar*) and was also acquainted with the west and north of India. The work was concluded between 1064 and 1067.

Bibliography: *Dabistan al-Awāṣṣān* (Calcutta 1224 = 1809); — other editions have been printed in Tehran, Bombay and Lucknow; *The Dabistan or School of Mirza Asadullah*, translated... by Dabir Shāh and Anthony Troyer

they used the place where he is so manifest himself at the end of time. According to some, he is a Jewish contemporary of the Prophet of the end of Sa'at in Sa'at Jinn al-Waḥī, p. 142-143; others say he is one of the messiah which the last of this name (Jahannam al-Masīh, ibid., p. 142) is to be. In his *Chawāṭir* (Istanbul, 1840), ed. Zotochberg, i. 67 (recept.) mentions him a kind of 'Alī b. Sūrat, a giant, king of the Jews who is to rule the whole universe; in this passage the author applies to himself the Jewish prophecies relating to the Messiah. He is to appear mounted on a sea as large as himself, when Gog and Magog break through the wall. His reign is only to be a few days, nevertheless he will have time to go over the whole world from East to West and from South to South. His power and all his gigantic stature will disappear before him and the Mahdi; the Mahdi shall stay him. Tabarī's account says that Dajjal's real name is 'Alī b. Abū Ḥanīfa.

He is to appear either in Shamsān or at Kūfā as the Jewish *qawm* of Ispahan (Ibn al-Warīd, *Isṭiṣṭāṭ*) cf. also al-Buhārī, *Ḥadīṣ*, p. 105-106. (B. CAENAL DE VALER.)

DAF, a dialect word meaning 'mouth', and hence applied in local nomenclature to a gorge or defile. It is used as an equivalent to the Pers. *dar* which is similarly employed, and which it is etymologically related (cf. *Ar. asfāṭ*) Example of use: Gaudakīn Dāf, near the Rōḥān Dās; often spelt 'Dāf' in maps.

(M. LAWSON'S NOTES.)

DĀGH, the portul name of Nawwāb Mirzā Khān al-Dīkh, one of the most distinguished Urdu poets of modern times. He was the son of Nawwāb Shāh al-Dīkh Khān, and grandson of Nawwāb Ahmad Bakht Khān, and was born in A.D. 1831. He obtained an excellent education under Mirzā Khān al-Dīkh, the author of the *Asfāṭ al-Lughat*, and studied Persian with Nawwāb Yūsuf 'Alī Khān, ruler of Rampur, during his stay at Dīkh. Dāgh had a remarkable aptitude for practical composition, and, under the tutelage of Shāh Mirzā Khān, he became so proficient in the art that, when only 12 years of age, he used to take part in the *asfāṭ*, or poetical contests, of endowed poets, which were held under the patronage of the emperor of Dīkh. On the deposition and exile of Mirzā 'Alī Khān, Dāgh left Dīkh and went to Rampur, where he became the intimate friend of Nawwāb Saīd 'Alī Khān, the son of Nawwāb Yūsuf 'Alī Khān (on the death of his father in A.D. 1845). Dāgh was appointed to be one of the Court officials at Rampur, and had ample opportunities for writing poetry and associating with the leading poets of Lucknow and other cities, who used to assemble at Rampur. In A.D. 1853 (A.H. 1268) Dāgh went to Haidarabad, and was honoured by becoming the poetical instructor of the Nizām and members of his staff. He died there in A.D. 1853 (A.H. 1268). His biography has been written in Urdu, with copious extracts from his works, and literary press notices, by Mirzā Muhammad 'Alī Shāhī, formerly Director of the Educational Department of Jamia and Kashūr, and was published at Lahore in 1905. (J. F. HENNING.)

DĀGH (N.) "Mountain".

DAGHESTAN, properly DĀGHISTĀN (Mountain land). Sources: Henning, *Albān*, ii. 243 noted to

Meaning that the name was pronounced Daghestan even by people also belonging to it). A Russian territory (about 700 the west shore of the Caspian Sea between 41° 30' and 41° N. Lat., but an area of 13,248 square miles and a population of about 700,000). Its boundaries are: to the north the Dnieper, to the south the Caucasus, to the east the watershed between these rivers and the Altai, a tributary of the Kura; the territory is divided into nine districts (rayons). Its present boundaries and its constitution as a Russian territory date from 1860 after the war with the mountain tribes; its name which is proved by a native linguistic phenomenon (lack of a mountain, with the Persian termination used to form the names of places) appears to be first found in the 17th century. Tiflis (Tbilisi) is the capital of the territory and the residence of the gubernatorial governor, but the number of its inhabitants is much less than those of the great power Tashkent and Permian (now the only harbour in Daghestan).

The highlands and lowlands on the coast were never united in any length of time in the possession of one people or under one dynasty before the Russian conquest. The lowland coastland is itself divided into two parts by the Pass of Derbent, only 1½ miles broad, of which the southern belonged to the settled states of western Asia, and the northern to the nomadic kingdoms of Southern Russia. Neither the peoples of the north nor those of the south have had any appreciable influence on the ethnographical conditions of the highlands. Before Russian supremacy was established, no foreign conqueror had succeeded in permanently subduing the highlands; from time to time the mountain tribes succeeded in conquering portions of the lowlands, but this always in a short time to the resurgence of the political bond between these conquerors and their relatives who had remained behind in the highlands.

In ancient times the southern portion of the coastlands as far as Derbent belonged to Albania; to the north, apparently in the mountains, lived the peoples called Abas and Abas by Strabo (Ch. 505). The Armenians, and after them from the 7th century A.D. the Persians, had to fortify the pass of Derbent against the nomadic tribes. The story of the conquest when conquered by the Arabs leads one to conclude that the civilisation of the Albanian Empire and probably the highlands also had been not without influence on the neighbouring mountain-tribes. Several rulers of these regions are mentioned by Persian titles, e.g. the Tatar Shah, ruler of the latter now called Tabasaran (west of Dushanbe); in the same region the Daghistan (from the Persian word, coat of mail) who were famous warriors, the modern Kabard (Turk: Kaba), whose burial customs have been described by Abu Hamid al-Andalusī (lived in Baghdad, *Zuḥrī* 100, ed. 1882, iii. 103) and seem to have been under the influence of the Iranian religion. Whether Christianity had been brought from Albania and had any influence on the peoples of the mountains and coast at that early period, cannot be ascertained from the documents at present.

In spite of individual successes of Arab arms in the northern parts of Daghestan (particularly under the Caliph Hishām, 105-123 = 724-743, whose brother Maslama was the first to establish Islam in Derbent), none in the Arab period,

Derbend still retained the position as a border fortress which it had held under the Sassanians. Trade with the neighbouring peoples seems to have become rapidly more active, as was the case elsewhere also, after the Arab conquest (this before; but it was at first only) Christians and Jews and not till later Muhammadans, who professed thereby. As early as the time of the Armenian Patriarch Sahak III. (677—703 A.D.) the "Huns", i.e. the Khazars, are said to have adopted Christianity; in the reign of Harun al-Rashid (780—803—786—809) the Jews succeeded in converting the ruler and a body of his people to their religion.

The geographers of the 9th—10th century give us fuller details of the ethnographic and political conditions in Daghestan as well as of the domination of the three religions. The Arabs only penetrated by addition to Derbend, the neighbouring cities which, according to Mas'udi (Mas'udi, II, 40) were only three miles (some faraway) from Derbend. In Mas'udi's time (II, II, 73) Mas'ud, the ruler's son of the Emir of Derbend, 'Abd al-Malik, was ruling in Tabaristan. The prince of the adjoining Khazars (this is the correct reading according to Marquart, *Orientalische Literaturzeitung*, p. 492; previously all three religions, according to the Rus' (ed. de Hake, p. 147 ff. 149) and observed Friday with the Muhammadans, Saturday with the Jews and Sunday with the Christians in Mas'ud's Khazarah, II, 39), he appears as a Muslim and he even said to have founded an Arab genealogy for himself; but there was no follower of Islam except himself in his country; this principally belonged to the Khazar empire (II, II, 73), the prince bore the title Sahib. Further north ruled the Persians, prince of the Gurgs, also a Muslim; south of his lands were the Chinese (Sogdians) and further north still lay the impenetrable mountain lands of Zhetysay (or Zhetysay) where all three religions had adherents, and lastly the land of the Christian prince of Sakh who bore the title Khagan (or Khagan). According to the Rus', only the inhabitants of the capital on a high mountain were Christians, the other sections of the people heathen. The Rus' gives the title 'Avar' to the ruler. According to Iskhak (ed. de Hake, p. 233) the frontier of Sakh was only two days' journey from the town of Samandar, the coast; the Christian ruler of Sakh had made peace with the Jewish ruler of Samandar, a relative of the king of the Khazars, as well as with the Muhammadans in Derbend. According to Iskhak Samandar was four, and to Mas'ud eight days' journey from Derbend and it was called as a flourishing city; there were 4000, or according to others 5000 Christians there; the Muslims had their mosques, the Christians their churches, and the Jews their synagogues there. In the west the land of the Sakh bordered on the land of the Alans.

Samandar seems to have lain in the northern part of the mountains, near the lake Tazk or Tazk and the modern Petrovsk. The land of the Sakh lying next to this part of the coast corresponds to the district now inhabited by Avars (this is the royal title mentioned by Ibn Khaldun); the chief town in this district, formerly the residence of the Avar Khan, is Khilinsk which is said to have been founded by the Arabs. Mas'ud does not appear to define the location of the land of the Khilinsk accurately; the correspon-

ding name Khilinsk (from Turk. *khil* = a coat of mail) is now borne by a village much farther to the south, in the district (район) of Kank-Kuban. The name Khilinsk is apparently to be connected with that of the village of Kank, the capital of Khaz-Kumukh or Khaz-Kumukh, whether it is only an accident that the Turkish Kank is in the northern part of the modern Daghestan bear the same name as the Georgian people, is still uncertain. The name Khilinsk, according to Marquart (ibid. 122), corresponds to the name of the Khilinsk, and the capital of this region to the modern village of Khilinsk.

All these peoples are now comprised under the name "Lazgians". The Arabs seem to have applied the name Lazg to a particular tribe, whose territory cannot now be exactly located. According to Iskhak (ed. de Hake, p. 205), the land of the Lazg was in the plain between the Saur and the town of Samandar, i.e. south of the modern Daghestan; on the other hand, Mas'ud (ibid. 122) describes the Lazg as a numerous people living in the highest mountains of this region; there were "unbelievers" among them, who were not subject to the prince of Samandar; "strange tales" were told of their family life and customs. The association with Samandar shows that Mas'ud thought the Lazg lived in the mountainous region on the upper Saur. The Rusians also originally applied the name "Lazgians" only to the people of Southern Daghestan in opposition to the "Khil-folk" of the northern frontier (Iskhak, from Turk. *khil* = "mail").

In the centuries following, Islamic seems to have continued to make but slow progress in Daghestan. The power of the Khazar kingdom was broken by the Russians in 965 A.D.; even the most southern part of the kingdom with Samandar was on this occasion laid waste; the Christian Alans seem to have profited by the situation, as at the time of the Mongol conquest their territories stretched much farther to the east than in the 10th (11th) century. On their early raids into this region, the Mongols (Ibn al-Athir, ed. Forberg, II, 252) first came in contact with the Lazg, north of Derbend, who at this period also consisted of "Muhammadans and unbelievers", then after passing through some other peoples further north, they reached the Alans. According to William of Rubruck, who visited this region in November 1254, the Christian Alans lived in the mountains and "between the mountains and the sea" (Ibn Sa'id, I, 2, Muhammadan Lazgians (Lazg); 294 William himself describes a fortress lying on the coast region, only a day's journey from Derbend as a "castellum Alamanum". The Mongols had not yet succeeded in subduing these tribes, the passes leading from the mountains to the plains had to be guarded by special troops to prevent the bands passing up the slopes from the ranks of the mountains (cf. F. H. Schmidt, *Kaukasus*, Berlin 1885, p. 24 ff.).

In the 12th and 13th century, the land as far as the pass of Derbend and consequently also the land to the south of it was belonged to the kingdom of the Sakh Khazars. The names of the two most important tribes in Daghestan, the Khilinsk (or Kank) and the Kank-Kumukh first appear in their modern form in the history of the campaign of Timur (1397—1398—1399—1406). The land of the Khilinsk lay west of the pass of Derbend and

belonged to the kingdom of Toghianish; the *Kalish* are described by Shams al-Din Yaqut (*Yaqut-Nama*, Ind. ed., I. 742 *et seq.*) as a people "with one religion" (*bi din*) as "with a holy religion" (*bi din-i quds*) so that Islam was not then the dominant faith among them. According to Barukh (Kamard, *Shahar*, II. 1097) in the 10th century, there were still many "Christians — Greek, Armenian and Roman Catholic — among the *Kalish*; on the other hand the ruler of the *Kalish* (*Khalid-Nag*) mentioned in the account of his journey by Afanash Nikiish bears a Mohammedan name.

The *Kalish-Kish* were Mohammedans and were regarded as the conquerors of Islam against the neighbouring heathen tribes; their prince was called Shahrban North or the *Kash-Kish* dwelled the *Ashkhal*; the *Kash-Kish* helped the latter against the *Thur*; they were therefore approached by him with having obtained their reputation as warriors of the faith by their alliance with these unbelievers (*Yaqut-Nama*, I. 777 *et seq.*). The *Ashkhal* therefore had, and at this time adopted Islam. In the history of these campaigns the town of *Tark* is mentioned. The *Kish-Kish* lived between the *Kash-Kish* and the *Kalish*, i.e. in the district of the modern *Kolch*; they still retained their ancient name of warriors and brought with them all which they had made, as offerings to the conqueror (*ibid.*, I. 781).

The tribal name *Ashkhal* may safely be connected with the name of the village *Ashkhal*, the capital of the district of *Yark* (*Yarkand*). The language of this region at the present day shows only dialectal differences from that of the *Kalish*; but the inhabitants were never subject to the prince of the *Kalish* and have never obeyed any authority but that of the elders of their tribes.

The account of the campaigns of Timur affords considerable proof that the conditions found by the Ottomans in the last period of their rule in Daighestan (986—1013 = 1578—1606) could only date from the 12th (13th) or 14th century. Nevertheless the historical tradition which was first preserved about this time depicts this state of affairs as having existed in the early centuries of the Muslim, just as the Jews possibly even before the Arab conquest had located various events in the history and traditions of their people in Daighestan (cf. Marquart, *Seidenstr.*, p. 201, and as at the present day the smallest "mountain Jews" (*Yaghut*) say their forefathers were brought hither to their country and Mohammedan conquest, as all the Mohammedan tribes claim to have been converted by Abu Muslim in Islam, and their rulers to be descended from Arab governors, left behind by Abu Muslim. The title *emir* of the ruler of Tabasman was explained as the Arabic *amir*; Arabic cognates were also found for the title of the *Yam* of the *Kalish* (*Yam*) from the Arabic (*am* "name") and of the *Shamshat* of the *Kash-Kish* (now written *Shamshat*). The word *Shamshat* was said to be derived from *Sham* = Syria; various explanations were given of the second syllable. There was also another etymology (*Shamshat*). It is not impossible that the pronunciation of the various titles became influenced by such etymologies. It certainly is not an accident that the title of the ruler of the *Kash-Kish* appears in the oldest Russian documents in the same form (*Shamshat* or *Shamshat*) as in *Shams al-Din Yaqut*; it is obvious

that both Persians and Russians could not have independently corrupted *Shamshat* to *Shamshat*. It is enough more probable that the present form of the title only arose out of the above mentioned etymologies. The subjects of the *Shamshat*, the *Kash-Kish*, were seen to have distinguished themselves fighting for the two faiths under Abu Muslim and to have received at this early period the complimentary appellation "*Shamshat*" from the Arabs. The chief mosque of the village of *Kish* is said to have been built by Abu Muslim as is evidenced by an inscription (which is of course much later) on the interior of the main entrance. In *Yaqut*, the Arab capital, Abu Muslim's tomb is still shown as well as his sword and cloak, on which the date 150 A.H. is said to be inscribed. The whole story of course shows of the fact that Abu Muslim never was in Daighestan; to reconcile the legend with history, it has been asserted that it is not Abu Muslim himself that is referred to here but another Abu Muslim; in support of the similarity of names, this Abu Muslim was confused with *Shamshat* as has in historical works and even in inscriptions "*Abu Muslim*," "*Abu al-Malik*" sometimes appears as conqueror of Daighestan and ruler of Merv. A *Shamshat* Abu Muslim is said to be buried in *Kish*, who lived in the 11th century A.D. Even Russian scholars have hitherto been misled by the incorrect tradition and the irresponsible compilations of native scholars.

The first historical prince of the *Kalish*, who bore the title *emir*, appears to have been the Sultan *Alimut Khan* who died in 998 = 1587-1588. He is said to have founded the village of *Shamshat*, where the members of his tribe assembled to transact their business (whence the name); by his order the provisions of the customary law were collected to form a code which the ruler "*Shamshat*" was to observe, a proceeding which Mirza Hasan Rikhi, the author of the *Atlas* (*Atlas*, p. 85), regarded as "great importance" (*Shamshat*). Among the prince's innovations is mentioned the law by which *Shamshat* was to be excluded from inheriting their father's estate.

About the middle of the 11th century (c. 1040), a part of the *Kalish* separated from their composition and migrated to the lands lying south of Daighestan, *Yamshat-Khan*, the leader of these emigrants, succeeded in founding a new principality in *Kalish* and *Kash*; with "Ali Khan" prince of *Kash* and *Yamshat*, in the 11th century, was descended from this branch of the *Kalish*. The Ottoman traveller *Kutub-Celebi* (*Sinhat*, II. 291 *et seq.*) in 1647 met these independent *Kalish* between *Shamshat* (the modern *Shamshat*) and *Shamshat*, the settlement given by *Kutub-Celebi* shows that the *Kalish* did not then speak *Langue* as they now do, but *Shamshat* unless there is some incontestable error here, this fact is of great importance for settling the question of the origin of *Kalish*.

The *Shamshat* of the *Kash-Kish* (or *Shamshat*) gradually extended their power from their mountain home in a westerly direction to the coast; in the 17th (18th) century these princes moved to spend the winter in the lowland at *Shamshat* and the summer in *Shamshat*. The *Shamshat* *Shamshat* died in 980 (1578) at *Shamshat* and his sons were divided among his sons. The power of the house

was thereby much weakened; the Ulster-Scots who remained in the mountains gradually assimilated and lost independence of their former culture. Since the death of the Shamshul Khojah-Mirza in 1649 (1030-1046), the Shamshulis have only ruled on the coast in Bulbul or Terikhs (Turk); some of these princes came to Kamsak where the tomb of the early rulers of the dynasty may still be seen.

This ~~name~~ ~~country~~ is ~~born~~ born by a village
to the ~~now~~ ~~present~~ ~~of~~ ~~the~~ Shāhādāt, ~~and~~ far
from Truth Khān Shāh, the present capital of

a "believer".

The inhabitants of Drachman never in any way opposed the Christian conquests of their Mohammedans. The historian Ali Colah, who took part in the campaign of the year 1578 and has described it in his *Memor-Nama*, called the attention of the Mughals to the industrious practices of his subjects; one section of the tribe dwelt which was called *Sufi* ("domestic") on account of its unintelligible language, he remarked by then as having had community of wives; a *Hanooch*, *Gurkhi* des *Chamashin* *Kutub*, vol. 1, p. 116.

To the same period belong the earliest Russian attempts to subdue from Astrakhan the lands of the Northern Caucasus, including Daghestan. In 1522, a Russian army under Prince Ilya Mstislavskiy succeeded in taking Terkiya and building a fortress on the Kuma or Sulak, but the Russians were soon afterwards expelled by the sons of the Khan of Terkiya and had to retreat over the Sulak. An attack on Terkiya in 1604 under Husein and Morozovskiy had still less success.

Since that time three powers, Persia, Turkey
and Russia, have claimed suzerainty over Afghanistan,
as well as over the other lands on the western
shore of the Caspian Sea; the native rulers sought
alliances sometimes with one and sometimes with
other power. It was not till the sixth century
that the struggle was finally decided in favour
of Russia. After 980 = 1376, in addition to the
Shahshah and the Khan, the ruler of Tabaristan
(his name was) in this time was written Tahir-
zadeh and the ruler of the coast submitted
to the Sultan. Mirza Asker Jangheh Vardan
only here in 1015 (1606), he was ordered by the
Tsar Kharizmshah, while the Shahshah continued
faithful to the Turic monarch. After provision
of the treaty of peace made in 1021 (1623), it
was provided that the Shahshah and the other
princes subject to him were bound to con-
tinue still by the Persian Emperor Kharim-
Khan until year 10 the Turk in 1028 = 1639)
which occurred his army, the Shahshah, was de-
posed by the Shah and confirmed in his rank;
he had already received confirmation from the
Tsar Michael (John Dreyer, p. 32).

When the Salween empire began to decline under the weak rule of Shih Huzan, a revolution against Peking rule broke out in Yunnan also. At the head of the movement was Chuai-Sunghui-Khan, who a short time previously had founded a new principality in the land of the Chuan-Chiang. Allied with the Tibetans and the leader of a popular movement, the Moshan (Moshi) Chuan-Khian, he succeeded in taking Shingchi in 1223-1212, when upon the allies sent an embassy to Constantinople, received rules of commerce, titles and ornaments from there and were accepted as subjects of the Salween. Affairs took another turn on account of the intervention of Khamti, 300 Russian merchants had been slain at the taking of Shingchi; so Khamti had received an satisfaction, thus the Great emperor sent a campaign to Khamti at the end of the Northern was and occupied it in 1223; soon afterwards the other provinces on the west bank of the Caspian Sea had also to submit to Khamti; by the Parisian Treaty of 1794, Russia's claims to these countries were recognized as her own.

Chinese rule did not last long on this occasion; when K'ang Shih had succeeded in establishing the unity of Korea, all the lands south of the Yalu were given back to him by the treaty of the year 1742, and by that of 1745, the land between the Yalu and the Suiho River. The frontier had withdrawn its claims in 1733 after its advance on Hakkou by the Kaimo Tatars which was failed by the Russians, but hostilities were resumed at a later period; the native population also, particularly in the highlands, stubbornly resisted the new Suiho, it was only in the course of this K'ang Shih was able to establish his authority permanently. The Shambhal (Aulais) had taken the oath of allegiance to Peter the Great in 1744 and given him his assistance in the campaign of 1747, but had afterwards risen against the Russians; in 1755 he was sent to Lapland and the rank of Shambhal was declared abolished; the rank was now reserved by K'ang Shih and given to K'ang-P'ing-Shan, the son of the banished ruler, in spite of some fighting (particular in 1753 and 1744) the population of the highlands remained in obedience.

After the withdrawal of Nāth (1880-1881) there was no strong government in Persia for half a century, which might have maintained Persian suzerainty in the region. Even the local nobilities of the kingdom could not be protected from the ravages of the princes of Afghanistan; for example, the town of Amol was plundered by Fāzr Andr Khān in spite of the treaty of 1773. Russia again made its influence supreme in Afghanistan. When the emir Abdur Rahman was captured in the land of the Yūz and then died in 1774, the land was ravaged in the following year by an army under Nadim. In 1784 the Shāhshāh Mirwāz 'Abd again attacked himself to Russia. In 1785, Russian power in these regions was strengthened by the creation of a Caucasian governorship. Afghanistan was only superficially affected by a religious movement under Shāikh Mahdī, provoked by the Turks in 1793-1794-1795; more of the rulers took up a hostile attitude to this movement.

When the Rajahs had succeeded in again bringing all the provinces of Burma into one kingdom, the Shan State lands were intended to be included

DAHLAK, the name of the principal island of the group of the same name in the Red Sea opposite Massawa. The origin of the word is uncertain: it is hardly possible to derive it from the name *Dahla* (Dahar) of this group mentioned by Arab geographers and in the *Periplus Maris Erythraei* or from the *Allana* which appears in the older maps. It is likely that the population is of Tigre origin and speaks this language. Islam was brought to Dahlak at quite an early period: it was used as a place of exile for prisoners under the Emperors of the post-Aksumite and the Medinet empires. Arabs were banished thither. This use of the island continued under the Abbassids, but Dahlak was lost to the caliphate when their rule ended and fell to the dynasty of the Fihriyas of Zetoul, whose viceroyalty it shared. This is with Abyssinia brought wealth to the country, but after the 12th century we find Arabic inscriptions here, the monuments of which have only been partly collected by Valentin Selt, Kappel and Mahomed. The island became independent after rules by whom Mahomed paid the title of "king"; these entered into relations with the Maurel rulers, probably to be the more easily able to resist the claims of the Yemen. Dahlak was annexed under the sultanate of Yemen again when Ahmad of Aden conquered and the Portuguese arrived in 1513. Ahmad, the prince then reigning, whose name is known to us from an epitaph, appeared to give them a friendly welcome but really intended treacherous designs. As a punishment the island was laid waste in 1520 and the inhabitants had left it. Peace was made to him; he was again allowed to gain possession of the island again on condition that he should renounce the Portuguese, which did not prevent him from attacking himself to Ahmad Gazi when the latter had become lord of the whole Eritrean kingdom and receiving the governorship of Dahlak. Ahmad, his successor followed his example and in the approach of a Portuguese fleet under Don Sebastian de Somo in 1541 had to flee with the entire population of the island. The further history of the island till the conquest of Yemen which he shared, by the expedition of the Emperor Paulus F. I. is unknown. In the period following Dahlak's history is that of Massawa, a port under Egyptian suzerainty and was finally ceded to Italy. The population is estimated at 1900 souls, the great libraries are almost abandoned.

Histor. Geogr., Inseln, *Progr. und Afri. Reise* (Strassburg 1889), p. 75—83; R. Hassel, *Les inscriptions de l'île de Dahlak* (Paris 1893); Bon, *Éléments de la géologie de l'Érythrée*, *Arch. d'Éthiop. Égypt.* (Paris 1897), II, 490 et seq. Note 1, where further authorities are given.

(Kurt Baumbach.)

DAHLAN, ARMAN R. ZAHN, was born in Massawa towards the beginning of the nineteenth century. From 1871 he held the office of Mufti of the Shafilites and Spanish al-Bahar there. When in 1881 the Grand Sharif Abu al-Bakr retired to Medina on account of the opposition of Othman Pasha, Dahlan accompanied him, but, as in the case of the Prophet, the fatigues of the journey proved too much for his strength, and he died there in the same year. He was not only a prolific author of works dealing with the religious sciences of the Muslims, but took an interest in the history of his time and issued satirical commentaries

on questions of his own day. Most of his works were published at Cairo at the end of the nineteenth and beginning of the twentieth century. A. H. 1275—1295, though some of them were composed at a much earlier date, e.g. a treatise on logic written at Medina in 1278 (1862 A. H.) and printed at Cairo about 1292. The following are the most important of his historical writings. *Umm al-Islam al-Diyar al-Islami al-Mashriqi*, (Cairo, 1306), in which, instead of following the usual chronological order, he takes up the events after another beginning with the Prophet and includes and lists Cairo down to his own time, with special reference to Arabia and Egypt. The *Umm al-Islam al-Mashriqi*, a history of the Muslims from the time of the Prophet to the end of the thirteenth century (Cairo 1305, Medina 1311), is partly a recapitulation of the history of the Arabs by al-Buhārī (written 1005 A. H., 1684 A. H.), but for the last two centuries it is original, and is one of the best known works of that period. It continues Wāstenfeld's *Character of Islam* (Cf. *Umm al-Islam*, *Umm al-Islam*, I, 2nd). The *Umm al-Islam*, composed in Mecca in 1278 and printed in Cairo in 1292, is generally known as the *Umm al-Islam* in distinction from the *Umm al-Islam*, in the margin of which it is printed. The *Umm al-Islam* is a political history of Islam printed at Mecca 3 years before the death of the author. *Umm al-Islam* (Cairo 1305) is one of the best compilations of the history of the first century, A. H., especially on the legacy of the first four caliphs.

Other works are the *Umm al-Islam* directed against the Wahabites (Cairo, 1299), a *Umm al-Islam* against Soliman ibn Abd al-Hamid, a *Umm al-Islam* living in Mecca (Hussein-Hussein, *Umm al-Islam*, II, 241 et seq.); *Umm al-Islam* on prayers for the Prophet, and by 'Abd al-Hamid and others (Cairo 1297). *Umm al-Islam*, an abridgement of *Umm al-Islam* al-Buhārī of al-Buhārī (Cairo 1298); a commentary on the *Umm al-Islam*; and other treatises on dogmatic, metaphysics and religion. *Umm al-Islam*: *Umm al-Islam* (Hussein-Hussein, *Umm al-Islam*, I, 2nd). *Umm al-Islam* in *Umm al-Islam* (Cairo, 1297, 5th Vol. II, 344—405 (also in Brockelmann, *Geschichte der Arab. Lit.*, II, 499); Van Dyke, *Umm al-Islam* (Cairo 1297) *Umm al-Islam* (Cairo, 1296) by Ibn al-Hamid.

DAHNA, "the Red" as called from the colour of its sands, the great desert of Arabia, known to geographers by the name *Rud al-Bahar* or "empty space". It stretches southward from the Arabian coast ("Bahrain") to the confines of Yemen and Afghanistan, and eastward from the Wadi Beker to Oman — an area said to be about 50,000 square miles. It is entirely desolate but for small clusters of bushes and stunted palms which appear at intervals. Great sand waves, intersected and broken by lower formations, cross its surface from north to south; at right angles, that is, to the path of the prevailing east winds. Owing to its tropical position and its general low level, this desert is said to endure terrific heat both by day and night. Not even do the Bedouins traverse its whole extent.

Umm al-Islam: *Umm al-Islam*, *Umm al-Islam*, [ed. Wāstenfeld, Doughty, *Travels in Arabia Deserta*; Palgrave, *A Year's Journey through Central and Eastern Arabia*. (A. S. FERGUSON.)

The name *Dair al-ʿAḥl* can hardly be explained, as has been done, from the Arabic as "monastery of the camel-thorn" (Arabic *ʿaḥl*, popularly *ʿajāl*) but more certainly like so many other pre-Islamic place-names in the *ḥaṣṣ* be of Aramaic origin. The Arabic *al-ʿAḥl* corresponds to the Syriac *ʿaḥlā* = "band", therefore the name means "the monastery at the bend of the river", and refers to a settlement which was founded at a place where the Euphrates takes a decided turn in any case. *ʿAḥlā* exists elsewhere as a place-name in Babylonia, as the name of a suburb of the Aral-town of Kāṣa (this word itself seems to be merely a translation of the Aramaic); that this name was given on account of a wall marked bend in the Euphrates, is expressly stated in Syriac sources. Cf. on this point, Noldeke in the *Monatsschrift der Wiss. Akad. d. Württemberg*, Vol. 128, Abh. 3a, p. 43. *Al-Lawḥ* "the winding", an epithet given to Baghdad or perhaps to be similarly explained (see above p. 563).

Dair al-ʿAḥl is famous in history for the decisive battle fought there in 628 = 676 between Yaʿqub b. ʿAlī al-Ḥafṣ and the army of the Caliph al-Muʿawwiḥ, led by the able general Muʿawwiyā, in which the rebellious governor *al-Muʿawwiyā* his first serious defeat and the great danger which threatened the Caliphate was averted. This battle of *ʿAḥl*, *Tabari*, II, 1893; *Marʿaṭi*, *Marʿaṭi al-Muʿadd* (ed. Paris), VIII, 41 et seq.; *Weil, Gesch. der Chalif.*, II, 443; *Müller, Der Islam im Morgen- und Abendlande*, I, 383; *Noldeke, Sketches from Eastern History* (1892), p. 199 et seq.

Topography: *Yāqūt, Muʿjam* (ed. Wartenfeldt), II, 676; *Marʿaṭi al-Muʿadd* (ed. Joyntall, *English. History*, 1850 et seq.), I, 435, p. 556; *Steck, Babylonien nach den Arab. Geograph.*, II, 289–293; *C. de Sacy*, in *Mon. Jour.*, of *Rev. Arch. Sci.*, 1835, p. 11; *ibid.*, *The Limits of the Eastern Caliphate* (1902), p. 35; *K. Ritter, Erdkunde*, I, 101, 321 et seq.; *Körner in Die Welt der Gegenwart*, I, 15 (cf. also p. 444).

DAIR AL-DJAMADJIM, a Christian monastery in Babylonia, 7 parasangs (c. 28 miles) from Kāṣa, according to *Yāqūt*, on the edge of the desert on the road to Hama. Near it was another monastery, called *Dair al-Kura*, which was identified with the al-Kura in *Ḥadīṣa* (cf. *Yāqūt*, II, 685; *ibid.*, 70). The distance between *Ḥadīṣa* and Kāṣa was 3 parasangs (30 miles); cf. H. Wagner in the *Arch. der Görting. Gesellsch. der Wiss.*, 1902, p. 257 et seq. From a story in the *Kitāb al-ʿAḥl* it may be deduced that *Dair al-Djamadjim* was near the bank of the Euphrates and apparently on its west side. According to these data, the site of this monastery should be sought for south of Kāṣa (the ruins of which are 6–8 miles east of Baghdad) *ʿAlī* = *Nadīṣa* somewhere in the southwestern part of modern *Dair al-Nadīṣa*, a swampy tract which has arisen on the bank of the former channel of the Euphrates.

Dair al-Djamadjim means "monastery of the skulls". There are various stories to the Arab authors of the origin of this name. *ʿAlī* are agreed that the name originated in skulls of men slain in a battle there, buried or piled up; but as to the actual event, which is placed in pre-Islamic times, and those who took part in it,

opinions differ. Sometimes it is said that the skulls in question belonged to members of the Hittite *Trojan*, who met their death here in a fatal feud, sometimes they are said to have belonged to Persians slain by the Lydians. A third tradition says that it was the Lydians and Hittites who were concerned; then bodies covered the bank in an encounter between the two tribes and were buried in the monastery. Whether the name really owes its origin to some such incident, may be doubted. It may more probably be derived from the skulls of martyrs and saints buried and venerated in the monastery. In any case the etymology name *al-Djamadjim* = "the skull", which is borne at the present day by a village at the south end of the ruins of Babylon, should be compared. There are two different views on the origin of this latter name; cf. on the one hand, J. C. Rich, *Colloques Monast.* (1830), p. 64; on the other Meisner in the *Archiv für Religionswissenschaft*, v. 232, and in the *Monatsschrift der Wiss. Akad. d. Württemberg*, (Berlin), IV, (1902), Abteil. II, p. 137, 6.

In Muhammadan history the "monastery of the skulls" is memorable for the battle fought in its neighbourhood in 62 (701) between al-Hudayl, the governor of *ʿAlī* al-Muʿawwiyā, and the rebel *ʿAlī* al-Rahmān b. Muḥammad b. al-Aḥlāṭh (q. v., p. 50). The former had his headquarters at the above-mentioned monastery of *Dair al-Kura*, while *ʿAlī* al-Rahmān occupied a strong position at *Dair al-Djamadjim*. The opposing armies skirmished with one another for more than three months. Although *ʿAlī* al-Rahmān's force was increased to over 100,000 by the addition of the troops from *ʿIrāq*, he had finally to quit the field, when the last, decisive battle was won for *Ḥudayl*'s Syrian troops by a powerful cavalry charge by *ʿAlī* al-Rahmān.

DAIR AL-DJATHALIK = monastery of the Catfish, a Christian monastery in Babylonia, at some distance from the west bank of the Tigris, in the area western by the canal. *ʿAlī* al-Dudhail *al-ḥal* off from the latter south of Samarra and runs parallel with it. The old building was built on a piece of high ground near al-Mashin, the capital of a district (*ḥaṣṣ*) in the province of *ʿArāḍ* al-*ʿAlī* al-Mashin is to be located about 9–10 parasangs (= c. 36–40 miles) its site is perhaps marked by the present ruins of *ʿAlī* al-Mashin.

Dair al-Djathalik owes its name to its history in the decisive battle fought in its immediate neighbourhood in 72 = 691, in which the Caliph *ʿAlī* al-Mashin defeated *ʿAlī* al-Mashin, the

line were Deraigh or Malabarhita, governed by the Vādava, and Warangal or Telingana, governed by the Nēlūya. The former were finally overthrown in 1328, and their kingdom annexed to India. The Muhammadan conquerors in the south were greatly extended by Muhammad b. Tagh-lah, but in 1347 his officers in the Dakhān, goaded to desperation by his tyranny, rebelled, and under Hasan Khān who, under the title of 'Ala' al-Dīn Bahman Shāh, founded the Bahmanī dynasty, established the independence of the Dakhān. The kingdom of Telingana was finally subdued by Ahmad I of this dynasty in 1424-1425. In 1490 the weakness of Bahman Shāh's descendants led to the disruption of their kingdom and between this year and 1525 the Dakhān was divided into the independent kingdoms of Bidjapur, Ahmadnagar, Golkonda, Berar, and Bidar, under the 'Adil Shāhi, Nizam Shāhi, Qutb Shāhi, 'Imād Shāhi, and Burhān Shāhi dynasties, founded by the provincial governors under the later Bahmanī kings. Berar was subsequently absorbed by Ahmadnagar. Bidar by Bidjapur, and in the reign of the Emperor Akbar the Dakhān was invaded by the imperial troops and Berar was annexed, but the further advances of the Moghals was long stayed by the ability and energy of Malik 'Ambar the African, who was nominally the minister of the later representatives of the Nizam Shāhi dynasty, and it was not until after his death that the dynasty was overthrown and the kingdom annexed by Shāh-Jahān's officers in 1633. The remaining kingdoms of Bidjapur and Golkonda continued, by intrigues with the Marāṭhas and by holding the corrupt imperial officers in the Dakhān, to maintain a precarious existence for another half century. Aurangzib captured Bidjapur in 1686 and Golkonda in 1687, and the whole of the Dakhān was incorporated in the Moghāl empire, but the authority of the imperial officers was not at naught by the rising power of the Marāṭhas, who established their independence in the western Dakhān and overran and looted black-mountain in the Moghāl dominions. In 1723 Kāshī Khān Nizam al-Daulah, who had been appointed viceroy of the Dakhān, defeated at Shikharphān in 1724 Mubarrā Khān, who had been appointed by the two Dalāyids then dominant in the north of India to supersede him, and re-established the virtual independence of his family in the Dakhān. In the eighteenth and the early part of the nineteenth centuries the eastern and southern districts of the Dakhān passed into the hands of the British, as a result of their wars and treaties with the French and the Marāṭhas, and in 1803 (first, the northernmost province of the Nizam's dominions, was leased in perpetuity to the Government of India, but the Nizam of Hyderabad still governs the greater part of the Dakhān.

Historical geography: T. W. Hail, *Historical Landmarks of the Deccan*. (T. W. Hail.)
DAKHANI, also-spelt **DAKANI**, **DAKANI** or **DAKANI**, the form of Hindustani spoken by the Muhammadan inhabitants of the Dakhān, or Southern India, more especially of the Hyderabad State. The language is that of Western Hindi, with an admixture of Persian and Arabic words, phrases and grammatical forms, introduced into it by the Moghāl conquerors, who formed a large accession to the Hindi population of this part of India. The structure of sentences also differs

from that of the modern and more polished style of Hindustani as spoken in Upper India. Thus we find the Persian translation *do* to express the plural number of Hindi names, whether denoting persons or things, as *do* 'people', *do* 'eyes'. The use of the Agent case (*me*), and the construction of the transitive verb — particularly characteristic of the polished style — is, as a rule, not observed in Dakhani.

Dakhani Hindustani was the language in which Urdu literature took its rise in the beginning of the 17th century, A. D. The early poets of the Dakhān were of the Shī'a creed, and their works — written in the Persian character — consisted chiefly of eulogies of popular Persian or Arabic theological treatises, stories of Muhammad, the Caliphs and saints, and adaptations or translations of popular romances or legendary stories. The earliest extant compositions of Dakhani poets are the *Shāhī Sāfī al-Mulūk*, and a translation of Muhammad 'Alī's Persian abridged version of the *Fāṭimā*, or 'Tales of a Parrot'. These two works were written by Ghawwāshī, a poet at the court of 'Adil Alī Khān Shāh Sultan of Golkonda in Hyderabad. The first is dated A. H. 1027 (A. D. 1618), the other A. H. 1039 (A. D. 1630). During the reign of the Nizam ruler Mir Nizām wrote, in A. H. 1060 (A. D. 1655-56), a romance called *Shāhī*, translated from the Persian *Shāhī*, and Naṣrullāh, the court poet of Bidjapur, wrote the romance of Prince Mandahat and Madhumatī, entitled *Gulshān-e-ḥāṭī* (A. H. 1068 = A. D. 1657-1658), and 'Alīshāh, a eulogist of his overlord 'Alī 'Adil Shāh II (A. H. 1071 = A. D. 1660-61). Several minor Dakhani poets, viz. 'Adil, Sewah, 'Adil, Ghulam 'Alī, Sayyid of Hyderabad, and others flourished about the same time. Shāh Wali of Ahmadnagar in Gujarat, the great Dakhani poet of the Dakhān, flourished in the 11th of the emperor 'Alaung II, in the beginning of the 18th century. The enjoyment of the position of being the first to compose in Urdu Dakhani in accordance with the Persian system is primarily, which form of poetical composition was universally adopted by the poets of Lucknow, Agra and other principal cities in the Moghāl kingdom.

(J. P. HUNTER.)
AL-DAKHIL, an epithet of 'Adil al-Rahmān b. of Cordova (q. v., p. 53).

DAKHIL, is a musical term applied to a vocalized consonant preceded by an *alif* (here called *alif al-dakhil*) and followed by a vowel or rhyming consonant (vocalized or quiescent). Thus, for example, in a verse which ends with *muḥarrirah*, *muḥarrirah* or *ḥarrirah*, the *Alif* (x) is the *alif al-dakhil* — the *Al* the *alif* and the *Kaf* (k) the *alif*. (Mott. Ben. Chazani.)

DAKHLA, is one of the southern groups of oases in the Libyan Desert (cf. article *DAKHLA*, p. 580). The oasis of Farafra, four days' journey to the north, is also sometimes included in it. The Dakhila is the present day (some part of the province of Agyū) the most important place in it is Siyā with about 1300 inhabitants. Little is definitely known about the history of the oasis; the accounts we find are mostly fabulous tales of mythical rulers and all sorts of marvels. Thus the lake is located there into which all birds which fly over it irresistibly fall; we are also told that whenever approached the gates of the town guarded by four idols of copper, fell as

once into a deep sleep from which he could only be awakened by being trodden upon by the inhabitants. According to the Waqf Shih, Minā v. Nūḥīr unsuccessfully attacked for seven days a fortified town, which had been built in ancient times to afford protection against the Saḥara. While al-Bakrī speaks of the great fertility and large population of the oasis, which was apparently at one end of a road to Ghazā which has been engulged by the desert since the 2^d century, Idrīs a few generations later describes its decay and desolation. There can be no doubt that much flourishing land has been covered by sand in occasional allusions show. Maḥṣūl points out, under *al-B*, that the sands which arose through the intermingling of the original population with Berbers were considered the cause of its decline. Al-Bakrī and al-Kalāmīn are the towns most frequently mentioned. The oasis now comprises 12 villages and has about 25,000 inhabitants.

DAKĪL, ALI MAḤMŪD MUḤAMMAD B. AḤMAD, a Persian poet belonging to 'Iṣā. He began an epic in the *maḥṣūl* more for the Sāmānī ruler Nūḥ II b. Maḥmūd and had completed 1000 couplets (covering the reign of Gushkasp and the preaching of Zoroaster), when he was murdered by a Turkish slave, his favourite, in 341 (952). These 1000 couplets were incorporated by Firūdūz in his *Shāhnāmā* (ed. Tārner, *Macan*, iii. 1005—1103, ed. Vahner, iii. 1495—1553). He also wrote lyrical poems of which a few fragments have been preserved by 'Aḥl al-Bayt, *Ḥawāṣī*, p. 11—13. It has been supposed from a verse in one of his poems that he was a Musulman; but it is more probable that what he really admired in Zoroastrianism was the liberty to drink wine.

DAKKA, a village in Nubia on the west bank of the Nile opposite the mouth of the Wādī al-'Aḥṣā (p. 310), famous for its gold mines. It was probably to its situation here that the ancient Per-sekai, called by the Greeks Perikhi, owed its importance; ruins of temples of the Hellenistic period still exist not far from Dakka. Cf. Doedeker, *Égypte*, p. 285 et seq.; E. A. W. Budge, *Égyptian Nubia*, l. 349; li. 120—114, 168, 297, 329 et seq.

DĀL, the eighth letter of the small Arabic Alphabet, and fourth of the Abjad (where its numerical value = 4). It was pronounced at the present day as *al* (cf. Arabic as a vocal dental explosive). Cf. A. Schaefer, *Schreibweise Lautlehre, Index*. (A. SCHAEFER.)

DALLĀL (a.) "broker, commission agent". *Dallāl*, literally "a finger-post", is the popular Arabic word for *commission agent*. The *Taḥṣīl al-'Arṣ* says in *ḥikma*: "This is the man whom the people call *dallāl*; he points the way for goods to the buyer and for prices to the seller". The Arabic notices of the occupation of *ḥikma*, which is of great importance in the history of commerce, and corresponded to the Byzantine *metretes*, are very scanty; as there are no systematic materials available, we can only give here a few *ḥikma* notes. In the law-books, the *ḥikma* are mentioned against trickeries used in trade (Ibn al-Qaṣṣā, *Kitāb al-Maḥṣūl*, iii. 75). They often command highly to the buyers goods which they know to be worth less than the price placed on them and, just as the modern *diagonian* still does, they made *ḥikma* came with the dealer against the buyer. Their occupation, which under certain conditions was of an official character, was called *dallāl*. Al-Wāḥidī appears quite early to name (*Taḥṣīl al-'Arṣ*), in the Fihrist period certain goods could only be sold through the intermediary of a *ḥikma* (*Maḥṣūl*, ed. de Goeje, *lib. Geogr. Arab.*, iii. 213, c.). In the Mamūlī period a car was laid on the *ḥikma*, commission (*ḥikma al-dallāl*) which had been used in Cairo from ancient times, by which the *dallāl* had to give up half of his profits, a tax which he naturally managed to make the public pay. This was called *ḥikma al-ḥikma* (*Maḥṣūl*, *ḥikma*, v. 80, c.). A somewhat similar arrangement existed in North Syria (cf. Sobrero in van Houten's *Corpus Inscriptionum Arabicarum*, li. N^o 55, and my review in *Der Islam*, l. 100). The most important transactions were made at the customs offices at the seaports. Here the *ḥikma* were also interpreters in commerce with the Franks. The relations of these *ḥikma* and the interpreters were minutely detailed in the treatise of commerce (*ḥikma*, *Diploma Arab.*, 104, 203). Heyd, *Levant-Handel*, l. 100, contains all the available information on these points. In the western Mediterranean cf. de Mer Lattre, *Traité de Droit et de Commerce* (Paris 1866), p. 189. The business of broking was then taken over by the new *al* *ḥikma*, *Handelsvermittlung der christlichen Völker des Mittelmeers*, p. 701).

It was not only in commerce with foreigners but among themselves also that *ḥikma* employed the *dallāl* but in this case he appears also as an independent dealer, e.g. in old *ḥikma* (*ḥikma*, *Égypte*, *Etat Moderne*, xviii. 2, p. 421). The auctioneer is the secondhand market is also called *dallāl*, a more frequently in the small broker and commission agent. His manner of business is well described by Lane in his *Manners and Customs of the Modern Egyptians*, li. 13. Women brokers (*ḥikma*) are also found who do business with the heterodox *ḥikma* (Lane, *op. cit.*, l. 200, 219, 242). For other meanings of the word see Wasy, *Supplément*, s. v. (C. H. HEART.)

DĀM (a.) "water-jar"; also the name of the commission agent, cf. al-Kawwāl, *ḥikma al-Maḥṣūl* (ed. Wartenfeld, l. 37).

DĀM is the name of an Indian copper coin. *Damya* and *damya* are diminutives applied to fractional parts of a *ḥikma*.

The first coinage of *ḥikma* was under Shih Shih and his successors of the Sāmī dynasty and it was continued by Akbar and his successors up to the fall of the dynasty. *ḥikma* is the popular name

in N. India for a small extent at the present day. Dāms were issued in great abundance by Sher Shāh and Akbar, and in smaller number afterwards, in fact so scarce were those of the later Moghals that they were unrepresented till lately in the principal European collections. During the past twenty years owing to the researches of C. J. Rodgers, Oliver Burn, Wright, White Klog and other anonymous specimens have come to light. Akbar's dams weigh from 303 to 327 grains (= from grammes 12.8364 to 12.8396) there being the lowest and highest recorded weights. There were also according to Abū'l-Faḡl half, quarter and 1/16 dams called respectively *ṣaḥḥā* or *niḥā*, *ḥaḥḥā* or *ḥaḥḥā*, and *ḥaḥḥā*. There was also a double dam, a specimen of which weighing 625 gr. is given by C. J. Rodgers (*Journal of the Asiatic Soc. of Bengal*, vol. 11, p. 22). On Akbar's currency the name dam does not appear, the coin being described simply as *ḥaḥḥā*. The names *ḥaḥḥā* and *ḥaḥḥā* however are found on some of the small coins. According to Abū'l-Faḡl 360 dams went to the *ḥaḥḥā* and 48 to the *ḥaḥḥā*.

(M. LAMBERT DĀMĀN.)

DĀMĀD, 102-10-10, law of the Sultān. Under the early Ghaznavid Sultāns, princesses (*niḥān*) of the royal house were occasionally given in marriage to the royal princes of the Minor, for example, the Ghaznavids, who were to the viziers and generals of the sovereign; the case of the sister Anar Sultān of Ghaznavid married a daughter of Ghaznavid I is quite unique not only for that but also for later periods. We afterwards find Girand Vizier, Kapudān Paḥlāw, Agha of Janakaria, Buzand Vizier and other high officials in the Sultān's household the best known are: Ghaznavid Paḥlāw, the favourite of Salḥān I, Rustam Paḥlāw (husband of Mīrīnān), Salḥān Mahamud Paḥlāw (husband of Esmaḥḥān), Ghaznavid Paḥlāw (husband of Mahamud III.) and Ghaznavid Paḥlāw under Alḥmad III. etc. (cf. v. Hammer, *Gesch. d. Osm. Reiches*, v. 607 et seq. *Sultān*). The name *dāmad* is applied to some of them by their contemporaries and in history, as well as the usual fashion (e.g. Dāmad Mahamud Paḥlāw, Dāmad Fāḥḥā Paḥlāw etc.). The marriage ceremonies were celebrated with great splendour and are minutely described in the native annals as well as by western travellers (cf. v. Hammer, *Gesch. d. Osm. Reiches*, cf. Vol. 10, Index v. *ḥaḥḥā* and *ḥaḥḥā*); the dowry had been fixed by Salḥān I at 100,000 *ḥaḥḥā* and the apparatus brought in 1000—1500 *ḥaḥḥā* daily. (Venetian Report of 1608 in the collection by Harari and Decker, p. 72; v. Hammer, *op. cit.* vol. 211); in addition a large palace was usually bestowed on the princesses. Till the time of Salḥān I. the *dāmad* were usually sent into the provinces as governors to prevent them having any personal influence on the affairs of the Sultanate Porte. (Kotik, ed. 1303, p. 94, 97). Kitānān compelled the *dāmad* to put away the wives he already had and to take no further wives (cf. the Venetian Report already quoted, p. 103 et seq. and v. Hammer,

op. cit., iv, 1033); he became the slave of his wife and this relationship finds expression in the forms of address used between the spouses (cf. the above reports, p. 72, 104; de la Motte, *Revue*, p. 338 et seq.; v. Hammer, *Osm. Staatshandb.*, I, 476—484; *Gesch. d. Osm. Reiches*, vol. 211—213; C. White, *Three Years in Constantinople*, iii, 180 et seq.). The statement that many of such marriages were done away with at birth (Edm. Survey of the Turkish Empire, 3, ed., p. 101; v. Hammer, *Gesch. d. Osm. Reiches*, iv, 463), may be disproved (cf. Djevdet, vi, 196 et seq., the Venetian Report I, c, p. 182, 372), only in earlier times they were debarred from all public offices (Venetian Report I, c, 181). (J. H. MONTAGNA.)

DĀMAQHĀN, a town in Persia, the capital of Kūla. There used to be works there for distributing among the villages the water rising in a cavern but these were destroyed by the Afghāns in 1238 (1723-1724). It is said to occupy the site of Hecatompylos, one of the capitals of the Parthians. It is on the boundary between Ḥāḥḥā and Kūla and is frequently mentioned in Firdaws's *Shāhnāma*.

A day's journey from it among the mountains are the ruins of the fortress of Ghaznavid, which used to be a stronghold of the *ḥaḥḥā*. In the northwest there is an important spring, called *Ḥaḥḥā*, around which Fāḥḥā Ḥaḥḥā built murworks in 1207 (1802) and which is an object of pilgrimage because it is believed that the mark of the shoe of the Prophet's horse may be seen on a stone over which the water falls.

Now it on the hill of Mahamud are the ruins of a fortress.

(C. L. ELIANT.)

DĀMĀN "security, bail", is an agreement by which a man pledges himself to the creditor (*ḥaḥḥā*) to pay the debt of a third person (*ḥaḥḥā*) if the latter does not do so. The guarantor (*ḥaḥḥā* or *ḥaḥḥā*) can only demand compensation from the debtor when he pays his debt if he becomes security for him with the latter's consent; otherwise he is considered a guarantor "for the sake of God". The latter is the case amongst others when a man becomes security for the debt of a *ḥaḥḥā* Muslim. — *Dāman* (in the books on *Fikḥ* further means responsibility for things, the law of or damage to which must be compensated to the creditor).

Bibliography: *op. cit.* Besides the chapters on *Dāman* in the collections of Tradition and *Fikḥ* books, *Ḥaḥḥā*, *Ḥaḥḥā* *al-Dīn* p. 111 et seq. *al-Dīn* (Pāḥḥā, 1300), p. 81.

(TH. W. JOURNAL.)

DĀMĀN, a Pers. word meaning "skirt" applied to the low lands lying along the base of a mountain range, fully written *dāman-shāh* "skirt of the mountains". This is especially used to designate a tract in the De radjst, now part of the Dera Ismaḥīl Khan District,

R. W. Frontier Province, India. The *Damian* is the high plain below the mountains, and does not include the low lands of the Indian known as *amāh* or *amāh*. The eastern part of this raised plain formerly called *Makhalā* is now included in the *Damian*. In the summer (over) further South (to the *Damā Ghāh* Khāh Dist.) the corresponding tract is also called *Damian* occasionally, but more usually *Pahāgh* or *Wāh*. The *Damian* is a level parched-up plain with little vegetation, intensely hot in summer, very dry with scanty rainfall. Irrigation from torrents is carried on by an elaborate system of embankments which catch the flow after rain and divert it on to the fields. In a few places there is irrigation from permanent hill streams (*khāh*), the chief of which are the *Takwā* near *Tāh*, the *Ghāh* (called the *Lūh* where it issues into the plains) and the *Vahāh*. The principal towns in the *Damian* are *Kāh*, *Drāhāh*, *Chāh* and *Tāh*. The population is mainly Afghan, speaking the southern dialect of *Pāh*, with numerous communities of *Dhā*, speaking *Lāhā*, especially in the east near *Tāh* known as the *Shāh*. There are also some *Māh*, and the *Kāh* an aboriginal tribe assimilated by Afghans as *Vahāh*. The principal Afghan tribes are the *Ghāh*, *Māh*, *Bāh*, *Ushāh* and *Kāh*. The *Pāh* or *Ushāh* traders enter this tract every year in the autumn by the *Ghāh* Pass and spread through the *Damian* where they camp and graze their camels while their traders wander through India. When the hot weather commences they return to the highlands of Afghanistan. These traders are mainly *Sāh* and *Kāh*.

Biography: [Tāh], *Settlement Report of the Indian District (Lahore)*; *Geographical D. I. (Lahore 1884)*.

(M. LONGWORTH DAMIAN.)

DAMANSUR, Coptic *DMANSHUR* "city of Horus", the name of a number of places in Egypt, mostly in the Delta of which only the most important are mentioned here.

The *Damansur al-Shah* or *Damansur Shahr*, mentioned by Yāqūt, l. 601, and placed by the *Dhā* in the suburbs of Cairo, deserves special mention on account of the Christian "Festival of the Mustyza", also frequented however by Muslims, observed on the 8th Pachon, in which the Christians used to throw a wooden box containing the finger of a saint into the Nile to hang about its rim, apparently a corruption of some ancient festival of Osiris and Horus. In 702 = 1302 the festival was forbidden, but in 732 = 1332 permission was again granted and in 155 = 1752 the relic itself was burned (see *Narrative of Events*, Vol. iv, p. viii—xi; *Majlis, Sultans Mamūn*, trad. Quatremère, II, 2, p. 213).

Majlis speaks of a *Damansur* in the *Kh*, 24 *Magir* *Kh*, which gives a clue to the Coptic texts to the locality of a *Damansur*, was certainly in the *Kh*, we would be inclined to regard the two places as the same and further to identify them with *Damansur Wahsh* (in *Qasr* *Kh*: *Damansur al-Wahsh*) which the later Arab geographers locate in the province of *Qasr*. This is unfortunately rendered accurate by the fact that at the present day there are two places bearing the name *Damansur* in *Qasr*.

The *Damansur al-Wahsh* of the Arab authors must not be confused with the above mentioned

Damansur Wahsh; the former (the ancient *Harpagopolis Parva*) is by far the best known of the places of this name. According to the later division into provinces which still exists, it was the capital of the province of *Khāh* (q. v., p. 772), was fortified in 792 (1392) by *Salḥ*, and lay on the western road, the so-called *Ḥāh al-Hāh* (see *Qasr* in *Majlis, Sultans Mamūn*, II, 2, p. 183), now on the railway from Cairo to Alexandria. This fine town, which forms the centre of a large system of railway lines, is of importance in the cotton trade and for its industries.

(R. HARTMANN.)

DAMASCUS, Arabic *DMASHQ*, *DMASHQ*, *DMASHQ*, also like Syria briefly called *DMASHQ*. The largest city in Syria, situated in 35° 18' N. Lat., 35° 28' E. Long. (Greenw.) and 53° 28' N. Lat., 5130 feet above sea-level on the edge of the Syro-Arabian desert, close behind the double mountain wall of *Lāhāh* and *Amīlāh* with *Hermon*. The spurs of these mountains (the *Amīlāh* is *Dhāh al-Hāh*) shelter the plain of Damascus to the north and south; in the south the *Dhāh al-Awad* and *Dhāh al-Māh* afford a certain amount of shelter but on the east it is quite exposed. The climate of Damascus, which has not yet been properly studied, cannot be identified as particularly healthy (east winds predominate; but there are also west winds bringing rain and cold and in spring occasionally the burning *Khāh*); great variation of temperature from 6° C. in the middle of January to 37° in the middle of July) but on the whole it compares advantageously with the country surrounding it on the east.

The importance of its site lies in the fact that the *Barāh* (q. v., p. 632) has been created an extensive oasis, the celebrated *Qasr* (q. v.) where it debouches from the *Amīlāh* into a country with a low rainfall (average estimated at 14 inches yearly) before its waters are finally lost farther to the west in the swamps of *Alāh*. This splendid district, a veritable garden, naturally forms a centre of civilization for the tract steppe-like hinterland. Owing to the incomparable fertility of its natural surroundings the town, lying on the north-south road through *Ignor* Syria, was able to attract the trade of North Syria and Mesopotamia, of Arabia and Babylonia with the Mediterranean and Egypt from the natural routes farther north and south respectively and to make itself the centre of this traffic.

With such a favorable situation Damascus has naturally been a centre of culture of the first rank from the very earliest times. The name (in the Thracian-Lat: *Damashq*, Assyrian *Dimashki*, *Tamashki*, Hebrew *דמשק*, later — as in Syria — with diminution of the double consonant — *דמשק*) is obviously pre-Semitic in the Old

Testament the name early appears in connection with the story of Abraham (Genesis, xiv. 15). This association was further extended by Tradition even at the present day, Muslims honour the Masjid Ibrahim in Herze north of Damascus (probably the *Abraham's altar* of Josephus) as the birthplace of Abraham. After the 2d century B.C. we find an Aramaean kingdom of Damascus, mentioned in the Old Testament and in Assyrian texts, which was destroyed by the Assyrians in 732 B.C. For the history of this kingdom as well as of the later kingdoms of Damascus under Assyro-Babylonian, Persian, Greek and Roman masters, the reader may be referred to J. Houshagar's article in *Damascus and its Environs*, *op. cit.* iv. 2042-2048 and the authorities there given. Here we are only concerned with Damascus in relation to the Arabs. About 85 B.C. the town passed for the first time under Nabataean rule (Arabs III. Philistines). The Nabataean kingdom owed its possession of Damascus for the second time to Rome (between 37 and 34 A.D., under Augustus IV. Philopator; cf. *Second Century B.C.*, xiv. 15). Arabic influences made itself strongly felt in an early period in the town which was too much exposed to the desert (Justin: *de expeditis* 98; *de vit. imp.*). This proximity towards the desert was probably also the reason why Damascus under Roman rule never became the capital of a province. According to the later division the province it belonged to Phoenice Libanensis, the political metropolis of which was Emesa (Hims). On the other hand the strongly Hellenized town was never directly subject to one of the Arab dynasties ruling in the neighbourhood, not even to the Ghassanids; yet the latter were the lords of the immediate neighbourhood (Labbid (q.v.) cf. Noldeke, *Chronik. Pflanz.*, p. 47) there was always a lively intercourse between the Hittites and their great market. They were acquainted with Damascus, looked upon it as the seat of earthly splendour and gazed with wonder and envious eyes upon the treasures of the town. It is therefore no wonder that at a later period the Muslim Arabs not only tolerated passage to the Koran like xvii. 2 and xxiii. 44, the more from *ahle al-islam* (Koran lxviii. 16) to Damascus but increased its glory by many sayings put into the mouth of the Prophet.

We have an accurate description of the Damascus of antiquity. Even Julian who praises the situation and buildings of the city in words of amazement, gives us no details. We can hardly be wrong however in supposing that the general plan of the town had been the same for centuries before as it was at the Arab invasion. The town had suffered considerably shortly before from the Persian invasion, but this was certainly not brought about any radical alteration in its configuration. Since the Muslim conquest the walls and external features of the town have been practically unchanged. This striking fact is largely due to the general situation of Damascus; for it lies at the point where the road through lower Syria from north to south crosses the Barada which runs from east to west. A regular arrangement of streets was thus formed. This feature was further emphasized by the gigantic temples of the ancient quadrangular temple (of the Sun) in which Theodoros or Apollonios built the Church of St. John. We must look upon the city as having existed in Roman times in its

present day form, as an elongated rectangle on the right (south) bank of the Barada, which was cut through by a road along its greatest length which is still called the "straight street", by foreigners its allusion to *Arde*, i.e. *Ar*. In the northern part lay the real centre of the town, the great vicinaria. The foundations of the church in the northwest corner probably also date from ancient times. We do not now know where to locate the synagogues founded by Isaacian. Even the divagates, which were there before the Arab conquest have in part survived to this day. Balidh (following Waghel's suggestion, in connection with the siege of Damascus, beginning with the Bab al-Sharqi at the east end of the main street, on the north side the Bab Tamm, the Bab al-Farabi, then the Bab al-Ghaziyah in the west at the end of the street running lengthways and the Bab al-Saghir and Bab al-Kabir in the south.

THE CONQUEST BY THE MUSLIMS.

After the battles of Hama and Fih in 634 A.D. (635) the Arab hosts advanced on Damascus along the Syrian road. They met with no resistance until they reached Marj al-Suffar north of al-Sanamin. The Byzantines were at first successful in surprising Muslim advance guard but were finally forced to fall back on Damascus (Muharram 14 = February 635). Fourteen days later the Arabs appeared before Damascus. Khalid b. al-Walid, the commander-in-chief, made his headquarters north or northeast of the city in Dar al-Salib or Dar al-Khalid (see Ibn al-Jaythami, quoted by de Goeje, *op. cit.* p. 94; the predominant tradition placed his camp at quite an early period farther east on the bank of Shaikh Asika, see Foster, i. 55 *Journ. Asiat.*, 1891 Ser. v. 403; vi. 449). It was necessary at all costs to prevent the union of the troops who had been driven back on Damascus with an army of relief which might come from the north; and this object was attained. The consequence was that in Rajab 14 = September 635, the inhabitants of the city (perhaps through the bishop, as Balidh reports, or al-Manfar the grandfather of Jobn of Damascus, as Enrichens says) secretly opened the eastern gate to Khalid's Muslims whereupon the Greek garrison retired to the north and the city passed under Muhammadan sway.

A wealth of irreconcilable traditions exists concerning the taking of the city. Only the most important can be mentioned here. The usual view, which has been disseminated in the east by Ibn Arabi and in the west by A. von Kremer, is that Khalid b. al-Walid conquered the eastern part of the town by force of arms from the Bab al-Sharqi, while the Bab al-Ghaziyah side of the town was surrendered to Abu Thabala. The two generals met in the ancient church of St. John and thus the eastern part of this building with the eastern part of the town came to be occupied by the Muslims, while the western remained to the Christians. The untenability of this late story which is in contradiction to all better older tradition has now long been recognised.

Balidh's account is more worthy of credence, according to which Abu Thabala seized the Bab al-Ghaziyah and was met by Khalid, who had entered by the east gate, which had either been surrendered or treacherously handed over to him, at the Makallat Church (cf. *Journ.*, *op. cit.* ix.

simple it may appear from Cestoni, *Damaski dell' Islam*, iii. 390 et seq. (but see also ibid., p. 349) and cf. Becker in *Islam*, ii. 197, the solution is by no means so easy.

The troubles which began with the Day of Hauran, led to the bloody battle on Moudj Rahib which secured the Caliphate for the Marwanid branch of the Umayyad house. With the decrease in the personal importance of the Caliph and the decline in their actual power, which marked the following period, there went hand in hand a gradually increasing necessity to make an external display of empire. It is therefore now that the most brilliant epoch for the Caliphate and the capital begins although in secret its decomposition had already set in. The city owes its greatest claim to fame, the Umayyad Mosque, to the Caliph al-Walid b. 'Abd al-Malik, the most important ruler among the Umayyads. The old mosque had only been a makshûr, the capital of the empire was at last to receive a place of worship worthy of it. The site on which it was to be built was already indicated. The centre of the town was still, as it had always been even in the days of Paganism and Christianity, the neighbourhood of the great temple. The first thing to do was to deprive the Christians of their church and build the new mosque on the site occupied by it and the old mosque, with the material still remained in the ruins of splendid ancient buildings. This was then done. In 86 (705), the Christians were forced to give up the church, this was partly destroyed and the new building, which was afterwards celebrated as the third wonder of the world, erected on its ruins. It used to be thought that the building was still practically unaltered and only the decoration was the work of Walid. Objections have recently (see in particular, Thierich, *Pharos*, p. 104 and 214) been rightly raised against this view. Careful examination of the building has actually shown that many particularly the colonnades and the transept cannot well be pre-Muhammadan (see Becker in the *Quarterly Statement of the Palestine Exploration Fund*, 1897, pp. 268—283). Walid's expenditure on the building was enormous. Hosts of workmen were brought from Constantinople particularly from the colonies. Papyri recently found show that materials and skilled workmen were brought from Egypt (see *Islam*, ii. 274, 374). Probably only very essential parts of the old walls were retained, but these, if Thierich is correct, need not have been the walls of the church itself, and the western and eastern towers no more. It is very doubtful, if, as appears probable from the Arabic sources, the whole of the old mosque was incorporated in the new edifice. Absolute certainty in detail may be obtained with good fortune by renewed expert examination on the spot with judicious utilization of Tradition. In any case al-Walid's work certainly was the building up of the present mass of buildings at the mosque into a whole, the erection of the northern minaret Mi (Kharab al-'Ara, used as a beacon tower, as we learn from 'Abi writers, the building of the Miṣṣalla with its beautiful mosaics in a form essentially the same as it has at present, as a building with three naves and a transept, above which rises the celebrated Kubbah al-Nayr (on this subject, see *Zeitschrift der Deutschen Morgenl. Ges.*, ix. 369, 702; *ibid.* 661). On the artistic importance

of the Mosque, cf. also H. Saladin, *Musée d'Art Musulman*, i. 80—87, von Berchem and Strzygowski, *Islam*, p. 316 et seq.

The later Caliphs did not do a great deal for Damascus. Several of the Marwanids transferred their capital to another place, while others spent at least a considerable part of the year in *ḥaḡira* (q. v., p. 557) in their palaces in the desert. Those of the splendid palaces in Damascus which might have served to preserve the glory of the Umayyads were sacrificed to the fury with which the 'Abbasids sought to extinguish the memory of their predecessors. At a later period there was a prison on the site of the Kharab. Only one other Umayyad palace may be particularly mentioned here as the great road to the southwestern suburb of al-Moḡira has its name to modern times, the Kharab al-Maḡlūḡ, called after al-Maḡlūḡ b. 'Abd al-Malik b. Marwan, which lay outside the Bab al-Saghir 288 Bab al-Maḡlūḡ (Yakub, iv. 110, according to which see Krenner's statement, *Topographie*, i. 14. Unsatisfactory; cf. *Journ. Asiat.*, 1871, Serier, vii. 579).

A. von Krenner, *Kulturgeschichte*, i. 174, has given a very attractive if perhaps somewhat too rosy picture of life in the city of the Caliph. Unfortunately we know very little about the life and rate of the Muhammadanizing of the city. But it is quite obvious that the number of Muslims settling in it immediately after the conquest must have been quickly much increased by immigration. Under the earlier Umayyads at least, religions did not however have an insurmountable barrier. We find Christians on terms of intimacy with the Caliphs and filling the highest offices. The family of the Byzantine emperor 281 Isaac, 282 played a part in the government of the city, and to which John of Damascus belonged, may be specially mentioned (see Cestoni, ii. 370; Louwen in the *Mittheilungen des Inst. Or.*, iii. 248 et seq.). There were the conditions requisite for the adjustment of relations between the two religions. How strongly Christianity had inspired Muslim theology just then developing, may be clearly seen from the writings of John of Damascus, which are in part clearly the outcome of discussions between Christians and Muslims (see Becker in *Zeitschr. für Kirchengesch.*, xvi. 175 et seq.).

The end of the Umayyad period with its civil dissension brought misfortune to the town. On several occasions in 122 (740) turbulent 'Iḡlāḡ set fire to it and laid various quarters to ashes (Tabari, ii. 484; Theophanes, 283 ch. 100, p. 412). In 126 Yazid b. al-Walid succeeded in gaining the capital of the Empire and therewith the Caliphate by a coup d'état, but this seems to have passed off without bloodshed. After Yazid's death Marwan II. (137—844) occupied Damascus without opposition, his opponent Sulaiman b. Thiqan taking to flight. But when the new Caliph moved the capital to Hauran, Syria rose against him. The rebellion was put down and, according to Theophanes, the walls of Damascus were razed as a punishment. It had played its part as capital of the Islamic Empire.

FROM 750 TO 1450.

Two years after Marwan appeared to have made his empire secure, it fell before the 'Abbasids. After a short siege, Damascus was taken by 'Abd Allah b. 'Ali, an uncle of the new Caliph.

Ugh, on the 10 Rabi'ul-hi 321 = 28th April 750. The 'Abbasids gave ruin to their hated and dishonoured the tombs of the Umayyads. According to the Arab historians it was now that the old walls of Damascus were destroyed. The new rulers resided in the 'Irak, and Damascus sunk to be the capital of a province. The western parts of the empire were often — not to their advantage — granted as a governorship to a prince or favourite in Baghdad who only sent his deputy to the province.

The notices of Damascus in the following period are too numerous. It is clear that the split between Kufa and Yemen in Syria which had been gradually increasing in the days of the Marwanids, continued (in 766 the Kharidist Mass was sent to Damascus and in 780 his brother Ishaq). The experimental years of the 'Aliphs did not of course restore the ancient glory of Damascus as the capital of the Arab empire and al-Mutawakkil's plan of again making Damascus the capital (794 = 858) never came after the 'Aliphs had made but a brief stay in the Syrian city.

The empire was rapidly approaching its dissolution. When in 854 (868) a strong personality in Ahmad b. Tulun became governor of Egypt, the independence of this province soon became an actual fact and in 874 (878) Syria with Damascus also passed into his hands. The Tulunid supremacy only lasted about a quarter of a century; this at last a brilliant period for Egypt hardly have been the same for the more exposed Syria, although we read of a palace al-Buhārī built for himself al-Mu'izz below al-Muraygha [i. e. p. 878] in the Nahr al-Hira: the palace in which he was assassinated in 904 (918) 322. The latter, ill-fated period of the Tulunids coincided with the ravages of the Karmanians who had been constantly appearing before the gates of Damascus since 389 (903) until they were routed by the forces of the 'Aliphs, which marked an end of Tulunid rule also.

A man of the Transoxanian dynasty of al-Buhārī, who had proved himself a brave officer, had been governor in Damascus under al-Mu'izz (Tughril b. Diqq. III. 100), the al-Buhārī al-Buhārī (322) (935) governor in Egypt, was devoted again to play the Tulunid drama in Egypt and Syria. The latter was always a dangerous and insecure possession. The al-Buhārī finally fell before a power which also disputed the religious title of the helpless al-Buhārī: the Shī'ī Fatimids had long been ready to pounce on Egypt. When the Karmanians were again ravaging Syria, al-Mu'izz saw his opportunity had arrived. Egypt fell in 358 = 999. Damascus fell at the same year, only to slip from his grasp almost immediately. The city was first taken by the Karmanians. Their domination was followed by a state of anarchy in which great parts of the city were destroyed by fire. Even at a later period the century of Fatimid rule does not seem to have been a happy one for Damascus, we read of frequent changes of governor, of risings, which are certainly not to be solely ascribed to the restless spirit of its inhabitants. One of these disturbances resulted in 401 (1008) in the burning of the Umayyad Mosque.

In 408 (1015) the Seljuq general Atabai seized Damascus. The town was for ever lost to the

Fatimids. The name of the 'Abbasid 'Aliphs again appeared in the *Amshur* in the output. Atabai is said to have built the citadel (*Yamun al-Diqq* 10th Series VII. 375; but the foundations at least are certainly older [see above p. 903]. The city lasted only a few years. In 421 (1029) he had to vacate the city in favour of the Seljuq prince Tughril (see his inscriptions in van Berchem, *Inscriptions de Syrie*, p. 18 et seq., 90 et seq., and in *Revue de l'Asie*, etc. *Asiatick*, etc. I. p. 149). After his death, the Amir Tughril's governor for his son Dushk, to whom are ascribed a hospital (*Yamun al-Diqq* 10th Series, III. 282) and a Khankah (III. 2, 282) and from whom the oldest nucleus in the city is said to date (III. 17, 266), still he finally became really an independent prince, after the death of Dushk in 479 (1084) and shortly afterwards his son also, and founded the Hurd dynasty (i. e. p. 300), which ruled Damascus for half a century.

The stormy period of the Frankish invasion was not without for architectural activity on a great scale (cf. however the collection of inscriptions of the dynasty made by van Berchem in *Revue de l'Asie*, p. 25 — 43). Tughril's statue the grandeur of the principal sanctuary in the city by recasting the supposed original codes of the Koran of al-Buhārī and bringing it to Damascus from Tabariya which was threatened by the Crusaders in 492 (1099). Tughril's successors showed themselves more and more unfit to cope with the dangers threatening them. Sometimes Damascus was being attacked by the Franks, (e. g. in 523 = 1129, and in 543 = 1148), sometimes the Turks were calling upon the Franks for help against Zengi (534 = 1139) and his son Nur al-Din (546 = 1151) of Hama until the latter finally succeeded in capturing the city in 549 = 1154.

THE DAMASCUS OF NUR AL-DIN AND SALAH AL-DIN.

The period of Nur al-Din opens a new era of prosperity for Damascus. The two reigns of Nur al-Din and Salah al-Din are the most brilliant in the history of Damascus, but its glory is different in character from that of the days of the Umayyads. The whole period was influenced by the religious wars. The first care therefore was for the fortification of the city and alongside of this for the cultivation of piety learning; the profane traditions of knowledge were not however entirely neglected; this is for example the period of the 'Asfhar, the great historian of Damascus. But gradually all the subjects cultivated became the dogmatic. The turmoil of the Crusades contributed largely to quicken the spirit of fanaticism. Damascus became the great bulwark of Islam.

Although the name of Damascus is inseparably associated for later ages with Salah al-Din and the glory of the city as his residence is celebrated even in contemporary western poets, it was really rather his predecessor Nur al-Din who gave the new Damascus its character. The defence of the city was improved by the renovation of the walls with their towers and gates. North of the citadel, in which he built a mosque, he opened a new gateway, the Bab al-Jarrah. Not far from it, according to van Kien, *Topographie*, i. 14, II. 14, probably on the site of the present military Serai, lay the Dar al-Hill (also called Dar al-Buhārī) of

Journ. As. Soc. Ser. vii. 246; *History of the City of Damascus*, p. 372) built by him and used as late as the Turkish period as the governor's palace. But by far the most famous were the buildings he erected for pious purposes, of which only the most important can be mentioned here: the oldest school devoted to the science of Theology, in which Ibn 'Asakir taught (cf. Goldziher, *Arab. Studien*, II. 186 et seq.) and the celebrated hospital, the *Madrasa of Nur al-Din*. In the *Madrasa* called *Nuriya* after him his tomb is still held in reverence.

With the death of Nur al-Din in 569 (1174) the greater part of his kingdom including Damascus fell to Salah al-Din b. Aiyub, who had already been reigning independently in Egypt. His brilliant victories brought Damascus triumphs previously unknown of; but although the architectural activity begun by Nur al-Din did not actually cease, the resources were left little energy for peaceful development. Six months after the conclusion of peace with Richard I. Count-de-Lion, Salah al-Din died on the 25th Safar 570 (6th March 1193) and was as first interred in the citadel, but a few years later his remains were removed to his final resting place in the *Madrasa al-'Arabiya*.

The fierce struggle between Salah al-Din's sons al-Ashraf [q. v. p. 245] and al-'Aziz [q. v. p. 340] and his brother al-'Adil [q. v. p. 137] in which the town had to suffer several sieges, brought great havoc on it. It was only after the death of al-'Aziz and the final defeat of al-Ashraf that Damascus began to enjoy peace again under al-'Adil (extension of the citadel, foundation of the *Iktaf al-'Adiliya*, cf. *Journ. Asiat.* 1^{re} Ser. vii. 237). Under his son and successor al-Mu'izz (1214) danger from the Franks again threatened a last period away. A few years later internecine wars again broke out in the house of Aiyub, which finally led to the alliance, so based on the Mardian population, of al-Salih Ismail of Damascus with the Christians against al-Salih Ayyub of Egypt, who with the help of the Byzantines defeated the allies at Hama in 643 = 1244 and again called Damascus to Egypt. After the death of al-Salih Ayyub's son al-Mu'izz al-Fakhri in 648 = 1250, al-Nadir Yaman, the ruler of Hama, seized the capital of northern Syria. He was the last Aiyubid prince of Damascus.

In spite of the turbulence of the period the architectural activity begun by Nur al-Din was not affected. Princes and princesses of the house of Aiyub as well as the nobles of the kingdom vied with one another in pious foundations. Damascus became a city of madrasas. Ibn al-Khatib, who visited the city in the time of Salah al-Din, counted about 20 madrasas, but the number soon became multiplied many times. These buildings however have more interest for the history of Islamism than for the history of the town proper. We will therefore here only refer the reader to Scarville's translations in the *Journ. Asiat.* 1^{re} Ser. iii-vii, with which may also be compared *Leitfaden der Damausk.* *Morgenl. Ges.* viii. 146-374.

THE MAMLUK PERIOD.

Soon after the middle of the 12th (12th) century the invasion of Hülai's Mongol hordes made an end of the Aiyubid kingdom of Damascus. In Rabi' I 638 = March 1200 the city, empty

of troops, opened its gates to the invaders; the only obstacle the latter met was a valiant resistance to the citadel. The victory of the Mamluks of Egypt at 'Ain Jalut [q. v. p. 213] made the latter masters of Syria. The Mamluks fled and the native Christians stood for the good reception they had given them by the destruction of the long famed Church of St. Mary (see Abu Sittina: *Rev. Hist. Crée.* 1^{re} v. 193).

In the following period, Damascus became the centre of the most important Mamluk province in Syria, the *Mamlakat Dimashq*, which practically included the whole of northern Syria from the Egyptian frontier up to Hama, Hama, Tadmur, al-Hama and the *Madrasas* (the *Madrasas* moved to Hama with the exception of the little *Madrasa* of al-'Adil and Salaf (for a period also *Madrasa* and *Madrasa*)).

Under al-Fakhri Ismail (q. v. p. 358), the great successor of the Mamluk kingdom, brighter days again dawned on the city. This indefatigable monarch often held his court in Damascus. He not only rebuilt the ruined walls and citadel but also built a new palace for himself on the Mardian al-Ashraf on the Mardian, the famous *Bayt al-Ashraf*, which is said to have served as a model for al-Nasir b. Kalim's palace above p. 324) building of the same name in Cairo, on the site of the modern *Takkiya* (see *Quartier de la Mamluk*, *Sultans Mamluks*, I. 2, p. 44; *Journ. Asiat.* 1^{re} Ser. vii. 253; Ibn al-Khatib, *Faraj al-Hafiz*, I. 203). Salaf died in 676 (1277) in Damascus and was buried in the *Madrasa al-Zahiriya* built by command of his son al-Said b. Ism' al-Din Aslam, governor of Damascus, northwest of the *Madrasa al-Mu'izz* (*Mamluks*, *Sultans Mamluks*, I. 2, p. 102; *Journ. Asiat.* 1^{re} Ser. vii. 420-421).

Salaf's reign had been for Damascus a worthy continuation of the prosperity it had enjoyed since Nur al-Din's accession were also steadily cultivated as evidence of which we need only recall the case of Nizami (q. v.). But under the later Mamluk Salaf's decline set in. Damascus remained untroubled as the second city in the empire and thus, the most important governorship, was naturally filled only by most distinguished Mamluks; but this occasionally resulted in a rivalry between the Salaf in Egypt and his office in Damascus. To prevent this, the commander of the citadel was appointed as the Sultan himself, independent of the government which naturally produced a constant strained relationship between these two officials. Immediately on the deposition of Salaf's son Salaf and the accession of Kalim, Salaf's son al-Ashraf (678 = 1279) rose in rebellion, supported by a *faraj* from the *Kadi* 'I-Khatib Ibn al-Khatib, but this rising was put down in the following year. During the confusion which followed the assassination of al-Ashraf Khalil, Sultan Kalim's was surrounded by troops devoted to Kalim in the citadel of Damascus and forced to surrender in 680 (1277). A fugitive *Kadi* from Damascus, al-Said, is said to have been the man who brought about the Mongol invasion's campaign in 699 (1300), to the extent of which Damascus suffered terrible devastation in the fight between the Mongols who occupied the Mongol and the Mamluks who stubbornly defended themselves in the citadel while the suburbs (like al-Salibiya [q. v.]) were utterly destroyed. The capture of the citadel levelled the whole neigh-

household from the Bab al-Nayr to the Bab al-Faraj, and the Mongols burned great sections of the city including the al-Mina's Dar al-Jadid. The Mongols soon retired Kipchak, who was left behind by Qubla as governor submitted to Sultan al-Nasir. Damascus escaped with only a fright from the Mongol invasion of the year 702 (1303). As regards the intellectual life of Damascus in this period, we may note the activity of Ibn Taimiya [p. v.], whose polemical works ultimately brought him into conflict with the government.

During al-Nasir's third reign, Tuglaq, the governor of Damascus, to whom the other Syrian Naibis were subordinate was for a quarter of a century (712-740 = 1312-1339) regent in Syria with practically unlimited power. In 717 he founded the Tughluliyah Mosque on the site of the present military buildings behind the military Serai (*Journ. asiat.*, Ser., vii, 237 *et seq.*), and in 739 a school for the study of the Koran and the Hadith (*Journ. asiat.*, ix^e Ser., iii, 284); he repaired the damaged northwest wall of the Umayyad Mosque and is also said to have widened the streets. While he was occupied in repairing the damage done in the city by a fire, he fell into disgrace and was finally shamefully put to death in prison at Alexandria.

A period of political protraction rule again followed the peaceful reigns of al-Nasir and Tuglaq, during which rival Amirs were struggling for the mastery. Damascus (753, 762, 790) also was the scene of these wars. In 792 (1389) the decisive battle between the all-powerful minister-Mutugh and the determined Sultan Barqak was fought before the gates of the city, by which the latter was back his throne. His son Faraj had to withdraw the town in 801 (1399). Under the youthful Sultan the rivalries of the Amirs again broke out, so that Syria fell in prey to Timur. In Hijri 805 = December 1402, his forces encamped before Damascus. When Faraj, owing to a rebellion in his camp, left the city and fled to Egypt, the result of the campaign was decided. The city surrendered but the Citadel continued to offer a stubborn resistance for a long time. Consequent to the terms of the capitulation Damascus was entirely given over to plunder and a fire in which numberless lives were lost laid the greater part of the town in ashes. The historian Johann Schödlberger, who long served as a slave in Timur's army, says that 30,000 men, women and children were shut up in the Umayyad Mosque which was then set on fire. It is certain at least that its sack by Timur was the heaviest blow this much damaged city had suffered for centuries.

The latter part of the reign of Faraj was again filled with anarchy by the rebellious Amirs whose operations chiefly centred around the ill-fated Damascus. During the whole of the last century of Mamluk rule these troubles were constantly recurring. The change of ruler in Cairo was usually the signal for the rebellion of the governor in Damascus. It is therefore no wonder that the town did not so rapidly recover from the devastation wrought by Timur. Sakschund (died 827 = 1418) says that only a part around the Mosque was rebuilt. In his time and the remainder of the city still lay in ashes (*Don. et. Saksch.*, p. 283). Nevertheless new schools and mosques were constantly being founded and the power of the Sultans was perpetuated in an

unbroken succession, which led to new buildings and restoration of ruined buildings, of pious endowments and royal proclamations. To this period Damascus owes buildings like the beautiful Sabuniya in the Maliki Road (*Journ. asiat.* ix^e Ser. iii, 216), the Umayyad Mosque northwest of the Citadel (ibid., p. 236, 431 *et seq.*). The western minaret of the Umayyad Mosque also dates in its present form from the time of Kait Bey; this part had been burned down in 824. The even the more energetic Mamluk rulers were no longer able to revive a real and permanent period of prosperity for the city.

THE TURKISH PERIOD

A few weeks after the defeat of the Mamluks at Dabik on the 25th Rabi'ul gas = 24th August 1516, Damascus opened its gates to the victorious Ottomans. Previously under the Mamluks of Egypt it had still been only the capital of a province but now it passed entirely under foreign rule. From this period the land enters to be the scene of the great events of history. It is hardly right to ascribe its decline solely to Turkish misrule, for its resources had already been exhausted by the wars of the preceding centuries. The Turkish period deserves a place of honour in the history of the architecture of Damascus, as some of the finest monuments of Muhammadan architecture in the modern city date from it. The Egyptian style had become very predominant under the Mamluks, but now Turkish influences began to make themselves felt. Sulaiman I. in 962 = 1554 built the Tekkiye before the western gates of the city on the site and from the ruins of the ancient Beit al-Abd; this beautiful building picturesquely situated on the Barada is built in the Turkish style (see *Journ. asiat.* ix^e Ser. vii, 253 *et seq.*; Schödl, *Monum. de l'Art Musulman*, I, 174). Only two of the most celebrated mosques in Damascus may be mentioned here which owe their origin to Turkish hands: both lie on the Maliki Road. The first is the Darwishiya begun by Darwish Pasha in 979 = 1571 (*Journ. asiat.* ix^e Ser. viii, 260) and the second the Sinantiya, so famed on account of its silence work, built by Sinan Pasha in 994 (1585) on the site of the ancient Masjid al-Nasir (*Journ. asiat.*, ix^e Ser. vii, 262), according to von Kienig, *Die Moscheen*, I, 48, the best in Damascus next to the Umayyad Mosque. In fact, architectural activity in Damascus never seems to have ceased, although we have but scanty sources in our disposal for its history in the last few centuries.

The re-enslaving of the East is associated with the appearance of Muhammad 'Ali. From 1832-1840, Damascus was in the hands of the Egyptians. Ibrahim Pasha strenuously set about restoring peace and order to the ruined country. Trade and industries began to flourish. Buildings for administrative and more particularly military purposes were erected, for which unfortunately however ancient and valuable edifices were often sacrificed. Thus, for example, the Tughluliyah was altered to form a military school and the Umayyad Mosque became a biscuit factory. The modern Military Sem. was built on the site of Nasir al-Din's al-'Adl. The enmity between Druses and Maronites in Lebanon, which had been gradually increasing during the Turco-Egyptian wars in the time of Bahir Shihab, led in 1860 to a terrible massacre of Christians in Damascus, in

which 'Abd al-Qādir [q. v.] who had been banished from Algeria placed the Christians greatly in his debt. In recent years no one mentions the brief period of government by the reformer Mīdhāt Pasha (1878); education was improved though the system soon in part broke down again; a permanent reform was the replacing of the old narrow bazaar alleys by broad streets. As had been the case innumerable times in earlier centuries, the development of the city has again in quite recent times been affected by great outbreaks of fire. In 1893 the Umayyad Mosque was burned down to its walls and in April 1912 considerable portions of the new houses perished in the flames.

The through commerce of Damascus was considerably affected by the opening of the Suez Canal. The railways, which since 1894 have connected the city with corn-producing (Hama), since 1895 with Beirut, and since 1905 with Haifa, have afforded a certain compensation, while the main line of the Hijāz railway does not yet seem to have produced any considerable effect on its economic prosperity. Although the continuation of the Syrian railway system will now and more completely ruin the economic trouble, yet a great development of the narrower hinterland may certainly be expected, which will probably assure the city permanent prosperity if it does not also bring it back its erstwhile predominance. According to the English *Consular Reports* the total trade of Damascus for 1909 and 1910 was roughly of the value £ 1,000,000 both for exports and imports.

Damascus which, as the capital of the Wilāyat of Syria with the four sanjaks, Hama, Hama, Hama, and Kark, is the seat of a Wilāyat and the headquarters of an army corps still, is credited to the last edition of *Reisener* (1912) with 300,000 inhabitants (exclusive of 5-4000 garrison) which is probably too high.

THE DEMOGRAPHY OF THE MODERN CITY.

As has already been pointed out, the ground-plan of the heart of the city has hardly altered in any essential features in spite of the numerous ravages of fire and sword since the Umayyad period. A sketch of the modern city will therefore be a supplement to the historical survey. That the eastern part of the city has practically not yet grown beyond the bounds of the walls is probably in a sense the result of the fact that the Christian and Jewish quarters are here; but the same is still more likely, that these quarters are here because the ruling Muslims preferred the western parts as they were situated on the banks to the more cultured touch of Syria. The city has exceeded its ancient boundaries. At quite an early period we read of the suburb of al-Ukhayr northwest of Hama. When, after the time of Nur al-Dīn, a new period of prosperity dawned, new suburbs grew up before the walls of al-Ukhayr expanding towards the Mайдан al-Akhdar (Dark Meadow) westwards and the Mайдан al-Bas (corresponding to the modern suburb of al-Bas) to the southeast. Gradually the old western boundary became the military and administrative centre, while the business activities of the native population continued to be concentrated as before in the quarter around the Umayyad Mosque. This evolution has been slowly but steadily going on from the time of Nur al-Dīn to the present day.

The great vein of traffic from east to west; the

"street which is called Straight" ends in the east of the city at the ancient Bab al-Sharq. From this point, the city wall, still well preserved, runs past the tomb of Shāikh Arāḍ (see *Journ. Asiat.*, 1887 Ser. v. 404) northwards as far as the Barāda, which it reaches at the Bab Tūmā. It then follows the southern of the two arms of the river, which here enclose an island, up to the Bab al-Salam (q.). Between the two last named gates there was once, according to the *Shikr* (*Journ. Asiat.*, 1887 Ser. vi. 373 et seq.) a gate Bab al-Ujayl, called after the quarter of the same name which forcibly reminds one of the ancient poetic name of Damascus, Ujayl. The traces of the remains of two walls may still be followed, although now built over in many places, westwards from the Bab al-Salam, between which runs the Bān al-Kuraym road up to the Bab al-Faraj, to which there was according to Porter, l. 33 a second gate farther inside and the Bab al-Amra outside across the Barāda. This gate takes its name from the suburb al-Amra which began at the Bab al-Salam and gradually disappearing by the incorporation of originally isolated quarters like al-Ujayl not far from the Mайдан al-Bas (see *Journ. Asiat.*, 1887 Ser. vi. 451), al-Hayy, etc. now sends out a thoroughfare to the northwest up to al-Salāma (cf. *Journ. Asiat.*, 1887 Ser. iv. 47) et seq. which had arisen at the foot of Hishm al-Sayyid before 800 A.D. The city wall must have been somewhere here linked up with the Citadel. The manifold alterations, one of which is witnessed to by Nur al-Dīn's erection of the Bab al-Faraj (on the site of an older Bab al-Amra, cf. *Journ. Asiat.*, 1887 Ser. vi. 374) probably owe their origin to the desire to protect the quarters which were gradually growing and becoming linked up to the city. But the city constantly expanded beyond the bounds drawn round it; and Porter and v. Kremer have not succeeded in definitely locating the course of the ancient walls in this part of the city. While the ancient Bab al-Ujayl was incorporated in the Citadel the course of al-Ujayl's extension in it, the ancient name was transferred to the gate formerly called Bab al-Sharq, a little farther to the south and has thus survived to the present day. The wall, however, can close along the east side of the Muḥallab road up to the Bab al-Ujayl, which corresponds to the west end of the great street running the whole length of the city, and without a doubt continued a considerable distance farther in the same direction, although all traces of it have now utterly disappeared, following the Bab al-Salam until it turned eastwards at the Bab al-Sharq. At the present day the suburb of al-Majdal with numerous beautiful mosques stretches for a mile or two southwards on this side, as far as Bawwān al-Aḥl, the starting point of the Hijāz route, not far from the Mайдан al-Kasab, where Tradition sought to locate the grave of Moses and footprints are pointed out which used (see Ibn Khayyān, ed. de Goeje, p. 281 et seq., Ibn Khayyān, l. 228 et seq.) to be said to be those of Moses and at a later period of Muhammad (cf. v. Kremer, *Topographie*, II. 22; *Zeitschr. d. Deutschen Palästina-Vereins*, vi. 285). It does not appear quite certain, although according to Vahdy, II. 236, very probable, that the ancient Bab al-Sharq is identical with the modern Bab al-Sharq, at which a double doorway is further evidence for the former existence

of a double ring of walls. Although the name *al-Saghat* for the gate has now disappeared, it is preserved in that of the most celebrated cemetery in Damascus, the *Maḥbarat* *al-Saghat*, where a number of contemporaries of the Prophet, and several of Muhammad as well as his daughter Fatima found their resting-place. The very memory of the tomb of Mu'awiyah which was once here utterly disappeared, while not far from the neighbouring *Lijmāt* *al-Ujayrī*, in which — probably owing to some misunderstanding — the grave of Abd 'Ullah is shown, the alleged tomb of 'Uṣaid l. remained as an object of veneration (von Karam, *Topographie*, II 20; cf. *Zeitschr. der Deutsch. Morgenl. Ges.*, xv. 360). From this point to the now closed *Bāb* *Kalān*, where legend locates the *ḥammām* *al-Aḥz*, i.e. 39, and thence to the *ḥammām* gate, the wall is still fairly well preserved with many towers but only as a single line of defence, although it has been once hostile here also, cf. Theopomp, *Suite du Voyage en Levant* (Paris 1673), p. 29 et seq. The alleged tomb of 'Ullāh l. *Bāb* *ḥ*, p. 719) and a Christian sanctuary of St. George, which is however also revered by Muslims, are situated in the gardens south of the city.

As the more important monuments of architecture in Damascus have already been mentioned above, a few general remarks on the interior of the city will suffice. As in all Oriental cities the usually tiled alleys of the quiet residential quarter with their black high walls, which often however enclose veritable palaces, form a striking contrast to the streets of the *ḥammām* always busy and full of colour, with their huge *khāṣṣ*, the officers and warehouses of Eastern merchants. The great advantage the town has over others is its inexhaustible supply of running water which the *ḥammām* supplies. It is no wonder then that the habits of *ḥammām* are often splendidly decorated with silken work, ranged in parallel rows. Weizsäcker gave a delightful picture of the picturesque scenes in the markets of the *ḥammām*, about the middle of last century in the *Zeitschr. der Deutsch. Morgenl. Ges.*, vi. 475—535. If this city has since lost some of its real Oriental character, it has nevertheless remained purer than in the other great cities of the *ḥammām* which have been more influenced by European cosmopolitanism. The old-established industries of Damascus have however declined considerably. The *ḥammām* *al-Aḥz*, which is usually traced back to the *ḥammām* founded by Holofernes, has been extinct since 1799 carried off those who followed it. The once world-famous silk-loom (cf. *ibid.* *op. cit.*) have, it is true, not entirely disappeared but they have quite lost their former importance. At the present day manufactured goods (particularly cotton-stuffs) hold first place among imported articles. On the other hand many craftsman still supply good and well made articles for native use. The leather work is particularly well known. The goldsmiths make pretty silver work while the wood and metal (copper, brass) inlaid work find a ready market in foreign countries also. Though the town has irredeemably lost its veritable importance as the capital of a great empire and a centre of the world's commerce, it by no means lives solely on its glorious past and we may well quote in M. von Oppenheim's verdict that "a town of prosperity is clearly demanding upon it".

Bibliographie: *Damaskus*, *Fathā* (ed. de Goije), p. 120—130; *Biblioth. Geogr. Arab.* (ed. de Goije), I. 39—83; II. 123—225; III. 126—160; v. 102 et seq.; vii. 325 et seq.; *Idrisi*, *Zeitachr. d. Deutsch. Morgenl. Ges.*, vii. 11 et seq., 130 et seq.; *Im* *ḥammām* (ed. de Goije), p. 260—298; *Voyage*, *Madag.*, II. 287—308; *Im* *ḥammām* (ed. Desfrenoy et Sangnier), I. 187—254; *Ḥammām* *ḥammām* (Constantinople 1845), p. 571 et seq.; G. La Sarras, *Palestine under the Moslems*, p. 225—273; H. Sauvage, *Description de Damas, la fontaine*, *etc.*, p. 231 et seq.—vii. Numerous works in manuscript specially devoted to Damascus, particularly the *ḥammām*, have unfortunately not yet been printed; but even the available sources have not yet been systematically utilized; indeed the topography of modern Damascus has not been thoroughly studied. The publication of the inscriptions of Damascus announced by van Dieckman will supply a new basis for investigation. A. v. Kremer's old, in many places erroneous *Topographie von Damascus*, I. II. *Damaskus*, *Phil.-Hist. Cl. der k. Akad. d. Wissensch.* (Wien, v. 11. (1854 et seq.) is still quite indispensable; cf. also Quatremère in Makrizi, *Souf. al-Aḥz*, I. 1, p. 262—283; A. v. Kremer, *Mittelalter und Islam* (Vienna 1853). For the conquest of the town by the Arabs cf. de Goije, *Memoire sur la Conquête de la Syrie*, p. 32—113; *Cartan*, *Annals dell' Islam*, III. 326—322. The older travellers have been utilized in *Islam*, *Erdbesch.*, vii. 133—140. See also more especially J. L. Porter, *Poor Feet in Damascus*, I. 24—248; H. Petersen, *Reisen im Orient*, I. 44—174; Lucet, *La Syrie d'aujourd'hui*, p. 567 et seq.; M. von Oppenheim, *Von Aleppo nach Pers. Golf*, I. 49—77; *Damaskus*, *Palestine und Syrien* (1912), pp. 298—322. (R. HARTMANN.)

DAMIETTA, a town in Egypt 12 miles north of the mouth of the eastern arm of the Nile. *Damiatta*, Arabic *Ḍamṣāṭ*, also popularly pronounced *Ḍamṣāṭ*, has at the present day (census of 1897) 31—32,000 inhabitants and is the capital of the government (*mudawana*) of the same name, which has 43—44,000 inhabitants. In spite of the railway, post and telegraph it is at the present day a medieval town and only holds the first place among Egyptian towns in regard to number of inhabitants. In the middle ages on the other hand *Damṣāṭ* was a flourishing industrial centre and an important seaport, the importance of which may be recognised from the fact that when it was besieged by the Crusaders in 1168 (1099) Malik Kamāl was ready to restore the kingdom of Jerusalem as it existed before Saladin's time to save *Damiatta*, an offer which was however refused by the Crusaders. When the period of *Damiatta*'s prosperity began, cannot be exactly determined. In Arabic sources it is called *Tamīn* or *Tamīn*, a name which it is said to have received from a son of the legendary eponym *Yūsuf* h. *Ḥamrān*. Nothing further of the pre-Islamic town is known.

The history of the conquest also, in which a relative of *Ḥamrān* plays an important part (*Ḥamrān*, *Ḍamṣāṭ* I. 213 et seq.) strikes one as even more legendary. *Al-Muḥadd* h. *al-Aḥz* is said to have been its conqueror. The account

situation of the town was responsible for the fact that Damietta, even after the final occupation of Egypt by the Arabs, was repeatedly the object of hostile attacks and suffered much from the Byzantines and afterwards from the Crusaders. The town was, for example, successfully attacked in 70 (708-709), 291 (735-739) and by the beginning of the third (tenth) century. An assault on it in the year 238 (852) induced the Caliph Ma'mun's government to fortify Damietta. After a century of peace the town was again disturbed by the Byzantines in 357 (967-968) and two centuries later devastated by the Normans of Sicily (950 = 1155). The fights for Damietta, best known in history, are however episodes of the Crusades. It was recognized by the Christians that the possession of the Holy Land could only be secure if Egypt, the great bulwark of Islam, were overthrown. It was with this end in view that the expeditions prosecuted so vigorously against Damietta were undertaken; the first of these was a joint attack by the Byzantines and the kingdom of Jerusalem upon Saladin who had just come into power (565 = 1169). The second expedition was ordered by Jean de Reims, King of Jerusalem, 603-618 = 1218-1221 against Malik 'Adil and after the latter's death against Malik 'Isma'il of Egypt. Damietta fell after fierce fighting but was soon afterwards retaken by Khalil.

An equally ill-fated attempt was made by Louis IX, on his Crusade in 647-648 = 1249-1250. These events took place just on the boundary of Egypt was passing from the Ayyubids to the Mamluks. To render such occurrences impossible in the future, Damietta was destroyed in 649 (1250) by the Mamluks. The whole town was razed to the ground except the mosque which alone was left standing. A new unfortified town arose farther to the south in 659 = 1260-1261, Bahari al-Khanakidat made the mouth of the Nile at Damietta impassable for ships. In the period of Damietta's prosperity the entrance had been barred by a chain. The new Damietta immediately supplanted the old town. The former Chief Mosque of Damietta, which dates from the period of the foundation of the town, the Djami' Abu T-Mahdi or Djami' Farah, still survives in a ruinous state lying to the north of the modern Damietta, as Salomon has demonstrated beyond all doubt. The site of the ancient Damietta is also thereby defined, a problem for which various solutions have been offered on historical grounds. It was not till the French period that Damietta again began to play a part in history. After Napoleon's return, Kitchener defeated a Turkish force which had landed here, on the 1st November 1799. The English afterwards occupied it and then returned it to Turkey.

While the modern Damietta has only a few unimportant industries (weaving of coarse linen, sugar-cane, and pottery) in the middle ages it was a centre for the export of the textiles manufactured there. The linens called *Dimas* (also *Shurb*, *Kash* etc.) were famed throughout the Mohammedan world. Only white cloths were manufactured in Damietta but in the neighbouring coloured cloths were also made (*Dimas*, *Al-Basim al-Basim* II. 604, 8). The admixture of gold thread was very popular and silk, which had to be imported, was applied in many ways. These industries were carried on by the state as

well as by private individuals. The work was done by free men (Christians) who were quartered in the factories and worked up a given amount of material allotted to them (cf. the article *Dimas*; for further information see I. H. Becker, *Seifurrahman Gharib al-Din*, II). This industry was at its zenith in the Ayyubid period. It did not survive the wars and tumults of the Ayyubid period and had perhaps disappeared or lost much of its importance even before Saladin's time, but we have no details on this point. At the present day only a few miserable remnants of the ancient industry remain. The location of the town was secured by the sinking of the Bahariyya canal (1816) which diverted trade to Alexandria.

Dimas, *Al-Basim al-Basim*, I. 604 et seq.; *Al-Basim*, *Al-Basim al-Basim*, I. 36 et seq.; Becker, *Seifurrahman*, p. 171-172. The remaining literature will be found in the important study by Georges Salmon, *Rapport sur une Mission à Damiette* (*Bulletin de l'Association Française d'Archéologie Orientale en Syrie*, n. 31-32 (1904), (I. H. Becker).

DAMIR, a technical term of Arabic grammar, the personal pronoun. The term *al-damir* or *al-damir* is really elliptic for *al-damir al-damir* or *al-damir* "the implied name" in opposition to *al-damir al-damir* or *al-damir*, the explicit name expressed by a substantive. It originally denoted not the personal pronoun itself but only the substantive represented by it (cf. Meisner, *Al-Basim al-Basim*, I. 167). Shammai therefore does not call the personal pronoun *damir* or *damir* but *al-damir al-damir* or *al-damir al-damir* (see for example, Desmoulin's edition, I. 188, and 329, etc.).

The personal pronouns are divided in the later Arabic Grammar, of which al-Kamdhahani's *Al-Basim* is the classic, into independent (*damir muftadil*) and dependent (*damir mutadil*). The former are the separate or independent pronouns *ana*, *anta*, *huwa* etc.; the latter include primarily the suffixed pronouns of all three cases (*fa'idah*, *fa'idah*, *fa'idah*) but also the merely virtually existing pronouns like the *ayon* in the form *fa'idah* etc. A pronoun of the latter class is called *mutadil* (invariable). In opposition to the *mutadil* which although dependent is actually elliptic (*fa'idah*). A variety of the *damir al-damir*, the invariable personal pronoun, is the *damir al-damir*, the inherent pronoun, which is however not as a rule expressed, as for example, the subject of the first and second persons of the verb.

In Shammai this terminology is not yet developed. He only distinguishes between an implication (*idghar*) which actually finds phonetic expression (either by a separate personal pronoun or by a suffix) and one which is not so expressed (cf. particularly I. 188, 1 and 2, and II. 315, 1, 320, 1 and 322, 1). But he already has expressions for the first, second, and third person (*al-mutadilim*, *al-mutadilim* and *al-mutadilim*) in place of the latter also *al-mutadilim* (*anhu*).

As regards *ayon*, the personal pronouns have given rise to a very subtle distinction among the Arabs, which touches on a theory of knowledge. Even Shammai (I. 188, 3) says that the personal pronouns are always determined, "because a name can only be implicitly referred to when one knows that it has been made clear to another whom or

and Romanis (i.e. بلاد روم, Asia Minor, in the narrower sense of the district of Armenia). He was succeeded in 537 (1142-1143) by his nephew Nizam al-Din Yaghutkhan (the *bayasur* of the Byzantines, Yaghli Arslan of the Arabs, and Vahak Arslan of the Armenians). According to Nikanor, p. 152, he ruled over Armenia and Angora and was brother-in-law of Kiliç Arslan II. of Rûm; another brother-in-law of the Seljuq Sultan ruled in Kalyatya and Swat, Dadidat, i.e. Tash al-Din Abu'l-Nasr b. Malik Muhammad, a nephew of Yaghutkhan. Yaghutkhan was in a way under the protection of the Emperor Manuel and was therefore constantly assisted by Kiliç Arslan (Kinnamos, p. 39 *et seq.*, year 1145). This did not prevent him from plundering Byzantine territory; in 1155 he fell upon Otracusa (Tracia) and Pampul (Paphlagonia) on the Black Sea; but this did not prevent him from sending a special embassy to greet the Emperor when the latter appeared with an army in Cilicia, an allying himself with him in 1158 against Arslan (Kinnamos, p. 176, 181, 200).

After the death of Yaghutkhan, who according to Haxarism died in 565 (1160-1161), Kiliç Arslan decided to dispossess the Danishmandids and drove Abu'l-Nasr out of his territory; the latter in vain tried to take Aramash with the help of Yaghutkhan's widow; on the other hand the Emperor Manuel claimed Yaghutkhan's estate on the ground that it was originally Byzantine territory. Ultimately Aramash fell to Kiliç Arslan while Nikanor surrendered to the Emperor (Kinn., p. 296 *et seq.*, 300). The disastrous war which Manuel then waged with Kiliç Arslan, and which ended in total defeat of the Byzantines, forced the Emperor to restore his conquests (Nikanor, p. 290 *et seq.*). According to Abu'l-Fazl, Abu'l-Nasr had died in the Emperor's hands, who was trying to restore him; he then turned with greater success to the Atabeg Nur al-Din of Damascus, who again protected him the possession of Bitlis for a period. Haxarism and Munawwirah mention a successor of Yaghutkhan:

1. Abu Muhammad Husam ibn al-Din, son of Yaghutkhan;

2. Malik Ibrahim, son of Muhammad, and nephew of Yaghutkhan;

3. Husam al-Dunya wa'l-Din Abu'l-Fazl ibn al-Din, son of Malik Ibrahim, died 564 A.H. (1168-1169);

4. Abu'l-Nasr, brother of Malik Ibrahim.

A note of Munawwirah is known which shows that he actually reigned, if only for a brief period; Abu'l-Nasr's sons are more numerous. After the death of Nur al-Din (May 1174) Kiliç Arslan finally made an end of the Danishmandid kingdom. According to Ya'qubi and the author of the *Nuḥḥat al-Furadik*, in von Hammer, *Gesch. der Osmanen*, i. p. 22, Kiliç Arslan had the last Danishmandid prince — probably therefore Abu'l-Nasr — put out of the way by poison and at the same time occupied Malazgirt, where another branch of the family ruled. The latter is as yet only known from coins and scattered allusions in Armenian sources. The following dynastic list may be compiled.

1. 'Ala al-Dawla, son of Husam (Malik ibn al-Din), died 1151;

2. Abu'l-Kasim, son of 'Ala al-Dawla;

3. Nizam al-Din Muhammad and

4. Fakhr al-Din Khatim, sons of Abu'l-Kasim, about 1170 or 1172.

Three sons of Yaghutkhan, Husam al-Din Mahmud and Fakhr al-Din ibn Parwana, and Husam al-Din Yusuf afterwards appear as *begs* (*begs*) in the service of Kal Kharazm I. ibn Parwana rose against Kal Kowda I. (*Recueil des textes rel. à l'histoire des Seljuks*, iii. and iv. fascim.) and an inscription of Mahmud of the year 602 A.H. (1205-1206) has survived (*Zeitschr. f. Assyriologie*, xxvii. p. 39 *et seq.*).

The chronology of the early Danishmandids is uncertain; the accounts of Western and Eastern authors are defective and often contradictory. The main sources are the occasional references in Byzantine authors (Asia Commens, Kinnamos, Nikanor, Choniates), the pertinent passages in Haxarism's *Ta'rikh al-Furadik*, Munawwirah (ii. 573 *et seq.*), Husam al-Din (iii. 573 *et seq.*), Husam al-Din (iii. 573 *et seq.*) and the very remarkable coins (especially No. 10 of the Danishmandid prince most fully treated in Ahmed Fawzi, *Monnaies arabiques, Medaillons persans, Seljuks, Fatimides* [Catalogue of Mus. Coislin in the Ottoman Mus.], v. No. 101-120). Monographs by A. H. Marquand sen. in the *Zeitschr. f. Deutsch. Morgenl. Ges.*, xii. 467-488 and P. Casanova to the *Revue Numismatique Française*, 1894.

(J. H. MARQUAND.)

DANIVAT. The prophet Daniel is not very often mentioned in Muhammadan literature. Tabari's *Chronicle* (see below) states that he was among the people taken prisoner to Jerusalem by Nebuchadnezzar; this king recognized his wisdom and appointed him his private secretary (cf. the Book of Daniel, i. 1-6); he afterwards converted Cyrus (cf. *Isap.* xiv. 42); the latter is said to have appointed him his minister; the prophet asked him for permission for the Israelites to return to Jerusalem and rebuild the city and temple; Cyrus granted the people's wish but retained Daniel at his side and the latter was only allowed to return to his native land on the death of the king. According to another tradition, the king sent him home with the Israelites as their leader.

The story of the Lion's Den and the prophecy of the kingdoms of the world (cf. *op. cit.* Chap. 14) are also found in Tabari's *Chronicle* but with considerable alterations.

We are further told that Daniel restored 1000 men to life, who had been dead 1000 years — a story which seems to be based on a misinterpretation of Chap. xii. of the Book of Daniel.

In his *Al-Bihar* (ii. 128) Mus'ad distinguishes two Daniels, a younger who lived at the time of the Bible and an older who appeared much earlier in the period between Noah and Abraham; the elder is credited with the prophecies concerning the kingdoms of the world; he is also said to have composed a book of prophecies, the *Al-Furadik*. According to Mus'ad (*op. cit.*, p. 118) there was a well close to the village of Habel, which was held to be that of the prophet Daniel; Christians and Jews visited it at certain festivals.

Al-Hariri repeats a story according to which this prophet obtained his wisdom from the *Treasure-Cave*; this is a cave in which Adam concealed the secrets of wisdom (*Chronology*, ed. Sachau, p. 300; on this idea cf. *Die Schutzbelle*, ed. and transl. by Bezant, Leipzig 1883-1888). The same author gives an account of a dispute between

Jews and Christians on the meaning of Chap. xii. 11, 12 of the Book of Daniel.

On the Tomb of Daniel in Sila, or Tassar, cf. *Revue des Études Juives*, *Ann. III*, 38 et seq. and *Revue Égyptologique*, ix. 430, and the Arabic authors cited there.

See also Theobald, *Die Araber* (Leipzig 1935), p. 225 et seq. (R. CAHILL in Vaux).

DAR (A.) "home", frequent in compounds in which the most important follow.

DAR AL-BEḌĀ (DARĀ), **CASABLANCA** (in Europe), a town on the Atlantic coast of Morocco, about 200 miles S. E. of Tangier and 400 N. W. of Mogador, in 33° 37' N. Lat. and 12° 15' W. Long. (Greenw.), with 30,000 inhabitants, including 4000–5000 Jews and 500–600 Europeans (Spaniards, French, English, German and Portuguese). The town is surrounded by walls crowned with towers and pierced by four gates. It is divided into three sections: the *Muslims* with houses built of stone in the Muslim style but with outer windows, traversed by broad irregular streets; the *Muslims* or Jewish quarter, the *Tachar*, a quarter of mud and clay built. Adjoining the *Tachar* is an extensive enclosure of recent origin which has not yet been built upon. There are no remarkable buildings, the great mosque, the only building of any importance, is by no means a work of art. The town is surrounded by a narrow strip of orchards of olives and fig-trees and vineyards with a few scattered country houses.

The largest section of the active population consists of Arabs and Arabized Berbers, natives of the surrounding country, who form a proletariat of labourers, porters, camel-drivers etc. The public offices are filled by Moors who come almost entirely from Fez, Marrakech and Tetuan. The Jews are artisans or merchants, as are the Europeans. The Muslims of Casablanca have a special reverence for Sidi Belkadd, whom they regard as the patron saint of the town. This saint, whose cult seems to have made particular progress in the second half of the sixteenth century, is said to have had the gift of omnipotence and of embodying wild animals. According to Doulet, *Afrique*, p. 13 (Paris 1905), his name is a corruption of the Mozarabic *Abū al-Layl* "the man with the lion". The water that falls into his Sabba is credited with the power of irresistibly bringing back to Casablanca any one who has left it. Casablanca is of considerable economic importance as a market for the district (incorrectly called *Sahara* by Europeans, the arable surface (*dar al-hack* "earth") of which is estimated at 1500 sq. miles and which contains a population of 700,000 natives. In 1905 its foreign trade totalled £1,191,600 in value or about 20% of the trade of the whole of Morocco. The harbour is the busiest in Morocco although it consists of a dock accessible only to small boats, while ships of large tonnage have to anchor in an open and unsheltered anchorage.

Casablanca occupies the site of Anfa, the *Anfa* of Maritima, a very flourishing place in the middle ages. Arab writers mention it as a harbour visited by merchant ships which came to get wheat and barley (Ibn al-Khatib, ed. de Goije, p. 34). According to Leo Africanus, Anfa was a rich and populous town, with beautiful buildings, traces of which were still to be seen in his time, where learning was held in great honour. In the sixteenth century A. D. its possession was disputed between the

Muslim princes of Fez and Marrakech, but Anfa seems to have succeeded in retaining its independence. The piratical raids of its inhabitants on the Spanish and Portuguese coasts however compelled them to attack from the Christians in retaliation. The Portuguese sent a fleet of 50 ships against Anfa in 1576. At the approach of this fleet, the people of Anfa, feeling unfit to offer any resistance, quitted the town and abandoned it to the Christians who entered without opposition and sacked it utterly.

The site of Anfa remained deserted till 1515, when the Portuguese laid the foundations of a settlement which they called Casablanca but had however soon to evacuate. It was not till the seventeenth century that Sultan Mulay Muhammad, anxious to develop Moroccan commerce, rebuilt the town which received the name of *dar al-bayt*, *dar al-bayt* where the Spaniards obtained the monopoly of the trade in cereals in 1789 and which had to sustain an attack from the natives of the surrounding country in 1790. Only at the beginning of the nineteenth century still only a wretched little town. It developed considerably in the reigns of Mulay Abd al-Rahman and his successors so that by the end of the sixteenth century it had become the most important centre of commerce in the whole empire. The enlargement of the harbour was deemed necessary and undertaken. The murder of several European workmen employed on the harbour works on the 30th July 1907 provoked the armed intervention of France. A body of soldiers occupied the town and restored peace in the *Sahara* country which had risen. The French occupation has resulted in a wonderful transformation of Casablanca as well as in a notable increase in the number of European residents.

DAR AL-DJHĀD. [See DAR AL-JAHĀD.]

DAR FUR or **DAR FUR**, a territory and Sultanate in the Eastern Sudan, is one of the still unopened areas in Central Africa, nominally belonging to the English sphere of influence and even paying tribute (at the annual *Exposition Egypt and the Sudan*) but still practically independent. Its boundaries can only be roughly defined as: to the north the 15° and to the south the 10° N. Lat., to the west the 22° and to the east the 27° E. Long. (Greenw.). Dar Fur is bounded on the west by the Sultanate of Wadai and under French influence, to the south and east by the provinces of Bahir el-Ghazal (q. v., p. 379) and Kordofan of the Anglo-Egyptian Sudan. To the north lies the Eastern Sudan, the ownership of which is still undefined. Its frontiers have frequently changed. At times great stretches of Wadai, Kordofan and even Bahir el-Ghazal have belonged to it and at other the role of the Sultan has been limited to the natural geographic centre, the Rajah Mera and the territories adjoining it. Since the end of the eighteenth century the capital has been at Fashaka. Nachtigal, to whom we owe all our real knowledge of the chief Dar Fur, estimated the population of the whole country at 3–4 millions, but this suffered great diminution in the horrors of the conquest by Abba Pasha

and in the time of the Mahdists. Dar Für is inhabited by negroes, immigrant Arabs and half-breeds. The five main elements of the population are distinguished by the letters *d*, *f*, *s*, *e*, *n*. These are according to Nachtigal whose orthography is practically retained here, 1.) the Därscho — called Tūdjū by Slatin Pasha and the geographers since 1881 — probably the old owners of the country, living in the south and south-west; 2.) the Tundschel (*Tundschel*, perhaps from *Tundschel*), of Arab origin but strongly mixed, said to have come 400 years ago from North Africa into the country, speaking Arabic and living in the centre of the kingdom at the eastern end of the Marra range and also in Waddi and Borei [q. v., p. 747 et seq.]; 3.) the Fōrwa, forming with the Därscho the great mass of the population, live principally in the Marra range and the S., S.W. and W.; they speak a language of their own; 4.) the Zoghwa are wholly or half-nomadic and live chiefly in the N.; 5.) the Nawa'ne, who are probably the earliest immigrant Arabs and are divided into numerous tribes, all of which profess to belong to the Ljahlala [q. v.] tribe. They are mostly cattleherds, Bakka [cf. the article *Bakka*, p. 561].

These elements, the Zoghwa have played a certain part in the north and east outside of Dar Für proper (*Die Sahara*, 3. 162 seq.), but in the history of the land itself they are not at all prominent. The course of the latter was first defined by the Därscho, then by the Tundschel and finally by the Fōrwa, who within the historical period gave Dar Für proper (the dwelling of the Fōrwa) the name still in use to this day. According to Nachtigal, ill. 360, the Därscho ruled the country for some centuries from the Marra mountains. They lost their power without a struggle to immigrant Arabs, the Tundschel. The first ruler of this line was called Ahmad al-Mögür. The name is explained by Slatin as *ahmā'ir* (the man with the red shew in his foot) and an etiological legend adduced in support. He seems a historical personage but his date cannot be located. The whole Tundschel period is still very uncertain. The last Tundschel ruler was overthrown by a relative, a descendant of Ahmad, who on his mother's side belonged to the Kēra, a branch of the Fōrwa. This, the first ruler of the Kēra dynasty, was called Dālī or Dālī Bahar and is one of the most popular of the kings of Dar Für, being particularly famous for the national system of laws which he is credited with introducing, the Book of Dālī, which unfortunately has not yet been studied by any European. The Book of Dālī forms the basis of the administrative and criminal law of later times. According to it, for example, the land was divided as follows. The country was divided into five provinces, the north province Dar-Tokanji, the middle province Därscho, the south-west province Dar-Kina (the east province Dar-Dālī and the west province Dar al-Ghach. Each province was divided into districts and many minor divisions, but this division has not survived in its entirety. The west province was the only one, which did not have a governor, but its three districts were ruled directly by the king. The centre of the Marra range had also a separate organisation of its own. The punishments indicated by the criminal code were exclusively money fines which, when money was not available,

were paid in kind, confiscation of property etc. It is highly improbable that this book originated at so early a period; for it may be presumed that the art of writing was not known till a later period. If the whole story is not actually fiction, the customary law must have been collected at a later period and ascribed to the legendary founder of the ruling dynasty. It is also possible that a king named Dālī was invented from the book bearing this name. Nachtigal and Slatin regard both individual and book as historical. Nachtigal places the Dālī of the legend in the middle of the 17th century. Some ten kings followed him, whose names are uncertain. The last of this line was overthrown by Salimān Solon, the son of an Arab woman. With him we enter on more historical ground, Islam, which had possibly already entered the land with the Tundschel but secured no strong foothold, now became the state religion; the borders of the flourishing kingdom, which became a real state, were extended far and wide across the Nile and farther to the Atbara. The most prominent ruler and the second founder of the kingdom was Salimān Solon's grandson Ahmad Bokhor, who was the first to make Dar Für a real Mohammedan state and by attracting foreign elements to a higher scale of civilisation sought to elevate the country. At this period a strong current of immigration set in from Borei [q. v., p. 747 et seq.] and Bagirmi [q. v., p. 570 et seq.]. Mosques and madrasas were built everywhere, firearms introduced and the government probably first organised on the lines which Nachtigal described at a later period. It is impossible to mention here the constant civil wars, the quarrels with Waddi and the struggles for the throne which Nachtigal has carefully described. Dar Für remained the great power in the Eastern Sudan till Muhammad 'All conquered the Sudan. The Sultan now sought to enter into negotiations with Constantinople and 'Abul al-Mas'ud and 'Abd al-'Aziz actually issued formal confirming them in their power. But circumstances were stronger than these friends. It has already been narrated. In the article *Bayn al-Jazā'ir* [q. v., p. 379], how the Egyptian government followed in the wake of the slave-traders. Ziber Pasha at the instigation of the Egyptian government advanced on Dar Für while Isma'il Pasha co-operated in the north. In autumn 1874, King Ibrahim (Ibrahim) fell in battle with Ziber at Manawid and soon afterwards al-Fayhū was sacked. The country was soon ruled from Khartoum but pretensions still held out in the more inaccessible parts. Both fell before Ziber Pasha and succeeding governments continued the war with him successively. A general rising, which Harar was able to stir up against the Egyptians, was quickly put down, and Gordon, the recently appointed Governor-General of the Sudan, was able to pacify the turbulent spirits of Dar Für also. He left Hassan Pasha Hilal there as Mufti who was succeeded by the Italian Messelagita and later by the Austrian Slatin.

While he was governor, the Mahdist rebellion broke out and Slatin had to surrender in 1883. Meanwhile Abdullahi Dūd Danga, a cousin of the Sultan Harar who had fallen in the war with the Egyptian government, had set himself up as a pretender in the Marra mountains. In 1885 he voluntarily betook himself to the Mahdī in Khartoum; when the Mahdī's kingdom collapsed, 'Alī

Islam succeeded in reviving the ancient Dar Fur kingdom. England has not again intervened in the domestic affairs of the land but it on diplomatic relations with 'All India and receives tribute from him regularly. With the advent of the Sudan railway Dar Fur is gradually being opened up to commerce. The land has recovered somewhat under 'All India's rule from the grievous damage done it by the constant wars and the ravages of the Mahdists. A list of the historical Sultans is given here; a very useful genealogical table is given in Helldorf's *Weltgeschichte*, III, 373.

1596—1637 Sulaiman Salim;

1637—1682 Mudd, son of the preceding;

1682—1722 Ahmad Bekkam, son of the preceding;

1722—1732 Muhammad Khura, son of the preceding;

1732—1739 Umar Lala (the Am), son of the preceding;

1739—1752 Abu 'l-Karim b. Ahmad Bekkam, uncle of the predecessor;

1752—1785 Muhammad 'Iraq, brother of his predecessor;

1785—1799 'Abd al-Hakim, brother of his predecessor;

1799—1839 Muhammad al-Faql, son of the preceding;

1839—1873 Muhammad al-Hakim, son of the preceding;

1873—1874 Ibrahim (Bashim), son of the preceding;

1874—1875 Bosh b. Muhammad al-Faql, uncle of his predecessor;

1875—1879 Harun al-Raghib, son of the preceding;

1880—1885 'Abdullah Imd Basha, cousin of the preceding;

1885— 'Ali Dinar, regnant.

It was ~~the~~ for instance that Nachtigal was able to visit Dar Fur just before the break-up of the ancient kingdom and to make a permanent record of the conditions then existing. The great collections of material that Elain made at a later period were destroyed by the Mahdists. Of special interest are his notes on the ceremonial peculiarities observed in the court with its hierarchy of officials. Immediately below the king (Abd Kari or Ali) ranked the king's mother who bore the title Abo and was the chief of the Alabys (plur. of Abo), the ~~the~~ mothers — widows or relatives of the royal house advanced in years — also played a certain part in the state religion. The Kamane (the king's cook), a kind of reflection of the king, (the king's shadow, as Nachtigal calls him, was hardly less important. He was an official, to whom all honour was shown as to the king himself, but he had no actual regal power. In ancient times he was put to death when the king died. This shadowy figure was of less actual importance than the Abu Shakh (the chief empuch and governor of the eastern province. He had charge of this province, had great influence on the transactions of the court and in earlier times was the real king-maker when a vacancy in the throne occurred. He was considered the guardian of the book of Allah, whence his name. He had also to keep a secret fire alight which was only extinguished on the death of a king. A second such fire was maintained in the royal palace. Fourth in rank was the Iya Hani, i. e. "the great

woman", almost always a sister of the king. She usually had the distinction of an official, appeared in public on horseback, and had great influence everywhere, almost more than the king's mother although the latter was superior to her in rank. These were only the highest members of the court to whom were attached numerous others.

We have already seen how much that is pre-Islamic has survived in Mohammedan Dar Fur, and the late appearance of Mohammedan influence in originally heathen ceremonies like the principal annual festival, the great drum festival, may be clearly recognized. It was originally merely a spring festival celebrated according to the solar year at which sacrifices were offered to former kings at their tombs. The ceremony became so influenced by Islam as to have passages from the Koran read at the tombs for the good of the souls of the Muslim kings along with these sacrifices. The Koran was not read at the tombs of heathen kings but sacrifices continued to be offered. To this was attached a typical spring rite. The king dug seven holes in which he placed seeds. These holes were then filled in by the seven Alabys, a further part of the ceremony, from which the whole took its name, was the slaughter of white cows and men with the skin of which the great royal drum *al-Manqara* and its "child" the little drum were covered. The king had to beat a skin of the slaughtered animal on his own skin drawn across the drum. The drum as a ritual religious symbol is also found among the Fulbe (described in *Mitteilungen der Geographischen Gesellschaft zu Hamburg*, xvi, (1913), p. 51 of 25.). The third part of the ceremony consisted in the partition of a sheep, of which a certain part with symbolic meaning was allotted to each official. The half decayed intestines of the animal had then to be devoured by the courtiers before the eyes of the warriors of the court. Whoever hesitated, was originally slain. The sheep at this peculiar meal is said to have been substituted for a virgin under the influence of Islam. Elsewhere we also find traces of a primitive cannibalism in Dar Fur. It is to be hoped that the future opening up of Dar Fur will add to the account of this interesting land by Nachtigal.

Itinerary: Gustav Nachtigal, *Salut und Schatten*, III (Leipzig 1889), 299 ff. etc.; Rudolf Stalla Pasha, *Fire and Sword in the Sudan* (transl. Wingate, London 1896), p. 36, 57, 218; Mohammed Ibn Omar al-Toumy, *Yazman Durfau*, und. par Perron (Paris 1895).

(C. H. HERZOG.)

(DAR AL-HARB. In Muslim constitutional law the world is divided into *Dar al-Harb* and *Dar al-Islam*. "Abode of Islam" is that which is already under Muslim rule; "Abode of war" is that which is not, but which, actually or potentially, is a seat of war for Muslims, until by conquest it is turned into "Abode of Islam". For an exception and disguised exception, see *Dar al-Sulh*. Thus to turn *Dar al-Harb* into *Dar al-Islam*, is the object of *Jihad* (q. v.), and, theoretically, the Muslim state is in a constant state of warfare with the non-Muslim world. But practically that is now impossible. The rulers of Islam are in a position to keep up a constant warfare *en masse*. Territories, too, once Muslim, are gradually coming under the rule of unbelievers. To meet this situation the early and logical position

has had to yield. Land once Abode of Islam does not become Abode of War, except on three conditions: (i.) That the legal decisions of unbelievers are regarded and those of Islam are not; (ii.) That the country immediately adjoins an Abode of War, or a Muslim country coming between; (iii.) That there is no longer protection for Muslims and their non-Muslim (dhimmi) (see *Dhimma*). Of these, the first is the most important, and some have even held that so long as a single legal decision (ḥukm) of Islam is observed and maintained, a country cannot become *dar al-harb*. The *Dictionary of Technical Terms*, (p. 465), having a regard for the situation in India, runs up: "This country is an abode of Islam and of Muslims although it belongs to the accursed ones and the authority externally belongs to these Sarras". Practically, of course, no religion under such circumstances would be legal unless it had a good prospect of success and were led by a Muslim sovereign. These conditions being fulfilled, withholding control of an Abode of Islam is an illegal abridgment. When a Muslim country does become a *dar al-harb*, it is the duty of all Muslims to withdraw from it, and a wife who refuses to accompany her husband in this, is *ipso facto* divorced.

Geographie: Juyaboli, *Handb. der Islamischen Geogr.*, p. 340; Snouck Hartogion, *Politique Musulmane de l'Inde*, p. 14 (= *Nederlandsch in de Indes*, p. 8); Hughes, *Dictionary of Islam*, p. 89 et seq.; W. W. Hunter, *Indian Musulmans*: the last two on the Indian situation. (D. H. MACDONALD.)

DĀR AL-ISLĀM. An Abode of Islam is a country where the ordinances of Islam are established and which is under the rule of a Muslim sovereign. Its inhabitants are Muslims and also non-Muslims who have submitted to Muslim control and who, under certain restrictions and without the possibility of full citizenship, are guaranteed their lives and property by the Muslim state (see *Dhimma*). They must belong to a People of Scripture (*ahl al-kitāb*) and may not be idolaters. See, also, *DĀR AL-HARB* and *DĀR AL-ḤAYĀ* and the bibliography there. (D. H. MACDONALD.)

DĀR AL-NAUWA was the name given to the public hall in an Arabian town, in which municipal, religious and other affairs of general importance were discussed, but the term is used *par excellence* for the town-house or *hôtel de ville* of Mecca. This building, which stood on the South-West side of the Ka'ba looking upon the Tawaf al-Sharif, was originally the dwelling-house of Kuryah, which he built for a palace about the year 440 A.D. It was called the Council House because in it Quraysh assembled to discuss public matters. In order to become a member of this assembly it was necessary to be not less than forty years of age. Here marriages were arranged, and maidens who had reached women's estate were for the first time clothed in the *dir*. Here, too, the leader of a military expedition received from the hands of Kuryah the flag or *ḥamīd*. The ceremony of tying the piece of white cloth upon the lance, which lasted till the end of the Arab empire, was called *ḥamīd al-ḥamīd* (Ibn al-Hishām, p. 80). Kuryah bequeathed his five privileges of *ḥajj*, *ḥajj*, *ḥajj*, *ḥajj* and *ḥajj* to his son 'Abd al-Lah, but on the death of the latter the sons of his brother 'Abd-Manāf attempted, on

the ground of their wealth and influence, to seize them. Quraysh became divided into two factions. To the end the faction of 'Abd-Manāf acquired the *ḥajj* and *ḥajj*, whilst that of 'Abd al-Nas retained the *ḥajj*, *ḥajj* and *ḥajj*. At the time when the first two *ḥajj* were held by 'Abd al-Muttalib, the other three were divided amongst different individuals, who were consequently of less importance than 'Abd al-Muttalib.

It was in the *dar al-naḥwa* that Quraysh assembled to decide the fate of Muḥammad immediately before the Hijra when Ḥishām obtained admission on their council (Ibn al-Hishām, p. 223 ff.). The building was still the same which had been the house of Kuryah. In front of it also Quraysh took their stand to watch Muḥammad and his companions make the circuit of the Ka'ba in the year 7 A.H. according to a tradition ascribed to al-Aḥbar (cf. *ibid.* p. 784).

Hittite Geography: Caussin de Perceval, *Asiat.*, I, 233 ff.; Tabart, I, 100ff. See also Lammuna, *La République musulmane de la Mecque* (Mull. Inst. Egypt., série v. t. 4, p. 73-74); Martmann, *Geogr. Zeitschr.*, für Afrikanologie, xvii, 43 ff. The latter thinks that *dar al-naḥwa* was a temple of Kuryah, the *dar al-naḥwa* of the clan of Kuryah.

(T. H. WILKINSON.)

DĀR AL-SALĀM, "Abode of Peace", is in the first place a name of Paradise in the Korān (vi. 127; x. 26), because, says Ḥafḥaf, it is a place of security (*amān*) from transgression and injury, or because God and the angels salute (*salām*) those who enter it. Hence it was given to the city of Baghdad by al-Manṣūr, alongside of *Madīnat al-Salām* (cf. *ibid.* *supra*, p. 563 above, and also in the geographical lexicon of Yāqūt, *ibid.*). As for the capital of German East Africa, see *ibid.*, p. 933.

(T. H. WILKINSON.)

DĀR AL-SINĀ'A, also *dar al-sinā'a* and *dar al-sinā'a*, the Arabic word for dockyard. The literal translation is "house of work". With no general meaning, it is natural that *dar al-sinā'a* was not only a dockyard but also simply workshop (e.g. of goldwork cf. *ibid.*, *supra*, p. 7). But the meaning *dar al-sinā'a* is by far the commonest and has passed into the Romance languages from the Arabic like so many other scientific and commercial terms. In Italian it appears as *darvina* and *darvina*, in Spanish as *darvina* and thence has passed into almost all European languages (Diefenbach and Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'arabe*, p. 205 et seq.). The dockyards were in the first place naval shipyards. In the earliest period of the Caliphate there appears to have been a *dar al-sinā'a* only in Egypt (Hafḥaf, *ibid.*, p. 117). In the year 49 (669), Mu'awiya built an arsenal at Akkū (Acre), which was transferred by the later Umayyads to Sū (Tyre). Even in the reign of 'Abd al-Malik, workshops were built by him in Tadmūr (Hama) and Engelman (L.). We are best informed on the arsenals of Egypt, in which Hafḥaf describes a comprehensive chapter in his *Asiat.*, II, 189 et seq. The Aphrodite papyrus gives valuable information on the Egyptian arsenals (cf. H. L. Hall, *Catalogue of Greek Papyri in the British Museum*, Vol. 10: *The Aphrodite Papyrus*, p. xxviii; C. H. Becker, in *Zeitschr. für Ägypt.*, ix, 84 et seq.). At a later period these were naturally similar arsenals at all

important pieces on the coast. The head of a *Dār al-Ḥanīn* was called *Mutamaddīn* (Munshir). The *Muḥammadī*, *Ḥanīnīn al-Ḥanīnīn*, p. 16, gives some account of the work done in one of these government dockyards. (C. H. H. H. H.)

DAR AL-SULḤ. Besides *Dār al-Ḥanīn* and *Dār al-Ḥanīn* [q. v.] were schools of common law recognize the existence of a third division, *Dār al-Sulḥ*, or *al-Sulḥ* (which is not under Muslim rule, yet is in a treaty relationship to *Dār al-Ḥanīn* — *Sulḥ*, "by agreement", being generally used to mean land as the opposite of *Ḥanīn* "by force"). The two historical examples of such a status, and the origin, apparently, of the whole conception, are Nubia and Nubia. With the Christian population of Nubia, *Muḥammad* himself entered on treaty relations, guaranteeing them safety and laying on them a certain tribute, regarded by some authorities as *Ḥanīn* [q. v.] and by others as *Dīyar* [q. v.] See on this whole story *Ḥanīnīn*, *Fatḥ* (ed. G. G. G.), p. 63 et seq.; Sprenger, *Ḥanīnīn*, iii, 304 et seq. In the course of events, and because of their position within Arabia, this provision for the people of Nubia amounted to very little. The case of Nubia was somewhat different by their work with the law the Nubians were able to hold off the Muslim attack and to maintain their independence for centuries. In consequence, *Abd. al-Muḥ* b. *Sulḥ* entered into treaty (Ḥanīn) with them, not requiring the head-tax (*Dīyar*) but only a certain tribute in slaves (Ḥanīn, p. 608). Others, however, evidently thinking the implication that there could be any territory in a status of neither Islam nor war, and therefore outside of Muslim conquest, maintained that this was not really a *Sulḥ* at all but only a truce (*Ḥudna*) and an arrangement for an exchange of commodities (*Ḥanīnīn*, *Fatḥ*, ed. G. G. G.), p. 215 et seq.; West, *Ḥanīn*, d. *Ḥanīn* i. p. 16, et seq.; Lane-Poole (following *Muḥammad*), *Ḥanīn*, p. 21 et seq.; *Ḥanīn*, *Ḥanīn*, from *Ḥanīn* and *Ḥanīn*, *Ḥanīn*, p. 207 et seq.) This conception in some vague form was probably also the basis on which treaty relations with Christian states were accepted as possible; the principle was by such states would then be regarded as *Ḥanīnīn*. [The conventional situation on the matter of this formally laid down by *Muḥammad*. All territories, under the control of Islam, in different degrees of directness, *Muḥammad* came, fall into three divisions: (i.) those taken by force of arms; (ii.) those taken without fighting after the right of their previous owners; (iii.) those taken by treaty (*Sulḥ*). The law divides again into two, according to the status of the land: (a.) those taken by the Muslim people as a *Ḥanīn*, or (b.) remains with the original owners. In the first case the original owners can remain in actual possession, becoming *Ḥanīnīn* [q. v.], and paying *Ḥanīn* and *Dīyar* and the land becoming *Dār al-Ḥanīn* [q. v.] In the second case, (b.), the terms of the treaty are that the owners retain their lands and pay a *Ḥanīn* from their produce; that this *Ḥanīn* is regarded as a *Dīyar* which falls away when they embrace Islam; that their country is neither *Dār al-Ḥanīn* nor *Dār al-Ḥanīn* [q. v.] but *Dār al-Ḥanīn* (otherwise called *Dār al-Ḥanīn*); and that their lands are absolutely their own to sell or pledge. When these pass to a Muslim, *Ḥanīn* can no longer be collected. This condition of the treaty holds as long as they observe the requirements of the treaty, and the *Dīyar* cannot be

collected from them as they are not in a *Dār al-Ḥanīn*. *Abd. al-Muḥ*, however, held that by the treaty their country had become a *Dār al-Ḥanīn* and they were *Ḥanīnīn* and should pay the *Dīyar*. As to what was the situation if they broke the treaty after entering into it, there was dispute between the schools. *Al-Ḥanīn* held that if their territory was then conquered, it came into the category (i. above) of territory taken by force; and if it was not conquered, it became a *Dār al-Ḥanīn*. *Abd. al-Muḥ*, however, held that if there was a Muslim in their territory, as if a Muslim country came between their territory and a *Dār al-Ḥanīn*, then their territory was a *Dār al-Ḥanīn* and they were *Ḥanīnīn* (*Ḥanīn*). If neither of these conditions held, then it was a *Dār al-Ḥanīn* in both cases (*Ḥanīn* *al-Ḥanīn*, ed. of *Ḥanīn* 1298, p. 131 et seq.). But that this situation was anomalous and ambiguous, appears clearly. *Muḥammad* himself, when reckoning the lands of Islam (*Ḥanīn al-Ḥanīn*), includes among them the *Dār al-Sulḥ* (pp. 150 and 151), and *Ḥanīnīn*, when dealing with the rules of *Ḥanīn*, makes no mention of this distinction.]

Etymology. References are given in the article. The subject has been little treated by western scholars. See, however, *Jayyab*, *Ḥanīn*, in *Enkhūlīn* *Gazette*, p. 340 and 341 and the northern *Ḥanīn* p. 344-345. Further: *Yahya* b. *Adam*, *Ḥanīn al-Ḥanīn* (ed. *Jayyab*), p. 35 et seq. (C. H. H. H. H.)

DAR (v. *Avenā* *Ḥanīn*) "door or gate", particularly the gate of a court or a royal palace. *Ḥanīn* (*Ḥanīn*, *Ḥanīn*) "door", properly "place of the door". *Dar al-Sulḥ* (formerly *Ḥanīn al-Sulḥ*) "gate of Islam", a name given in Constantinople. *Dar al-Sulḥ* (*Ḥanīn al-Sulḥ*) is the name given to *Ḥanīn* court ceremonies, receptions and morning audiences.

Etymology. *Ḥanīn*, *Ḥanīn* of *Ḥanīn* *Ḥanīn*, in 114, note 1. (C. H. H. H.)

DAR-Ā ḤANĪN is *Ḥanīn* *Ḥanīn*, *Ḥanīn*, *Ḥanīn* *Ḥanīn*, *Ḥanīn* *Ḥanīn*, *Ḥanīn* *Ḥanīn*, *Ḥanīn* *Ḥanīn* — "Iron Gate" — a frequently recurring name in the *Muḥammadīn* world for important passes and ravines. The best known is the ravine, about 2 miles long and only 12-20 yards broad, in the *Ḥanīn*-law range, through which runs the main road from *Ḥanīn* and *Ḥanīn* to *Ḥanīn*. This ravine is first mentioned under its Persian name by *Yāqūt* (ed. de Goeje, p. 290, 1); *Yāqūt*'s statement that a "iron" bore this name is not confirmed by any other authority. The name "Iron Gate" certainly dates from pre-*Muḥammadīn* times and was known to the Chinese pilgrim *Hsien-Tsang* (*Ḥanīn* *Ḥanīn* *Ḥanīn* *Ḥanīn*, and *Ḥanīn* *Ḥanīn*, p. 23). To the west of this ravine began the highlands on the upper course of the *Ḥanīn* composed by the Arabs under the name *Talḥarīn* (C. H. H. H.), where *Ḥanīn* still reigned supreme as late as the mid-century A. H. In opposition to the district of *Ḥanīn* and *Ḥanīn*. In later times also the "Iron Gate" was always regarded as the natural boundary between *Ḥanīn* proper and the land dependent on *Ḥanīn* on both sides of the *Ḥanīn*.

Besides the "Iron Gate" there are other routes across the *Ḥanīn*-law, which were known even in the fifth (A. H.) century; one of these routes

is described by the Chinese pilgrim Chang-tsun (c. 630) here in the autumn of 623 (E. Bretschneider, *Medieval Researches* etc., I. 421; but this does not seem to have affected the strategic or commercial importance of the ravine. In the descriptions of the campaigns that have affected these districts, the "Iron Gate" is almost always mentioned; in the 17th (18th) century the ruler of Cashghariya [q. v., p. 811] sent a caravan here by the Samarkand Nāh, Kay (Goudet in W. Barthold, *Turkistan* etc., I. 9). All caravans bearing goods from India via Balkh to Samarkand and Kashghar passed through the "Iron Gate": a day's journey to the north of the ravine, at Kandah, the road to Nāghānab (Nāst among the Arabs, the modern Kesh) and Bukhārā separated from the road to Kesh (Kash among the Arabs, the modern Shahr-i Sabz) and Samarkand. As is clear from Chavjo (ed. Sernowick, p. 231) there was still a customs house here in 1404 from which Timur drew a large revenue. Until 1875 (Chavjo was, as far as is known, the only European who had ever passed through the "Iron Gate"). The name is sometimes mentioned by Shihab al-Din Yaqut (*Shihab al-Din*, ind. ed., I. 49 etc.) and by Ibn al-Bihar (*Shihab al-Din*, ed. Beveridge, I. 124) by the Mongol name Kialgha (this is the form in which it is written in the Arabic script; at the present day it is pronounced Kialgha as Kialgha among the Mongols, whence the name of the town Kialgha) "gate" (the word is not Turkish as supposed by Le Strange, *The Lands of the Eastern Caliphate*, p. 441). The name Burghala-Shāh ("house of the channel") (which was found in use by the first Russian travellers to reach there (in 1875) is first mentioned by Muhammad Wafā Karimnaghi (*Tafsi al-Kāsh*, MS. in the Asiatic Museum, c. 381), I. 184, in the description of a campaign by Muhammad Kabir Shāh in 171 (1757).

At the present day the Russian post-road from Samarkand to Tashkent (Tashkent) runs through the "Iron Gate". The road is not now of the slightest strategic or commercial importance; the "Iron Gate" is therefore only regarded by modern travellers as a remarkable natural feature of importance for the study of the geological conditions of the neighbourhood; no traces of medieval buildings have survived here. The view of the ravine in Reclus (*Nouvelle Géographie Universelle*, vi. 303) is a reproduction of a drawing made in 1879 by the Russian painter Kozlov; the same view is given in Muthetow's *Turkistan*, I. 355. (W. Hartmann).

DARĀ, Arabic form of the name Dārāya-wahsh as Dārāya; the form Dārāya is also found as well as the Persian forms Dārāb and Dārā. Muhammadan authors distinguish two Dārās: Dārā the elder, son of Balun, son of Isfandiyār, and Dārā the younger, son of Dārā the elder.

Dārā the elder, as the Magest religion allowed, married his two daughters Hamdā or Hamāya but did not stop afterwards leaving her an heiress; she began to reign but when the child was born, fearing that he would be placed on the throne to her sister she placed him in a box on the river of Balkh (Delkha). A miller found and brought up the boy whom he called Dārā. When he was twenty years of age, Hamdā recognised him and gave him the crown. After his mother's death he left Balkh and went to reside in Persia; there

he founded the city of Dārāb and afterwards lived in Babylon; his reign was twelve years long.

His son Dārā is the Dārā who was defeated and put to death by Alexander after reigning forty years. Philip of Macedonia paid tribute to him as he had done to his father; but when on the death of Philip, Darius sent to demand the tribute from Alexander, the latter refused, saying: "I have slain and eaten the goose with the golden eggs". According to Strabo, *Strabo ad-Geographia*, (Libri de Administratione transl. Carré de Vaux, p. 217), it was Aristotle who advised Alexander to go to war with Darius. Alexander killed two of Darius's chamberlains, who mortally wounded him on the battle field; seeing that he was dying, Alexander went up to him and revealed his last wishes; he then married his daughter. The two chamberlains are called Bessus and Aristomenes in the Greek *Romanes of Alexander* and Bessus and Nabarzanes in history. The Persian translation of the history of Dārā is from the Greek romance (Fahst's *Chronicle*, transl. Zoroastrian; Nöldeke, *Uebersicht der Perser und Araber zur Zeit der Sassaniden*, p. 5).

Dārā the younger had built a fire-temple at Sābur in Fārs (according to Mas'udi, *Les Princes* etc., I. 285). The date of his death is a starting point for the compilation of historical epochs; he is regarded as the ancestor of the Sassanids.

Dārā's son reserves two long chapters in the two Dārās. He reserves the form Dārāb for the elder, the son of Hamdā, and attributes to him the foundation of the town of Dārābād [q. v.] and of the fire-temple there. Dārāb had married a daughter of the king of Rome (Philip of Macedonia) named Nāhā, and had sent her back to her father, so-called with Alexander. Alexander would thus be the elder brother of Dārāb the younger (Shihab al-Din, *Uebersicht der Perser*, transl. by Julius Mohl, Vol. v. Chap. xviii, ix.).

Dārāb or Dārāb-Aminogard is a fortified town between Mardin and Nisibis, which was taken from the Greeks by Khosrow (Chosroes) I. Ansharshah in the campaign of 540 (Nöldeke, *op. cit.*, p. 230). — Dārāb Tāhā is in Afghanistan.

(H. Carré de Vaux.)

DARĀ SHIKŪH, eldest son of Shāh Jahān. His mother was Arghamand Bānū Mominā Mahal, and he was born at Agra on the 20th March 1615. In 1633 he was married to his cousin Nāhida Begam the daughter of Prince Farwāz, and granddaughter of Jahāngir. By her he had one daughter, Dīnā Begam or Dīnā Zeh Bānū, and two sons: Shikūh Shikūh and Siphir Shikūh. Dārā, says Elyashah, was a frank and high-spirited prince, dignified in his manners, generous in his expense, liberal in his opinions, open to his enemies, but impatient, impatient of opposition, and despising the ordinary rules of prudence as signs of weakness and artifice. In most of these characteristics he was the opposite of his younger brother Aurangzeb whom he used to speak of as the *Nawab* "the pragmatist". He had the inquiring spirit of his great-grandfather Akbar, and was much interested in Shī'ism and other religious questions. But he had not his ancestor's military skill or daring, and he was unfortunate in all his undertakings. He was thus no match for Aurangzeb. Somehow, he seems to me to resemble Charles II of England. He was like him in uxoriousness, attachment to reli-

poor, literary tastes and haughty temper. He resembled him too in his fate. In 1653 he made a long and fruitless attempt to take Kandahar. In 1657 when his father fell ill, he practically governed the empire. But his younger brothers could not endure his predominance, and he was twice defeated by Awrangzeb, once near Agra, in June 1658, and again at Ajmir in March 1659. He was betrayed and seized by the Afghan Mohib Ujjaz the chief of Dadar (q.v. the Dadr of the Imperial Gazetteer) and brought to Delhi where he was put to death by order of Awrangzeb in the end of August 1659. He was the author of several books which are noticed in *Rien Catalogue of Persian Mss.* The best known is the *Safwan Asāyish* or 'Ship of Safety', a series of short biographies of Muhammadan saints. It has been lithographed at Lucknow and there is a very full table of its contents in *Ethn. Catalogue of the Persian Mss. of the India Office*, No. 647, pp. 274-316. There is much about Isfāh in Bernier and Manucci, both of whom were personally acquainted with him. (H. BAYENBROOK.)

DARĀBJIRD, a town and district in FARS; the principal places in the district are Fard and Fard-Nāshir. The town which is surrounded by a wall and by suburbs had four gates and a rocky dome-shaped mass in the centre. In the neighbourhood, bitumen (wadīyā) was collected in a sand closed with 20 iron doors and opened once a year in June, at the presence of the authorities of the town; the pure bitumen was kept in the royal treasury (Vahā). Industry was in a flourishing condition there; all kinds of cloths, silk, etc. robes, and the tapestry known as *shamsāz* were manufactured. Salt mines in the neighbourhood still yield rock-salt of various colours. In Iranian legend, the foundation of this town is attributed to Dārā, father of Isfāh (Darius III. 'Adamanter').

(G. H. HART.)

DARAZI, was one of the founders of the religion of the Druses, and the most important who seems to have been Hamza, but the one who has given the name to the sect. Several authorities, both Muhammadan and Christian, have written about him and he is also referred to in the books of the Druses; unfortunately these different sources do not all agree with one another.

It seems certain that Darazi began as a Dajini missionary or *da'i* (q.v., p. 395). According to the Christian historians John of Antioch and al-Makin, the first of whom was contemporary with him, he was called Muhammad b. Isma'il son of a Persian origin; according to the books of the Druses he bore the pseudonym Nāshiqū which is Turkish. The vocalization *Darazi* is given in the books of the Druses.

He came to Egypt in 408 (1017). He had recognised Hamza at Isma'il in the preceding year (407 = 1016), but the latter says in his epistles that Hamza had been won over to the christian religion by the Me'adda (a missionary of low rank) 'Abū al-Aḥmad Ḥabīb.

In Cairo he entered the service of the Caliph al-Hakim in 408 and at first enjoyed his favour. He then tried to supplant Hamza; by 409 (1018) he had around him partisans called after him *Darazites* whom Hamza persecuted. The most important of them was Bardak'ī. There still exist writings of Hamza in which he speaks of Daraz's undertakings; he calls him, 'the insolent one, the Satan' and describes him as opposed to the Isma'is, i.e. himself, he also complains that he has 'gone from beneath the cloak of the Isma'i' and taken the title *Sayy al-Imām* or 'Sword of the Faith' (409 = 1018).

Daraz was the first publicly to recognize the divinity of the Caliph Ḥakim, according to him, universal reason became incarnate in Adam at the beginning of the world and passed from him into the Prophets, then into 'Alī and thence into his descendants, the Fatimid Caliphs. Daraz wrote a *Kitāb* to develop this doctrine, which was only an application of *Kitāb* of the previous Dajini system. *Kitāb* read this book in the principal Mosque in Cairo and, although Ḥakim did not protest, this doctrine caused a scandal. It is also said that he allowed wine, the forbidden marriages and taught metempsychosis.

According to Abu Tāhazān, Daraz in consequence of the scandal which arose, had to retire to Syria; there he preached his doctrine to the orientals, especially in the valley of Tadmor-Alah and the Hilyās (q.v., p. 628) territory. He came into conflict with the Turks and *Kitāb* in a battle against them.

John of Antioch, following him, al-Makin do not give this account of his end; according to them he was killed by the Turkish pages, *Kitāb* account of the scandal which his teaching caused, *Kitāb* Cairo while actually in Ḥakim's carriage. After *Kitāb* death his home was pillaged, and there was a riot for *Kitāb* days in the city, the gates of which had to be closed. The Turk who had slain him was arrested and put to death on another pretext. The Druse *Kitāb* would *Kitāb* one to believe *Kitāb* it was at Hamza's instigation that he was assassinated; several of *Kitāb* followers, including Bardak'ī, shared his fate (410 = 1019).

(B. CURAAS VANU.)

DARB (A.), plural *darab*, 'passage, gate, or road'. *Adab* was more particularly any road into the land of the Byzantines (cf. e.g. *Baladhuri*, p. 137, *al-mach* = the road *ad* the Taurus and the pass over Amanus (Beilan pass, i. e. p. 690), more especially those through the Fyles (Cilicia from Tarsus via Hadhāthā = Podosus (see *BEZANT*, p. 768) and Lu'lu' = Lulion to Tyara and Heraclea, and the eastern route from Mafrah (Gemmae) via Hadhāthā to Malatya. These notoriously difficult passes were emphatically called *darab al-Sulṭān* (cf. Ibn Khordadbeh, p. 100 or *Baladhuri*, p. 189 et seq.). The district around the Taurus passes north of Ḥadhāthā bore the name *darab al-Darb* in the time of the Armenian kingdom of Cilicia (see Ibn Fadl Allāh al-Qasbi, *Tārīkh*, p. 181 and 183; Ibn al-Athir, xi. 20, 21, 145).

As the word *al-Darb*, which in its technical sense appears as early as *Ismā'īlī*, cannot be

published though there is a manuscript in Mesh.

Abu 'I-Abbas's work falls into two distinct parts. The first is merely a reproduction of the *Cheridat* of Abū Zakariyā, (translated by H. Maunier, Algiers 1875) in which have been added some personal observations and reflections. The second contains the detailed biographies of the principal members of the Ash'ari sect, both African and Oriental, arranged chronologically by *shuhrah*, each of which covers 50 years, from the earliest years of Islam to the end of the 10th century A.D.

For the latter volume, Darjil's model was one of a list drawn up by Abū 'Amr al-'Abd al-Kāfi al-Warjilī, to the end of the eleventh *shuhrah*. To this he added the biographies of the celebrities in the twelfth *shuhrah* (Cf. the table in the *Année africaine*, Vol. II, given by M. de Motylinski, in his *Étude de la secte Ash'arite*, p. 30 et seq.; Algiers, 1889).

Darjil's work is valuable for the history of the Ash'ari of the Maghrib. It contains valuable information for the groups of poets of Warjila, the Warjili, and the Ash'ari where Warjila Berber communities lived after the fall of the Karamidid.

The *Année africaine* *et l'Afrique*, written in the 12th century A.D. by an Ash'ari of none of the Maghrib, Abū 'I-Kāfi al-Warjilī, al-Barrakī, gives an interesting account of the genesis of the *shuhrah* "line follow" *shuhrah* al-Barrakī, "the circumstances under which the book of Abū 'I-Abbas was composed." — Al-Barrakī led al-Zakariyā and his arrival from Qandahar, bringing with him various works, such as the *Shuhrah* of Abū 'I-Kāfi, the *Shuhrah* of Shihāb al-Dīn al-Jazālī, that of Ibn al-Jāzī and other important books. His brothers in the East had asked him to send them a book containing the biographies of the Ash'ari of the earlier centuries of the Maghrib and relating their virtues to their specimens in the west. Al-Barrakī has consulted the learned *shuhrah* who were then in Qandahar and told them of the desire expressed by their co-religionists in the east. They thought at first of Abū Zakariyā's work but they saw that it was not complete and that the style of its author, used to the better language and little bound by the rules of Arabic grammar and the exact use of terms, was often defective. They then decided that a new work should be composed giving the history of the Karamidid and the virtues of the ancient doctors. No one was more fitted than Abū 'I-Abbas to carry out this task in a worthy manner and it was to him therefore that it was entrusted.

According to a passage in the *Année africaine* (p. 210), Darjil went to Warjila in 618 and spent two years there. (A. de Motylinski).

DARESSALAM, capital of German East Africa. Darressalam is built in 6° 49' South Lat. and 39° 16' East Long. (Greenw.) in the form of a peninsula meeting a deep arm of the sea which here forms an excellent harbour, whence its name, a contraction of *dar al-salam* ("haven of welfare"), as educated natives still call it. The form *dar al-salam* is due to a popular etymology invented by Europeans. In spite of its favourable situation Darressalam is quite a modern town. In medieval times the most important town in this district was Kilwa, farther to the south and at a later period, Zanzibar. The terminus of the main caravan route from the interior was not Darressalam but the adjoining town of Bagamoyo. The little fishing

villages situated there first attained some importance when Sulaymān Madiji, Sultan of Zanzibar, began to build a palace there in 1862. From this period dates the main thoroughfare Darressalam (now called "Udud au Akadim") and the two large houses *darressalam* which the Wismān Fort was afterwards built. The prosperity of the town only began with the German occupation. When the coast-lands were still officially under the suzerainty of the Sultan of Zanzibar, Darressalam was already a station of the German East African Company to which on the 28th April 1885 the government, administration, customs etc. were handed over. This measure resulted in the great Arab rising (1888-1890), during which the company were only able to hold Darressalam and Bagamoyo out of all their stations. After the suppression of the rising the whole coast was placed under German protection (1st January 1891) and Darressalam became the residence of the Imperial governor.

At first a quiet but imposing town of officials with broad streets and numerous official buildings, Darressalam has now become one of the commercial centres of East Africa. It is connected with the interior by a railway. The line has already reached Tabora (500-600 miles from the coast) and is to be extended to Lake Tanganyika. Great European firms have permanently transferred their headquarters from Zanzibar to Darressalam, which, unlike the Oriental Zanzibar, is a European city on African soil. The town has 30,000 inhabitants, of whom 600-700 are Europeans, while the administrative district of the same name about 190,000 of whom 850 are white and 1500 foreign non-European (Arabs, Indians, etc.).

Islam, as along the coast, has made a deep impression on Darressalam. The smallest population of the town, who speak a Bantu dialect, is quite Mohammedanised. They are *Shahis* and are supposed to have been converted to Islam by Arabs from Bagamoyo in the 11th century, if not earlier. There were already *Shahis* in Kilwa when Ibn Battuta visited it. The mosques erected and the *Shahis* mind of the natives is also followed by the Arabs from Bagamoyo who have frequently settled in Darressalam and all along the coast. They lead on the whole a wretched existence and are usually called *Shahis* after the principal town of their native land. To a much higher level of society belong the *Mashai* Arabs, the lords of Zanzibar and former *shahis* of the land. They are *Shahis*. Though not occupying any high position, by far the wealthiest of the non-European inhabitants of Darressalam are the Indians, of whom roughly two thirds profess Islam. They come from the *Shahis* and have also brought the innumerable castes of their native land to East Africa. The three main groups are the three principal castes, the *Khonds*, *Shahis* (p. v., p. 758) and *Mashai*. The *Mashai* are *Mashai*, the *Khonds* and *Shahis* are in the main *Shahis* of the *Shahis* while the *Khonds* represent the *Mashai* branch (whose religious chief is the *Shahis* in Bagamoyo) and the *Shahis* champion the claims of *Mashai*; they are also called *Mashai* and their religious chief is the *Mashai* in *Shahis*. Many members of the *Khonds* congregations have gone over to the so-called Twelvers (the so-called *Shahis*, also called *Shahis* in *Shahis*) and conversions to the *Shahis* sect have taken place from the

caravan route from the Red Sea to the Persian Gulf. It was handsomely built of stone and lay at the foot of high hills in a narrow valley, and a little west (W. Hamah) which was usually dry in summer ran through it. In addition to a large and several smaller mosques it had many madrasahs. It lay in a very fertile neighbourhood and was surrounded by extensive wheat, barley and millet-fields and rich orchards with extensive date-palm groves, peach, apricot and fig-trees. The very fine breed of horses, raised in this district, was found throughout Arabia. It was inhabited by the great tribe of Anaz, amongst whom it attained its greatest prosperity when at the end of the eighteenth and beginning of the nineteenth centuries it became the capital of the Wahshah kingdom (q.v.) under the independent ruler Sa'ud, Abul al-'Asa and 'Abul Afsh. In 1818, it was taken by storm after a stubbornly resisting a six months' siege by the Egyptian general Ibrahim Pasha and almost levelled to the ground by fire; the splendid orchards and date-palm groves surrounding were mostly reduced to ruins. The Wahshah considered it unlawful to rebuild the town and transferred their capital to the town of al-Rifa', some 7 miles distant. At its zenith, Daryah had about 20,000—40,000 inhabitants (according to many estimates, nearly 60,000). At the present day there are about 1500 people scattered around the district chiefly at the time of the date harvest.

The only European, to visit Daryah in the time of its glory, was Reissner, an Englishman who visited the ruler 'Abd al-'Asa in April 1803 on a political mission from Manesty. The English resident in Oren on the coast, Captain Sattler saw it soon after its destruction, he was commissioned by the Indian government to pay its respects to the victorious Ibrahim Pasha in his camp at Daryah. In more recent times it has been visited by the traveller Palgrave.

DAROGHA (r.) "governor", "chief of police" Cf. Vula and Dinnell, *Habesh-jahann*, p. 107.

DARUM is mentioned by Mas'udih as the district in which Hatt al-Harith (q.v., p. 597) was situated. It is the Hebrew Darom, the South, which term the Jews particularly applied to the southwest plain on the coast of Judaea and appears in Ezekiel (who distinguishes it from El-Amroth) as Daruma. It is wrongly described by certain Arab historians as the goal of the expedition, in which Muhammad shortly before his death was going to reach Uthman b. Zaid; its real objective was, as is clear from the account of the campaign which was afterwards carried out, the southern lands east of Jordan.

The name al-Darum was afterwards transferred to a fortress on the road from Ghazra to Egypt, which King Amr ibn al-'As built on the ruins of a monastery of the same name. After an unsuccessful

attempt in 506 (1179) Salih ibn al-Din succeeded in taking this stronghold in 584 (1185) along with the adjoining coast-towns, but in 585 (1192) it was taken and destroyed by Richard I. The site is marked by the ruins of Idr al-Balad, 14 miles S.W. of Ghazra.

(K. BUNIA)

DARWISH. [See DAWISH.]

DARYA (OLD Persian *daryā*, Pahlavi *daryōš*) is Persian, sea or large river. *Daryā-ye Khazar* is the Caspian Sea; *Amu-Daryā* (q.v., p. 339) and *Sir-Daryā* are the Oxus and Jaxartes of the ancients, the *Hyphasis* and *Sihistan* of the Arabs. The south coast of Laristan and Kirman bears the name *daryā-ye* [Quatremer, *Not. et Extr. de*, xiv. 281, note 1]. The naval commander at Bender 'Abbas bears the title *daryā-beg*; among the Ottomans, this name has been sometimes given to the *Kapudan-Pasha* or Admiral-in-Chief; the *daryā-bashi* were, before the reforms, the administrative officers of the islands of the Archipelago. — *Daryā-ye*, "sea of light", is the name of one of the large diamonds in the crown of Persia (Polak, *Persien*, i. 374). — *Daryā-ye* is a river which rises in Mount Sabalan (Savalan) in Adharbadjan and flows to the north into the Aras; its name is connected by W. Jackson (Zoroaster, p. 194) with the Zend *daryā*, Pahlavi, *daryō*, the name of the river on the banks of which Zoroaster was born according to the Vendidad (xii. 15) and the Bundahish (ii. 3).

(C. HUANT.)

DARYA-I SHAHI. [See DARYA.]

DASKARA, the name of three places in the "14, viz.: 1. a town on the Diyala, N. E. of Baghdad; 2. a village in the district of Nahr al-Malik, W. of Baghdad; 3. a village near Najaf, on the road to Khirbat. Cf. Yaqut, *al-Mu'jam* (ed. W. Arnold), ii. 575; *Marasid al-Istisna'*, *Lesis*, *Geogr.*, ed. Juyumail, (Bagdad, 1850 et seq.), i. 402; iv. 468. Daskara is a word borrowed from the Iranian and distinguished from the Pahlavi *daski* (Pers. *daski*) = literally "handmade, a work of the hands", whence it means also "building, village, town". On this word a. *Qawāli*, *al-Mu'jam* (ed. Sachau), p. 67; Yaqut, *Lesis* (ed. Lat., i. 871, 872, 874 (a. v. *Daskara*, *Daskara*, *Daskara*); *Elshaher* in Levy, *Chaburish*. (*Verach*, p. 577 (1893) p. 430), *Perles*, *Etymol. Studien*, p. 83; H. H. H. *Gramm.*, *Armenisch*, *Gramm.* (1897), p. 135. The best known is Daskara 1; for further information see the article NASTARU.

(M. STRAU.)

DASTADJIRD, the name of a number of places on Iranian soil or within the bounds of the former Sassanian Empire (Turk). The *Maqāṭir* gives ten places of this name; the Arabs usually give the Arabized form *Dastūr* to those in the Irak; but the meaning of Dastadjird = *Dastūr* see the article *MAQĀTIR*. The most important was Dastadjird (= *Dastūr*) 1. on the Diyala, N.E. of Baghdad, to *parangas* 24 *ṣallās* from the latter metropolis (36° N. lat.). The Arab historians ascribe the foundation of this town to the Sassanian king Hormizd I. (302—325 A.D.). The probability was however only a re-foundation on the site of older settlements, for the *Artemida* of Susa must be located practically on this spot. The temple retained its greater prosperity under Khosrow II. (590—628), who made it his permanent residence and erected a number of splendid buildings. As it was the favorite abode of this king, the town was called *Dastadjird-i Khosrow* or *Dastadjird-i Malk* i.e. D. of Khosrow or of the king, to distinguish it from other places of the same name. Cf. also *Asar-e Panjgah* (*Chosroes Persicus*) and *Dehshat-e Mafāṭ* (Guld, *Syr. Chronik*, Gölz, in the *Verhandl. der öst. Orientforsch.-Ges.*, Sect. IV, 21); as a rule Byzantine and Syrian authors write simply *Asar-e Panjgah* (*Asar-e Panjgah*) or *Dehshat* or *Dehshat*; in the Talmud: *Dehshat* (a. *Verliner, Berlin, G. G. G.*, a. *Estimor, Babylon* in *Talmud*, 1883, p. 30).

The period of Dastadjird's glory did not last a quarter of a century and was suddenly closed by the great Asiatic campaign of Alexander, so disastrous to the Sassanian Empire. In the early part of the year 325 the capital abandoned by Khosrow fell into the hands of the Hellenic Emperor; it was sacked and reduced to a heap of ruins; enormous booty was carried from it to Constantinople. On this conquest cf. E. Gieseler in the *Byzantin. Zeitschrift*, in 188 et seq. Dastadjird was never able quite to recover from this crushing blow; this is sufficiently explained by the fact that only a few years later the Sassanian Empire, considerably weakened by the Byzantine wars, finally collapsed before the vigorous onslaught of the Arabs.

In the Mohammedan period a small town again arose on the imposing ruins of royal splendour, which at a later period still excited the wonder of the Arab geographers (cf. in particular the accounts of Yāqūt and Ibn Rosta); it was of some importance as a caravan station on the great highway from Hamoul to the Iranian highlands (the so-called *Ḥamoul-Ḥamoul*). Yāqūt and Ibn Rosta describe it as a flourishing place surrounded by date groves and cornfields. It is not known when the Arab Dastadjird became deserted. It probably was ruined like so many other, once busy, towns in the Irak by the Mongol invasion so disastrous to Persia.

Even at the present day there are considerable relics of the Sassanian and Mohammedan periods of Dastadjird. The latter name has however now utterly disappeared from the district; the ruins are usually known as *Kadi-Baghdad* = *Kadi-Baghdad*, a name also given to other ruins in the Irak, which is to be explained from the rather common Turkish custom of naming ancient ruins after their important ruins in the neighbourhood. Cf. above p. 363 and Rosta, *Erzählung*, s. 216;

will. 924 et seq., 922 et seq., 627. The ruins of Dastadjird were visited and described on several occasions in the sixteenth century by European travellers, e.g. von Keppel (see *Kaiser* op. cit., II, 502), C. Rich and H. Rawlinson. The latest account is from the pen of E. Herdell, who spent some time there in September 1905. According to his account the ruins are about 12 miles south of Shahr-i Bih, left of the Diyala, across the Alabrud, and are surrounded by swampy, pasture, almost impenetrable ricefields. Three groups of ruins may be distinguished: 1. the Zindān, a city-wall flanked by towers of which 11 have survived. The Persians also give the name *Zindān* = "prison" to other ruins elsewhere whence real origin and use is unknown to them as well as to the remarkable natural features (caves) of *Maḥd-i Sattān* near *Maḥd-i Sattān* (Guld in *Maḥd-i Sattān*), and at *Takht-e Sattān* (in *Maḥd-i Sattān*) and *Zindān* (near *Yard*). Zindān is clearly identical with the building outside Dastadjird, surrounded by a high wall mentioned by Ibn Rosta, which he calls a *ḥimā* (wall) of the Sassanian king. Yāqūt and Ibn Rosta describe it as a fortification of clay. 2. The *Ḥimā*, 1 mile south of Zindān, the ruins of a second city wall built of brick in the usual Sassanian style. 3. *Kadi-Baghdad*, 2 miles north of Dastadjird, the ruins of Dastadjird proper, ruins occupying a quadrilateral area of about half a square mile surrounded by a wall with round towers. The ruins in this area are undoubtedly those of the Islamic period. In Zindān and Dastadjird may be identified one of the Sassanian places (*Madārah*, *Madārah*, etc.) the existence of which is in the neighbourhood of Dastadjird is mentioned by the Byzantine historian Theophrastus. The latter also gives *Maḥd-i Sattān* (*Theophrastus*, ed. de Boer, p. 121) as a name of the district of Dastadjird, in which form we may easily recognize the ancient name of the district under the Sassanian system of partition of the country; among the Arabs (cf. e.g. Yāqūt, I, 539, 793, 813); *Kadi-Baghdad*, still used in the form *Kadi-Baghdad* with a popular Arabic etymology (probably = *madārah*; cf. *madārah*); see also the new Arabic periodical, *Maḥd-i Sattān* (*Baghdad* I, 1911-1912, p. 309 et seq.).

DASTUR (s.). The name of the tribute among the Persians, viz. custom, a percentage, fixed by custom, or cash payments, etc., cf. *Yāqūt* and Herdell, *Maḥd-i Sattān*, s. v. *Dastūr* and *Maḥd-i Sattān*, *Maḥd-i Sattān* in *Maḥd-i Sattān*, a descendant of *Maḥd-i Sattān*.

of an effort to explain certain imperfectly known verses of the Bible. Muhammad knew that David slew Goliath (Yahish) (*Kor'ân*, *Sura* 2, *ay.* 21) and that he received the Tablets from God: The Book of Psalms is one of the four volumes of the Bible with which Muhammad was acquainted. David shared with Solomon the gift of wisdom (*Q. ay.* 27, 12); together on one occasion they achieved a remarkable judgment in a case concerning the damage done by some sheep in a field. The commentators say that in this case, Solomon, though only 12 years of age, showed his wisdom by imposing on the sentence passed by his father. In another passage, the case of two suitors is referred to, who came to David to reproach him with his fault in the case of taking him to deliver judgment (38, 1-4). Mention is made of the resistance of David to Haman in *Sura* 38, 1-4. The royal prophet is thought to be the inventor of counterfeit-mint, that is to say he replaced by them the richness of plates of metal. Iron seemed to become ductile in his hands (21, 80 and 34, 16); he had the gift of song; the mountains and the birds alternated with him in his songs (38, 10; 34, 10; 38, 11-14); this is evidently only the literal interpretation of verses in which the Psalms invoke the hills and beasts of the field to praise the Lord. Lastly by combining verses 5, 1, and 2, 61 of the *Kor'ân* we learn that David punished Sabbath-breakers by changing them into monkeys.

The brief references to David are considerably developed in the commentaries and agree in the main points with the Bible: The following are the main points in *Tahrik*, *Yahish* (Goliath), a descendant of the *Adites* and *Thamudites*, having attacked *Talut* (Saul), David slays him with his sling; he marries the daughter of *Talut* and shares his authority. *Talut* becomes jealous and tries to kill him; David flees and hides in a cave across the entrance to which a spider weaves its web, thus protecting David from Saul. *Tahrik* gives David's genealogy, tells the story of *Bathsheba*, wife of *Uriah*, David's repentance and the plan of building the temple; he also adds a few anecdotes.

Muslims knew the *Mishrab* *Da'ud*, built by this king in Jerusalem and still standing in the *Khutman's* time; it is, he says, the highest building in the city; from it one can see the Dead Sea and the Jordan. It is apparently the Citadel or Tower of David. Muslims had some slight acquaintance with the Psalms.

Down to the 12th century the Muslims like the Christians before them located the tomb of David in Bethlehem although other traditions regarding its site were known to them. In the Crusading period a tomb alleged to be David's was found on the southwest hill of Jerusalem. In the 12th century it was taken over by the Muslims who still regard it as particularly holy (cf. *al-Maqarrî*, vii, 898-902; Kahle in the *Palestine-Jahrbuch*, vi, 74 and 86).

David is of a certain importance among the mystics. *Ishtâk al-Dîn* *Rûmî* in his *Makâmât* quotes him several times. The *Asâd al-Dîn* is a very early work of Sûfism, exaggerated in an almost absurd fashion the legends on the charms of his voice: the wild beasts, we are told in this work (p. 402-403), used to leave their lairs to listen to him, water ceased to flow and the birds fell from the sky. People followed him into the desert forgetting to eat and drink for days;

many of his auditors perished in this state of ecstasy. On one such occasion 700 virgins and 22,000 men died. Some later features of his character are given in the same work e.g. (p. 197): "Hate thy soul, for my love degrades on the balmed of it".

In Kurdistan there still exists a small sect of followers of David (*Davidians*); they live in the mountains, district of Kurad, near Khânâbâd, and at Masûla, north of Baghdad; to them David is the most important of the Prophets. (See Dr. Perc. Ammann, *La Secte des Davidiens en Kurdistan*, 1903, 2^e p. 60-67).

Bibliography: In addition to the *Kor'ân* and the works dealing with the lives of the Prophets: *Masûdî*, *Les Princes d'Irak* (ed. and transl. Barthélémy Meynard), I, 106-112; *Tahrik* (*Parnaz* (Kerman, Iran), Zohrabeg); the *Kor'ân al-Makrûm* by al-Jahshî, transl. Nicholson (Arab. DA'UD = **KHILAF AT-ISHAHANI** **ABDULLAH**, the founder of the *Zahiriya* school of Arab law, which regards only the literal meaning of the *Kor'ân* and Tradition as authoritative. *Da'ud* was born in Kufa about the year 200 (815), and was brought up in Baghdad, afterwards studied in Basra and Nishapur (with *Ishak* b. *Rahwaili*) and returned to Baghdad where he died in 270 (883). Although his father belonged to the *Hanafi* school, he attached himself to the *Shafi'i* but went even farther than they, as he rejected not only the *Ra'y* but also the *Qiyas*, by which he really denied the *Tajwid*, i.e. the unconditional adherence to the teaching of the Imam, which the *Sunni* jurists consider necessary. He only nominally approved the validity of the consensus (*Ijma'*) as he limited it to the companions (*Sahâb*) of the Prophet. His piety and ascetic life are much commended, but his literary labours were less highly thought of, so that nothing of them has survived, although he composed a great many works. But he collected many pupils around him and his teachings afterwards found a numerical but highly gifted protagonist in *Ibn Hâjam* (q.v.). Cf. the article *Zahiriya*.

Litt.*, I, 183 et seq.

DA'UD PASHA, the name of several Ottoman officials of high rank.

1. *Da'ud Pasha*, *Bayazid* II's Grand Vizier, an Albanian by birth, was taken prisoner in his youth and brought up at the Imperial court; he began his career under *Mehammed* II, fought at *Belgrade* of *Anatolia*, in the battle of *Turdian* (1473) against *Usman* *Ilkhan* (Sa'd al-Din, I, 537) and, as *Belgrade* of *Kumeli*, took part in the siege of *Silivria* in 1478 (Sa'd al-Din, I, 564). In 1482 (1483) he became Grand Vizier under *Bayazid* II. (Sa'd al-Din, II, 216) and was deposed on the 4th *Radjab* 902 = 8th March 1497 (Sa'd al-Din, I, 2); according to the *Venezian Report* in

von Hammer, *Geschichte der Osmanischen Kaiserz.*, II. 307 et seq. on the 3rd Murad) the rumour alleged being that he had facilitated the flight to Petros of Mirza Ahmud, a grandson of Uzun Hasan, who had married a daughter of Rhyasid II. (Leconte de Lisle, p. 644 et seq.) He was sent in disgrace to Khorosha, where he died on the 4th Rabi' I. 1000 (20th October 1498) (Sa'd al-Din, I. c.). While Sultan Vair he only twice took the field: in 892 (1487) he subdued the Warsak and Torgud tribes in Kars (Sa'd al-Din, II. 22 et seq.) and in 897 (1493) he accompanied the Sultan on his campaign against Albania (ibid., II. 71). The great triumph built by him at Constantinople in 895 (1490) (q. v. p. 871) is celebrated and after it one of the gates on the seawall on the Sea of Marmora is named (*Medinet al-Zawahir*, I. 104 et seq.). His name also survives in the plain of Dâud Pasha before the landwalls of the city, where the army assembled on leaving Constantinople for Roumelia; Dâud Pasha had built a Serai there for himself (*Medinet al-Zawahir*, I. 298, cf. Kantamir, *Gesch. des Osman Reiches*, p. 428; v. Hammer, *Gesch. d. Osman. Reiches*, II. 280 in notes chronol.).

2. Kars Dâud Pasha, a Rumelian, brought up in the Imperial palace: in 1013 (1604) as Beglerbey of Rumeli, and entrusted with several military expeditions in Asia Minor by Ahmed I., he accompanied the expedition against Kirman in 1613 and was Kapudan-Pasha in a few days in Mustafa I.'s first reign (1613); in the reign of Osman II. he took part in the Chinese campaign in 1652. At the outbreak of the revolution against Osman II. (May 1666) he was appointed Grand Vizier by the Janissaries on the proposal of Valide Sultan, the mother of Mustafa I., whose sister he had married, and carried out the execution of the deposed Sultan (20th May 1666). He was generally abhorred for this cruel deed and was imprisoned in a few weeks on the 9th Şaban (13th June), subsequently brought to book and executed on the 7th Rabi' I. 1032 (9th January 1643). His tomb is in the Mosque of Murad Pasha in the Akhrai quarter (*Medinet al-Zawahir*, I. 304). Cf. *Medinet al-Zawahir*, p. 304; von Hammer, *Gesch. des Osman. Reiches*, I; Rœt, *Agglutinations*.

(J. L. MARIUSSEN.)

3. Dâud Pasha, last Ottoman governor of Baghdad and the Mamluk line, a Georgian slave born about 1488 = 1774, taken to Baghdad at the age of eleven and bought by Sulaiman Pasha: in the 20th of twenty-seven he was appointed *Khazendar* (treasurer) to the governor; becoming the brother-in-law of Bah' al-Din, son of Sulaiman, he was elected by the latter as steward (1232 = 1814) but almost immediately dismissed; dissatisfied he assembled a few Mamluks, entrenched himself at Sulaimaniya (1232 = 1816) and demanded the office of wâli, which he received; he entered into his office without striking a blow (5th Rabi' II. 1232 = 22nd Feb. 1817) and had his predecessor assassinated. During the 10 years his power lasted, he restored peace to the country by pacifying the Yandis and the Aneres (1234 = 1818); he prevented the advance of the Persian Army, contributed to the suppression of the Janissaries, carried out numerous public works (canals dug, mosques repaired or built) and instituted manufactures of cloth and gun-factories; he engaged a French officer, Devaux, whom he

took from the Persian service in 1811 a body of ten thousand regular soldiers which he had created (1234). His delay in forwarding the contribution demanded by the Porte at the conclusion of his war with Russia decided the government to put an end to the practical independence which the province of Baghdad enjoyed; Shah-Kendi, entrusted with the task, was assisted by twenty emissaries of Bah' al-Din who tried to fight but were defeated, rather by disease and pestilence than by the military operations conducted against him (1247 = 1832). When taken to Constantinople, Bah' al-Din was well treated by the Sultan Mahmud II and Ali al-Khalidi; in 1260 = 1844, he was appointed governor of the Tomb of the Prophet at Medina where he died in 1267 = 1851 and was buried opposite the tomb of the Caliph 'Abd-Allah; his graves have been dug by the Arab post 'Ali al-Khalidi al-Akhrai.

Huard, *Histoire de Bagdad*, p. 166, 175.

(CL. HUARD.)

4. Dâud Pasha, first governor (*Mahkumdar*) of the Lebanon province (1866 = 1868). He was an Armenian Catholic, born in Constantinople in 1816, who began his official career as attaché at the Turkish Embassy in Berlin and was afterwards Consul in Vienna. In 1868 he was appointed Minister of Public Works but was unsuccessful in an attempt to negotiate a loan in Europe and, as his health also began to fail, he had to give up his office. In 1873 he died at Maritz of Saint Roy, *Journal de Saint Roy*, III. 211.

DĀUD PŌTRA is the name of the tribe to which the family of the Nawwabs of Bahawalpur belongs. The name means 'descendants of Dâud' and the tribe claims descent from Dâud b. Yûsuf a member of the Sayid family known as 'Ashraf, from which also springs the Khatun family of Sind. There can be little doubt that this family is purely indigenous, probably of Rajput or Hindu descent, and that the legends of Ashraf origin from a member of the Egyptian Ashraf Khutun, who is supposed to have come to Sind at the time of Sultan Muhammad Tughlak is of late invention. The family first emerged from obscurity in the XVIIIth century and obtained importance through timely submission to Nadir Shah, who gave them some of the possessions of the Khatuns including Bahawalpur. Sayid Muhammad the head of the family was killed afterwards in a war with the Khatuns, but the family continued to rise in importance. His son Bahawal Khan founded the town of Bahawalpur in 1162 H. (1748 A. D.) and took the title of Nawwab. Under Ahmad Shah Durani and his successors the dominions were enlarged. Bahawal Khan II was involved in war with the Afghans, and Timur Shah invaded Bahawalpur but left it without success, and his successors were rather as refugees than conquerors, as for instance Shah Shuja' al-Mulk in 1210 H. (1804 A. D.) 12100 Afghans visited Bahawalpur and the first treaty was made with the British Government. Sayid Muhammad II succeeded in 1224 (1809); he was involved in wars with the Afghans tribes beyond

the Indus and made friends with Rājā Singh, who after he had conquered Dara Ghāz Khān from the Mughals, gave him an honor of 250,000 rupees a year to Sādā Muhammad. This involved him in further trouble with the turbulent Baluch tribes, and especially the Khosh tribe who rejected his demand for the head of a daughter of their chief. His successor Bahadur Khān III was unable to fulfil his obligation to the Sikhs and Rājā Singh sent an army under Genl. Ventura and expelled him from Dara Ghāz Khān. To avoid destruction by the Sikhs, he allied himself with the British, gave facilities for the passage of troops during the Afghan wars of 1839-1842 and came to the help of Edwards during the siege of Mirdā in 1846-47. After the annexation of the Panjāb the Nawwāh of Baluchwalpur were maintained in possession of their dominions, but were troubled with internal feuds. The present Nawwāh is a minor. He holds the second rank among the chiefs of the Panjāb and receives a salute of 17 guns from the Indian Government.

Bibliography: *Gazette of Baluchwalpur* (Lahore); Shabraz 'Alī, *History of Baluchwalpur* (London 1846).

(M. LONOWORTH, HANES.)

DAW (often written QUAW, etc.), an Arabic word on the Red Sea and elsewhere. The word is probably connected with *dawādī*, plur. *dawādīd* (shop) and appears to be of Yemen origin.

Bibliography: Yule and Darnell, *Hindustan*, vol. 2, p. 144.

DAWA (plur. *dawā*, v. p. 144) "medicine", "medicament", "drug". — The word is first used in the cleavage of ingredient (compound) part of a medicine. Thus in Arabic prescriptions, after the individual components are stated — usually introduced by the word *al-shay'* "let there be taken" — there very frequently appears *al-dawā* *al-kullī* "all these ingredients are to be ground, sifted, and combined". *Dawā* is also used in the wider sense of "medicine", "drug" (a medicine composed of several elements). Medical treatment is therefore called *al-dawā* *al-kullī* in opposition to surgical (*al-jarḥ* or *al-jarḥ*) and in medical work the prescriptions themselves are called *al-dawā* or *al-dawā* *al-kullī* as are given with the simple title *dawā*. The various prescriptions have the separate names according to their character, eg. *dawā* *al-kullī* "universal medicine", *dawā* *al-kullī* "purge medicine" (for other names see the article *DAWĀ*, p. 144).

An attempt has been made to derive the word "drug" common to all European languages from *dawā*, Cf. C. F. Seybold in the *Zeitschr. für Deutsche Wortforschung*, 2, 218 et seq.

(R. MITCHELL.)

DA'WA, means accusation or arraignment (to civil and criminal law). It should be noted that according to Muhammadan law, prosecution is still partly a private affair as much as the aggrieved person himself or his kins (and not the authorities) has the right either to inflict punishment himself on the guilty individual or to demand his punishment. The law however distinguishes between laws made by man (*ḥukm* *al-bānī*) and divine laws (*ḥukm* *al-lāhī*). There is for example a human claim for justice when any

one has to demand the blood-money (*diyya*) in atonement for a murder or the price of a thing sold by him or the return of something stolen from him by a thief, if on the other hand no human being has been affected in his rights, but it is solely a divine law that has been transgressed, the punishment of the guilty one is regarded as the right of God. In the latter case every believer has the right to bring the offender to judgment *ad-dawā*, so that the judge may give sentence on him (*ḥukm*). Such an accusation is called *da'wa* *al-bānī*, and the office of *muftī*, who superintends commercial transactions in the markets and bazaars and when occasion arises has to act as public prosecutor, has arisen out of this right to arraign those who transgress divine commands. A *da'wa* *al-bānī* is not allowed only when it is a question of a crime which requires a *ḥukm* *al-lāhī*. In this case the judge, if suspicion falls on anyone for any reason, must himself go into the matter and order punishment to be executed on the guilty individual in accordance with the strict letter of the law, if his guilt is conclusively and legally demonstrated. According to common law however it is regarded as meritorious (even for the judge also) to avert punishment from the guilty one as far as possible, if it is purely a divine law that has been transgressed. (Cf. the article *DA'WA*, p. 132).

As regards impeachment on a question of a law of man, the following is in the procedure to be observed. After the accuser (*al-muḥḍi*) has duly preferred his charge and explained it, the judge hears the reply of the accused (*al-muḍḍī* *al-muḍḍī*). If the latter contends the justice of the accusation it results in further proof. If, on the other hand, the accused disputes the justice of the charge, the judge must as a rule not pass sentence until the prosecution has brought forward evidence in support of his statements. The judge is however allowed in certain circumstances, if he is personally acquainted with the facts of the case, to give a verdict from his own knowledge without further evidence being brought by either party, and he is never required to give a verdict based on evidence formally valid adduced by the parties, but contrary to his own better knowledge. Valid evidence in a lawsuit is mainly the testimony of free adult believers, who are known as *ḥuḍūd*; written documents are not legally valid evidence unless their contents are confirmed by reliable witnesses. If the prosecutor cannot bring any proof he is acquitted if the accused swears that the charge is unfounded. If the accused declines to take this oath, the accuser is held to be in the right if he will testify on oath to the justice of the charge. The judge also may make one of the parties take an oath in order to make the testimony of a witness quite conclusive. Finally it is to be noted that the judge must dismiss a charge by a statute of limitation if it is proved that the prosecution has, without valid grounds, been an unusually long time in making good his charges, for this can only be interpreted as meaning that the accusation is unfounded. The period of limitation is however not definitely fixed. According to some texts it is 15 years, while others say it is 30 or somewhat more.

DAWAIR (See DAWAIR)

DAWĀḤ, "an encampment of Beduin Arabs, where the tents are arranged in a circle or ellipse, the empty space in the middle being reserved for the *dhawāḥ*, this very notion of an encampment is found among the Beduins of the East (North Syria, Mesopotamia) and among all the nomads or semi-nomads of North Africa; and the name *dawāḥ* which is given to an apertures in certain medieval travellers and geographers. In the east, the exact form of the word is *dhawāḥ* or *dhawāḥ*, and in the Maghrib it is *dawāḥ* or *dhawāḥ* (plus *dhawāḥ*). The number of *dhawāḥ* which make up a *dhawāḥ* is very variable, it may be as many as several hundreds, while on the other hand it need not be more than a dozen. Many reasons, e.g. the abundance of pasturage, the varying state of security or insecurity etc., lead alternately to the breaking up of the same body of Beduins into *dhawāḥ* of little importance or to reuniting into *dhawāḥ* of considerable size. On the whole, the permanent state of peace and security introduced by the French conquest into Algeria and Tunisia tends to bring about the ultimate disappearance of the great groups of tents. — In the administrative language of Algeria, the word *dhawāḥ* has lost its primitive significance and is used to mean a better settlement, nomad or sedentary, under the authority of the same chief, *dhawāḥ* or *dhawāḥ*.

DĀWAR [See **ṢAMIN-1** **DĀWAR**.]

DAWASIR or **DOWAN** is the name of a tract of country lying to the southwest of Najd in Arabia. It is contained within latitude 21° and 24° N. and longitude 44° to 46° E., and forms one of the districts into which the kingdom of al-Ri'aj is divided. The extreme limit of this kingdom in a southerly direction is the Wadi Khatayil which separates the Wadi Dawasir from the 'Asir province of the Yemen. The Wadi Dawasir itself seems to be the continuation in a northerly direction of the W. 'Asirah and W. Raha [q. v. p. 727] and is itself continued by the W. al-Ri'aj. The province, which is named after an Arab tribe, lies immediately to the north of the great southern desert or Lahaz [q. v.] and is itself described as barren and unproductive. Throughout its shallow length of over

two Arabian miles or ten days' journey are scattered villages of painted herds. The inhabitants are as inaccessible as the dead. They live where ever possible, by plunder, and are said to be the most treacherous and dangerous of all the Waddis. Falcgrave wrote that they had long already submitted to Muhammad, and are called "the most oppressed and the most contemptible among all the Arabs." I thoughtly wrote that one informant told him that one night only a hundred or three days through the Wadi Baranah without leaving the palm-trees for any length of time, but the climate is so hot as what has been given above. It was also said to be filled with good villages of some of which I only give the names. The distance from al-Ahadi to Wadi Bishri was said to be twelve days' journey for a *ghazal*. It was also said that the well on was found there.

(T. 44. 4424.)

DAWATDAR (*DAWADAR*, *DAWADAR*, *DAWADAR*) was composed of *Amirs* or *Sans* and *Jem*-holders, called *Sans*. At the proximity of European pilgrims, was the title of an official in the Mamluk kingdom, who conducted the affairs of the Sultan's household, and the private secretary received the mails direct from the Sultan from the exterior, had at the Sultan's letters signed by him and dispatched his supervised the remuneration of the Mamluks and had therefore the deciding vote in the assessment and allotment of the fiefs. The office of *Amir Dawatdar* or *Nakib* (*Gharib Nawaz*) was at first held by a Mamluk, who being a foreigner was often not sufficiently well acquainted with the Arabic language. Sultan Kalā'ūn therefore found it necessary again to organize the Privy Chancery on the lines on which it had existed in the Fatimid period. The importance of the Grand Dawlat gradually increased. Even in the time of Selīm I (Jan II) was chosen from among the commanders of a 1000 Mamluks generally. In the later period of Mamluk rule in the sixth and beginning of the eighth centuries, his influence often turned the scale, particularly in the Grand Dawlat frequently held at the same time the office of *Kutub* (Master of the Household), and of Chief negotiator of treaties (*Khatib al-Ashraf*). Besides the Grand Dawatdar there was also a second Vice-Chief with the rank of an Amir of 100 Mamluks, a third with the rank of an Amir of 50 Mamluks, and two holders among the body guard (*Hafid*) to Cairo and in each province. A Dawatdar Sahib also in Damascus continued, according to Ibn Isma'il account, his office was to conduct the correspondence between the Sultan and his Mamluks, besides all the higher officials had Dawatdars of their own, corresponding to the modern private secretaries.

DAWLATABAD, situated in the north-western corner of the Sultan's dominions, is the ancient Urvastat or Urvastu, which has been identified with Prastava's Tishra. It was the capital of the northern Yakhis (from 1187, until their final overthrow by the Muslims in 1314. In 1324

Persian calendar, and also the name of the 8th, 15th and 23rd day of each month, to which the name of the next day is added to distinguish them from one another, thus: *Day for Ashura, Day for Moha, Day for Raza*.

DEBBO. A town in the east of Morocco at the western end of the chalk range which runs from Tlemcen to Debbo; it is 3328 feet above sea-level (according to De Pourcauld), about 85 miles, as the crow flies, from the sea. It has a temperate climate. Debbo lies in the upper valley of the Wad Ischah, a tributary to the middle Muluya on its left bank. "Debbo" is the Pourcauld "is built on a delightful site on the foot of the right bank of the valley, which rises there upright to a height of 250 feet above the river; it forms a high wall of yellow rock, over which run long crevices with dark foliage. At the top lies a plateau with an old fortress in a commanding position on the edge of the precipice with a high minaret and crumbling towers, on the other side of the plateau is a series of steep walls of rock and steep slopes rising to the summit of the heights. There, 2500 feet above Debbo is a long wooded ridge called the *Gade*. Brooks running from the mountain top fall in deep gorges down these steep walls and clothe the surface with bands of silver. Debbo is surrounded by splendid gardens; vines, olive, fig, pomegranate and peach trees form thick groves around the town, and extend beyond along the ridge of the Wad. The floor of the valley is covered with pasture, fields of wheat and barley rising up its lower slopes".

It is not possible to fix the date of origin of Debbo. Historians mention it for the first time in connection with the partition effected by 'Abd al-Hakim in the 11th or 12th century among the Shaddad tribes. The district of Debbo fell to the Umayyids and the town became the capital of their fief. These Berbers organized into a kind of confederate tribe, were entrusted with the task of protecting the kingdom of Fez against the attacks of the rulers of Tlemcen. Thence resulted numerous struggles of which the best known is the war of Abd al-Hakim II., king of Tlemcen, against Ibn Zaydun, lord of Debbo, and his ally Hammudid b. 'Arif, lord of Ghafat and chief of the Mulayhi Arabs of the Angal country to the south of Debbo (Soud, Aglat, Soudja etc.). In this war, in the 12th century of our era, the lands of Debbo and of Ghafat were utterly devastated by the king of Tlemcen.

The fall of the Marinids and the rise of the Beni Waissa brought about a revival among the Arabs of the Angal country, who entered the service of the Tlemcen dynasty. Wars followed between the Umayyid Marinids of Debbo and the Arabs. The latter besieged the town; the Marinid chief Ibn Kabu negotiated with them, then installed himself at Debbo about 1450 he founded a practically independent principality. This state lasted for over a century, Muhammad III. the third successor of Ibn Kabu, had a fortress built, erected the mosque and its tall minaret, welcomed many foreigners to his town, particularly Andalusian Jews who had been driven out of the Spanish conquest. To this day the Jews of Debbo divide themselves into native and Andalusian. It was in the reign of the Amir Muhammad that the Beni Waissa sovereigns of Fez

were forced to recognize the practical independence of the descendants of Kabu. They were too much occupied with their struggles against the Spaniards and Portuguese in the west and north of Morocco, to undertake the difficult task of forcing the Amir of Debbo to submit.

Nevertheless the descendants of Ibn Kabu took up arms on behalf of their Marinid sovereigns against the Sidiyan Shaddads who were trying to overthrow the kings of Fez. After the capture of Fez from the Sidiyan Muhammad al-Mahdi in 1554 we find the Amir of Debbo as an ally of the Marinid Ibn Hamdu and of the Turkish Beylerbey Salah Rais. The second Sidiyan Sultan, al-Ghulab al-Hakim, forced the last Amir of Debbo, Ahmad, to come and live in Fez. On the death of the latter, the Sultan extinguished the principality and placed the territory of Debbo under a Pasha in 1563.

From this time onward the history of Debbo is full of obscurity. There were not only internecine wars for pre-eminence between Arab and Berber tribes, wars in which the people of the town played a part and in which their town was often at stake. The town gradually became so depopulated that the Jewish merchants in it were ultimately more numerous than the Muslims. Debbo became merely the commercial center of Eastern Morocco and did not have an important garrison. The disputes about boundaries between the Turks in Algeria and the Sherifs of Fez, but their scope farther east the upper valley of the Wad Muluya and the basin of the Tafus.

From the time of Mulay Hasan (1793-1804) there has not been a Pasha at Debbo, which is over 100 miles from the frontier of French Morocco. Debbo became ruled like the majority of independent Berber districts by *caids* and *shaykhs*. The Muhammadan population recognized the authority of the Amir of Fez, who annually sent Ibn Khalifa to collect taxes; the Jews recognized the Pasha of Fez as *shaykh*, to whom they regularly sent their tribute. This state of practically complete independence facilitated the anarchy engendered by conflicts between Berbers and Arab *caids* (political considerations).

In a period which cannot be exactly defined, about the middle of the 18th century, the Ulad al-Hakim Arabs, already masters of the right bank of the Upper Muluya and the Rakkam (in the south of the Gade or mountainous plateau of Debbo) ultimately secured the town of Debbo also, in which two of their sections, the Ulad Vaut and the Ulad 'Abd definitely installed themselves. Since then Arab influence and the Arab language have been predominant in Debbo to such an extent that the Berber language is only spoken in the *ghor* of the surrounding mountains.

The accession of the Mulay 'Abd al-Aziz (1804), and the rebellion of the claimant *caid* 'Amara, were the signal for a renaissance of anarchy in this region. Ibn Hajja, a Berber of the Beni Shammun, who had distinguished himself in the pretender's war, brought the region under his rule and tried to make himself independent. But in 1806 at the instigation of a Berber Jew Yuda b. Harka, the town and all the surrounding tribes proclaimed the pretender. The latter appointed *caids* from among his officers in all the tribes, but these foreign *caids* were incapable of putting an end to disputes between

the various tribes and to put down the resultant anarchy. They were content to collect tribute from their subjects and to oppress them. Abd al-Halib, Kaid of Dabla, called by his enemies the "tyrant", alone held out. He took advantage of his position to revenge himself on his enemies, the Andalusian Jews. The latter attacked him before the Rabbinical tribunal of Fes and even before that of Jerusalem, the Kaid was condemned but his exploits only ceased with the French occupation of the town, which took place in 1911 after the proclamation of Moulay Hafsa by the Andalusian Jews and the Mohammedan Arabs. It was necessitated by the justice in local disputes, the Berber attempt to plunder the town but particularly by the assassination of several Frenchmen. Dabla is one of the four markets to be jointly regulated by France and Morocco in the Algerian-Moroccan hinterland (Art. 3 of the Franco-Moroccan treaty of the 20th April 1903). The occupation had hitherto been postponed.

The geographical position of Dabla makes it the capital and sole centre of supplies for the Berber and Arab tribes of the valley of the middle and upper Moulouya. Around the town the mountains and their higher tops occupied by the Berber tribes of the Beni 'Amar, Beni Yala, Beni Fashar, Beni Dabla, Beni Kila, Beni Baghila, Beni Adnan and Beni Khalfun; the low lying lands in the valley belong to the Arabs and are occupied in the south by the Uad al-Mahid, in the north and east by the Uad Wajima, the Hamara, the Ahla and the Karam, etc. These peoples who are a mixture of Arab and Berber elements are being driven to the east by the Beni Wajima, who are continuing to break them up.

Dabla consists of three parts, Dabla proper with its fortress Kasba Dabla, and a suburb Mezzal on the left bank of the valley. Dabla has 2032 inhabitants of whom 730 are Mohammedans and 1302 Jews. The Kasba has 264 Mohammedans and Mezzal 234; in all 530. The town is divided into four quarters: 1. the Kasba (Arabic of Berber origin); 2. the Uad Wajima, Arabic; 3. the Uad Mahid, Arabic; 4. in the centre the Jewish or Jewish quarter. The inhabitants of the Kasba claim descent from the Marabuta. The Jews are divided into Kharim (sons of Kharim) who are Berbers, and Andalusians (Uad Marabuta, Uad al-Mahid, Uad al-Mahid, Uad al-Mahid and Uad al-Mahid).

The Kasba claim to be descendants; but it is in their quarter that the only mosque in the town is found. The Jews have 12 synagogues of which two are particularly notable for their historical decorations. The writers say that the Kasba was constructed by Christians; in any case its mosque is remarkable for its size and tall minaret.

The Kasba Dabla is square in form like those of Tlemcen, built of adobe (a kind of plaster) and was surrounded by terraces in spite of its high situation of the town. Each has its *prine*, a kind of oven for baking bread and one has a wall or granary. The latter are replaced by *huffa* breakers, in which the natives store their grain.

Before the troubles of the last few years the municipal government of Dabla was carried on by three *shaykhs* elected annually by the citizens. They were also charged with the duty of administering justice among Mohammedans. Among the Jews, on the other hand, justice was admin-

istered by a Rabbinical tribunal which still exists. It consists of a Chief Rabbi and two Rabbinical judges. These three are appointed by the members of the local community called *shikh* (place of shikh). The *shikh* are nominated by the *shikh* of Fes. It is clear therefore that the Jews are an independent element, for the *shikh*, in the midst of almost independent peoples. In the case of an appeal the case is carried before the Rabbinical tribunal in Fes which is the final court of appeal.

The marriage customs of Dabla are those of the Berbers of the district except as regards the Andalusian Jews who follow the customs observed in Tlemcen and Fes. The Andalusian Jews can dispose of her dowry and receive it under the supervision of her husband. The Berber Jews possess nothing; her husband has bought her from another Jewish family, and she is the property of her lord and master. The Jews of Dabla are polygamists.

The Andalusian Jews dress in the western (Tlemcen, Fes, etc.) fashion while the Berber Jews follow the custom of the Arabs or Berbers of their district. The Jewish women dress like Mohammedan women but do not wear the *magaya* of the Mohammedans. The Jews wear a headscarf round their heads and do not wear the *sharaya*.

The women make carpets, which are sold in Tlemcen, *magaya* cloths called *shaya*, which after being unrolled by the men had a market in the country round. At Dabla black soap is also made as well as shoes and other Arab household requisites.

The much frequented weekly market of Dabla is held on Thursdays but the Berber Jews are not content with displaying their goods there; they go to trade also among the tribes and towns of Algeria of the Uad region and the Upper Moulouya. Being in a kind of feudal system of protection — *Kell* *Yahia* *Al* *Yahia*, "every Jew has his master", says a local proverb — they trade in comparative security up to borders of the lands still unoccupied. For this the *marabuta* makes an agreement with a Berber chief, pays him an annual sum, leaves with him in his *hara* one of his wives and her children, and by an oath on the Bible declares himself the chief's man. Consequently the Jew may freely go about wherever the influence of the chief extends. This custom, which was noted even in the middle ages by al-Bakri, is general in the Moroccan Atlas.

Agriculture, favoured by the climate, is prosperous in the neighbourhood of Dabla. Mohammedan Jews alike are landlords and cultivators. The Jews work as *ghannama*, i. e. as hired labourers for a fifth of the gross harvest. The unit measure of labour is the *shaya*, the amount which a pair of oxen can till in a year, as in Algeria. There are fine nut-trees around the Kasba Dabla. The woods around are unfortunately rendered unsafe by many wild beasts and a few panthers.

To the south of Dabla is a fountain the building of which according to the natives dates from Roman times. They also say that their town in over 500 years older than Fes. This fountain and many others supply the beautiful gardens with water. The waters irrigating them are divided according to the number of square feet to each. The length of the time they are to be watered is fixed as follows: by day the hours are decided

by the length of the shadow cast by a staff placed perpendicularly in the sunlight, by night the hour etc. fixed by the movement of the stars.

The agricultural products of Bahad are carried throughout the *amalat* of Ujjda along with those of the *land kassam*.

(C. HUART.)

DEDE AGHÂ, a report on the Aegean Sea in the wilâyet of Edirne and capital of the Sanjak of the same name. In recent years it has been connected by rail with Constantinople and Salonika, the *nomade* formerly of no importance, has increased considerably and now has 4000 inhabitants. The harbour is a fairly busy one and is increasing in prosperity. Cf. *Ali Dîvânî, Dîvânîsî Lâzîmî*, p. 386 et seq.

DEDE SULTÂN. A certain Dîrlikîzî Muğâs is known by this name, who played a part in a religious movement. Sultan Muhammad I. For further information see the article *muğâs*.

DEFTER (r.), from the Greek *dephos*, purchase, register, book; cf. Yale and Burnell, *Modern Turkey*, i. 7. *Defter*.

DEFTERDAR (r.), strictly "keeper of the register", was formerly the name applied in the Ottoman Empire to the superintendent of the finances and still applied to the director of the finances of each province (*vilâyet*). From the time of Muhammad II. there was only one defterdar, that of Rûmî, who had an assistant for

the Asiatic provinces; at a later period there were four of them. Selim I had instituted the third to control the finances of Egypt and Syria; the fourth was created by Süleiman I for Hungary and the provinces of the Danube. Under Selim III, the first was the minister of finance, the second administered the new taxes established under the name of *nişânîsî defter*; the third had charge of the virtuality of the capital *hukûmârî defter*. These officials were admitted on Tuesdays with the khans to audience of the Sultan; but they could only present reports which had been revised by the Grand Vizier and approved of by him. The first promulgatory on the Bosphorus on the European side is called *Defterdâr-Bâzîrâ* "Cape of the Controller of Finance".

Bibliography: Hammer, *Historie de l'Empire Ottoman*, ii. 312; do., *Geschichte der Welt*, *Herz*, p. 497 et seq.; Mûslim, *Târikh*, vii. 192, 261. (C. HUART.)

DEHÂS, explained by the *Hasâk* as driving out the "Ten Mills", the name of the river of Balkh called *Balkh* by the ancients (cf. Ptolemy, *Geographia*, ii. 2814) and now known as Balkh-âb, to which this town owes its favourable topographical situation (it must however be noted that the Ataks frequently mean the *Amu-Darya* by the *Nahr Balkh*). The Dehâs, which is rich in fish, rises in the Kôh-e Bihâ from the *Hamir*. After flowing through several natural pools and no entering in the plain south of Balkh is divided up into numerous channels, which irrigate the wide country around the town, in which the waters disappear without reaching the *Amu-Darya* (see *Yata, Northern Afghanistan*, p. 283). The supervision of the individual channels was in ancient times as even in the sixth century an important and remunerative task (see *Aristotle Journal*, xlii. 169). The example of the dike and its remains in the vicinity of the canal system. — For further literature see the article *YAKH*.

(R. HARTMANN.)

DEIR AL-ZÖR, the capital of the sanjak of Zör directly under the Sublime Porte; it is a charming, quite modern town on the right bank of the Euphrates with a government palace in the modern Greek style, three mosques, and two Catholic churches. It has also houses of vaulted masonry rebuilt in 1585 and about 2500 stone houses with streets 3 yards broad. It is surrounded by the gardens of the island of Hawâtze "grove" connected with the town by a bridge, to cross to the left bank of the river, a large boat called the *feriâ* is used. It has about 20,000 inhabitants, the great majority of whom are Sunnis. It is here that the date-palm begins to be cultivated (see the article *YAKH*).

DELHÊME (see *DELHÊME*).

DELHÊME (*Delhê* "Huma"). (See *DELHÊME*.) **DELI** (r.), "mad" or "wild", the name of a body of irregular troops formerly in the Turkish army, usually Bosnians or Albanians by birth and commanded by a Deli Hâshî. They often served as the Vizier's bodyguard. — The word *deli* also appears in Turkish personal names, e.g.

(ed. de Goije), *passim*; Yáñez, *Méjico* (ed. Wittenfeldt), i. 544, 553, 566 et seq.; Kuntz, *Kosmographie* (ed. Wittenfeldt), i. 82, 138 et seq.; 198; *Marábil al-Ístílah* (ed. Jynbull), i. 388, 408; v. 429, 432, 483; Le Strange, *The Lands of the East*, *Cataphacts* (1905), p. 371; R. Rüter, *Erdrunde*, viii. 10, 302—303, 350—351; K. Spiegel, *Erkenntnis der Erdkunde*, i. (M. STRICK.)

DENEB. (See JUANAB.)

DENDERA (the form **ANBAR** is also found) is a place in Upper Egypt on the left bank of the Nile, which now belongs to the district and province of Khéná. The name is derived from the Coptic Νήματα (Greek Τένια), Twisted, is celebrated for its temple of Hathor in which all sorts of legends have been attached, as usual in Arabic literature. While the city is said to have been founded by one of the daughters of the Copts (Abū Šālih) in the time of Manšūr or by Šāfurim b. Māzūm, the building of the temple is ascribed to the giants; a great wall is also said to have been made by them, which Abū Šālih had seen and minutely described. The spirit in whose protection the sanctuary was, had the form of a man with a two-headed lion's head. The images of Hathor etc. seem to have given rise to these ideas. Another wonder, the tree of 'Abīn, is also several times mentioned, the leaves of which closed when it was threatened to cut it down and opened again when it was told it was to be spared. In the Islamic period Dendera is known to have been the capital of a *šihra* (district) at quite an early date. Towards the end of the 11th century A. H., we have various testimonies to its prosperity and wealth in palm-trees. Ibn Dūmāh estimates its yield at 8000 dinars. Now it is a small town of no importance and according to Brunet Rey has 6129 inhabitants.

(E. GRANT.)

DENIA is the chief town in the north-eastern district of the Spanish province of Alicante, the most southerly of the three eastern provinces (Castellón de la Plana, Valencia, Alicante) which make up the ancient kingdom of Valencia, with 14,000 inhabitants, situated almost at the southern end of the Gulf of Valencia (Sinus Sarcotenus) north of Mungo (1596 feet high), in Arabic Iyebel Kīnā = Montigda, was on account of its good harbour, south-west of the national Promontorium Antemisia, Ferutium or Tenebrim (now called Cabo de S. Antonio, S. Maria or de la Nao) an ancient Phoenician settlement (from Massilia-Marcella or Emporium-Ampurias) founded in the 6th century B. C. and was first called τὴ 'ἡμερῶντινα (Strabo), Hēmerōscopium, "the watcher for the day", afterwards Antemisia from the famous temple of the Ephesian Artemis on the hill on which the town was built and since the Roman period Minimus (the town of Diana), whence the Arabic *Minya*, with Latin *Minya* and Spanish *Denia*. Although it was a Greek colony allied with the Romans it was spared by the Carthaginians; near it Cato defeated the Spaniards before 195 B. C. It was used by Sertorius, the liberator of Spain, as his last stronghold and station for his fleet; and it was most probably there that he was murdered in 73. Cæsar punished it as it was on the side of Pompey (Minimus Suspendarium). As a municipality however it attained considerable prosperity under Roman rule as excavations show. But it was under Arab rule that it reached its zenith (50,000 inhabitants) after the conquest by Ṭārik in 713 A. D., while nothing is known of it of the period of migrations and the Goths. It played a part in the struggle against 'Abd al-Rahmān I and later, but fell once after the extinction of the caliphate of Córdoba in 1013, when the 'Amirid al-Muwāḥḥid, a nominated slave of 'Abd al-Rahmān I. Manṣūr, named Abū 'Alīyah Muḥammad (q. v.) (Muḥammad, whence in western sources, Musett, Muset), seized Denia and the Balearic Islands (q. v., p. 617) (405—436 = 1014—1015—1016—1045), at first in alliance with the learned Ḥafṣ al-Mu'izz (1015—1030), and tried also to subdue Sardinia. His son 'Alī Ḥafṣ al-Mu'izz ruled over Denia from 436—463 = 1044—1045—1076, but was dethroned by the Ḥafṣid al-Mu'izz. Denia remained attached to the kingdom of Saragossa from 1076—1081 when it fell on the partition of this kingdom, with Lerida and Tortosa, to the second son Muḥammad of al-Mu'izz. In 1090 the son Salāmūn Sūd al-Mu'izz continued to reign under the regency of the Banu Hāshim till after 1092 when Denia was ruled by the governors of the Berber Almoravids and Almohads (with frequent rebellions and reconquests), who held it till in 1244 James I of Aragon's (Don Jaime I el Conquistador) German general Canos finally won it from the Muslims. In 1356 Denia was made a county by Pedro IV and a duchy by the Reyes Católicos (Ferdinand and Isabella). In 1690 through the expulsion of the Indian-born Moriscos by Philip III, Denia lost the greater part of its population

and therewith all its importance. As a fortified weapon it played a prominent part in the War of the Spanish Succession on the Archduke's side, was twice besieged by Philip V and taken in 1708. In 1812-1813 it was occupied by the French.

The most celebrated Arab scholar of Dania is the great reader of the Kor'an Abū 'Amr 'Othmān b. Sa'īd al-Danā [q. v., p. 912].

DENİZ (r.; East Turk. *deniz*), Sea. *Ār-rūdān*, the Black Sea; *Al-Danīz*, the Green Archipelago (also called *Al-faṣṣ al-danīz*) and in a wider sense the Mediterranean; it is also the name of a lake north of Antioch in the Wilāyat of Aleppo, which is called the Lake of Yağlız and *Amīyāḥ* (al-Amīy is the name of the district, — Abu 'l-Fidā, *Yaqūṭ*, p. 41 et seq.). *Al-faṣṣ al-danīz* "ocean of trees" is the name of a great forest with very thick foliage at Latakia (Nicomedia) in the northeast of the peninsula of Kōzja-İli.

Bibliography: 'Alī Mawṣil, *Diyaḥ al-Sayyāh*, p. 17, 34, 350; Sūnī Bay, *Ḥikma al-Ḥikma*, i, 262; v, 3223. (C. P. Saxeus.)

DENİZLİ, capital of the Sanjak of the same name in the province of Aidin (Smyrna) with a population of 2000 including 2000 Turkish-speaking Greeks in the sixteenth century supplanted Latins (cf. the *Annuaire de Cinnamus*, p. 25), the ancient Laodicea ad Lycum, the ruins of which still exist at Dēnizlī on the Çarşı, near the railway station of Gündül, 11 miles from Denizli. In the wars of the Komnenoi with the Seljuks (eleventh and twelfth centuries) Laodicea was repeatedly captured by the latter. Alaiş I occupied it for a brief period in 1098 (*Anna Comnena*, ed. Reifferscheidt, ii, 218 et seq.); John Komnenos captured it a second time in 1114 and fortified it (*Cinnamus*, p. 3; Nicetas, p. 17); in 1158 and again in 1189 the town was sacked by neighbouring Turkish tribes (*Cinnamus*, p. 198; Nicetas, p. 162 and 523), but continued in possession of the Byzantines, who strengthened the fortifications and made the inhabitants live within the city walls. In 1206 Theodore Lascaris was forced to cede the district of Laodicea and Chonai to Manuel Mawrozoxis, the father-in-law and vassal of Kai-Khosrow I (Nicetas, p. 24; cf. *Kurān al-Tawārīk* [sic] *à l'Histoire des Seldjouk*, ed. Ruyssers, iii, 66, 67 = iv, 28). On

the Tatar invasion (1255) however Kai-Khosrow I retook Laodicea to Michael Palaeologus, but the small Greek garrison were unable long to hold the city (*Akropol.*, p. 333 et seq.). Latins and Chonai became the seat of a *seigneurie* under the Sultans (*Kurān* etc. iv, 308, cf. 333).

When Ibn Battā visited Denizli in 732/1331-1332 after the collapse of the Seljuks empire, the town and its environs were in the possession of an independent prince, İzzat al-Dīn, *Ḥakīm* and *Ṣangulustū*, ii, 271; *Shihāb al-Dīn*, *Ḥakīm*, *Ḥakīm*, ix, 352, 358. Turkomen of the border tribes dwelled in the mountains around Denizli (Abu 'l-Fidā, *Maṣārif*, by Riquet, ii, 2, 334). It afterwards belonged to the kingdom of the Germiyanids of Kintaba and on the overthrow of these princes by Bayezid I was incorporated in the Ottoman Empire. Under sultan *Ḥakīm* came time at Denizli in the autumn of 1202 on his campaign against Annadā (cf. *Shihāb al-Dīn* and *Ḥakīm*, p. 27). The town which at the end of the sixteenth century contained 22 quarters with 7 mosques (*Ḥakīm*, p. 634, cf. Riquet, *Present State of the Grand Church*, p. 34 et seq., *Chamiller*, *Travels*, 2nd ed. p. 222) and in the reign of Bayezid II was the residence of one of his sons (Leonel, *Histoire*, p. 659), belonged to the Beylik of Anadolia and was surrounded by old fortifications; in 1114 (1702-1703) it was destroyed by an earthquake, by which 12,000 people lost their lives (*Rehla*, i, fol. 274b; Pococke, *Descriptive of the East*, ii, 2, 71, cf. *Chamiller*, *Travels*, i, 514); the population moved into the gardens and fields outside the ancient town; the description of the modern town in Caiput, iii, 613 et seq., and Fr. Saxe, *Reise in Kleinasien*, p. 10 et seq.

The name of the town was originally *Dangulustū* (cf. the *Ḥakīm* authors quoted above, *Rehla* p. 274b, *Caiput*, p. 43, inscription of Yağlız Germiyan in the *Annuaire de Cinnamus* de *Constantinople*, i, 118, Schallberger, ed. Langmannel, p. 53, *Leonel*, *Histoire*, p. 659, 684; *Temple* at *Turkey* [sic] *Shihāb al-Dīn*) and it was not till later an account of its repulsive meaning (*Ḥakīm* = *ḥakīm* "wise") that it was changed to *Dangulustū* *Denizli* (from *deniz*, *sea*).

(J. H. MORDTMANN).

DER [See DER.]

DERAJAT, the name of a tract lying between the River Indus to the E. and the Salatman Mountains to the W. which includes the modern districts of Dera Isma'il Khān and Dera Ghazi Khān. Until 1901 A. D. the Dera Division of the Punjab included these two districts, and also the District of Rawal, but on the formation of the N. W. Frontier Province of British India the Derajat Division ceased to exist. At present its northern part forms part of that province, while Dera Ghazi Khān remains part of the Punjab. The name *Derajat* is a supposed Persian plural of the Indian word *Dera* = fort or encampment, and means the 'Country of the Dera', that is of the three towns of Dera Isma'il Khān, Dera Ghazi Khān and Dera Faiz Khān, founded by Baluch leaders in the early part of the sixteenth century. (See *Annuaire*, p. 636). These three towns were all close to the River Indus, and have been liable to damage by its floods. Under the Sikh rule Dera Isma'il Khān was destroyed and the present town is modern, Dera Faiz Khān has disappeared

entirely, and Dera (Dera Khan has been almost all swept away in the years 1910 and 1911. The mints of Deradjat and Dera under the Durrani Kings were at Dera Ismail Khan and Dera Ghazi Khan respectively, and copper coins were struck at Dera Fakh Khan.

The district of Dera Ismail Khan has an area of 3493 sq.m. and a population of 252,379. In 1901 (of which 218,338 is Muhammadan). The main railway station of Dera Ismail Khan has a population of 51,737. The other principal towns are Tak (formerly under the independent Nawabs of Tak), and Kulachi. The Afghans form the most important element in the population, especially in the Mianwali and Mianwali part, and are numerous in the south. The mountain country of the Sherani Afghans is also attached to this district. (See also JAHAN, p. 901). Dera Ghazi Khan is a district of 5396 sq.m. not including the mountains occupied by Baluch tribes, and has a total population of 471,249, of which 412,013 are Muhammadan. The town of Dera Ghazi Khan had before its destruction a population of 23,721. Other important towns are Dera Ismail Khan and Mianwali. 167,322 of the population are Muhammadan.

Bibliography: Gazetteer of Dera Ismail Khan (Lahore); Gazetteer of Dera Ghazi Khan (Lahore); H. Edwards, *A Year on the Pamirs* (London 1849).

(H. LAKSHMINATH DAS).

DERBEND, usually written **DERBENT** by the Russians, called **AL-BILAH** (the "gate") **AL-BILAH** (gate of gates) or **AL-BILAH WA L-ANWILAH** (the gate and the gates) by the Arabs, a town in the Russian territory of Daghestan (q. v., p. 557) on the western shore of the Caspian Sea (42° 4' N. lat.), with about 70,000 inhabitants; it is particularly noted for the long walls, unique in their kind, which connect the passage between the mountains and the sea, here only 1½ miles wide, in the Caucasus and afterwards in the Muhammadan period protect the settled areas of western Asia from the incursions of the nomad peoples of Southern Russia.

Apart from the importance of the military and trade route via Derbend, the physical conditions also are here more favourable than anywhere else on the Caspian Sea; unlike the desert lands around Baku, the land here, down to the seashore, is fertile and exceedingly suitable for the cultivation of the vine and fruits. The district was therefore probably settled at a very early period. The agreement of the statements regarding the length of the sea in Herodotus (l. 603—604) eight days' rowing at the broadest part) and in Strabo (ed. de Goeje, p. 226 et seq.) "the narrowest part of the sea with a favourable wind in one week the whole breadth from Paktolus to Bala al-Abukh" leads one to suppose that even before the Christian era, as in the middle ages, the most important settlement on the west coast of the Caspian was near the modern Derbend. The Pass of Derbend probably formed the northern frontier of the ancient Alans which only became known to the Greco-Roman world after Pompey's campaign (64 B.C.). Even then the lands south of the pass suffered from nomad invasions (cf. Tacitus, *Annales*, 69, 15, 1, on the invasion of the Alans in the years 134-135 A.D.), but no mention is made of the erection of any fortifications in the Roman period.

Efforts were made for the defence of the pass were first taken by the Sarmatians, who had in the 1st century A.D. extended their influence to the Pass of Derbend and driven the Romans out of the country round. The Roman government was also to contribute to this purpose, at the Persian king's desire, for the widening of the narrow border was a vital question for both empires. We have no record in contemporary sources of the fulfilling of this request; only the Armenian Leond says that in 716 A.D. in the time of the Caliph Sulaiman, the Arabs found an inscription here in which the Emperor Marcian (450-457) is described as the builder of the city (Marquart, *Eranshahr*, p. 103). In any case a strong fortress was built here by Yazdegerd I. (438-457 A.D.), towards the end of his reign this was destroyed by rebellious Albanians, and the invasion of the Huns in 453 facilitated (Eliahe in Marquart, *Eranshahr*, p. 97). In local tradition (*Derbend-Namah*, ed. Kazem-Neg, p. 11) also Yazdegerd appears as the first king who cleared of sand and repaired the wall said to have been built here by Alexander the Great.

Khosrow Anushirwan (531-576) built a stronger fortress here. Of this we only have legendary accounts from the Arab period; but it is very probable that the great and costly building was actually necessitated by the dangers which threatened the Persian Empire from the north in the reign of this king. All the nomadic peoples from the Black Sea to the Chinese frontiers had just then been united into an empire which had entered into an alliance with the Romans against Persia; in the year 560 the Alans, the nearest neighbours of the Persians on the Caspian Sea, were still independent but by 576 the Turkish ruler was able to say to the Byzantine ambassador that he had recently subdued the Alans (*Pragm. Hist. Graec.*, iv. 229 et seq. and 246); the great nomad empire of the Turks had thus reached the Persian frontier. If the fortification of these happenings, the creation of these defences must date from the latter part of the reign of Khosrow. That the king himself came here and superintended the building operations in person, is probably a little worthy of credence as the later Muhammadan local tradition which records the Caliph Harun al-Rashid visit Derbend and spend seven years (180-187 = 796-803) there (*Derbend-Namah*, p. 108 et seq. and 140). Even Muhammadan tradition itself has preserved another story of the building of Derbend, according to which it was not the king himself but his governor Nasseh b. al-Muhallab, the ancestor of the Shirvanids, who built the town and its walls and his successors (Ghazir al-Din al-Mas'udi, ed. Hout, p. 38).

All that we know of the appearance of the walls, their style of architecture etc., only dates from the Arab period and must therefore be discussed later in this article. Accounts which can be directly traced to Persian reports of the pre-Muhammadan period are entirely wanting; we do not even know what the Sarmatians called the town and the fortress. On a basis of the Greek *Topography* and the Armenian *Eranshahr* (Marquart, p. 103) has proposed a Persian form *Derbend*. The word "Derbend" (Pers. "gate") is first mentioned in the *Geography* of Pseudo-Scylax (Strabo).

(transl. Patahanov, p. 38) which was not completed before the 11th, and possibly, as Marquart says, not till the 15th century A.D.

The Greeks and Armenians only tell us that the fortress, in spite of its strong walls, was captured by the Khazars allied with Heraklius in 627 A.D. (Theophanes, *Historia*, p. 484 and Mosa Kalankatani in Manandian, *Seidage on Albanian Geography*, p. 41, where the great city of Col with its marvellous walls is mentioned). The Arabs also had several times to fight for the possession of Derbent with the Khazars. The statements in the Arab sources regarding these wars, as on most of the campaigns of the first (7th) century, are in part embellished with legendary matter and in part quite factitious; even the account of the heroic death of Saladin b. Balis (22 = 643, and his 4000 warriors (Balakhori, ed. de Guicq., p. 493 et seq.; Vafsihi, ed. Houtsma, II, 192), whose tomb is still pointed out in the cemetery at the Kirkhar Gate, is in contradiction to Tabari's account, according to which it was not Saladin but his brother 'Abd al-Hakim who fell in this battle (I, 266n) while Saladin appears as late as the year 34 = 654-655 as governor of Derbent (I, 2928, 3). In any case it is only in quite modern times that the story has been introduced to Derbent; in the middle ages the tomb of Saladin was pointed out in the northern part of the modern Daghestan at Balakhar: as late as 1638, Adam Olearius (*Reise*, p. 721 et seq.) heard another story about the tombstones at the Kirkhar gate.

The real founder of Arab rule in Derbent was Maslama b. 'Abd al-Malik, who is also told by the Armenian Mosa Kalankatani (transl. Patahanov, p. 267) to have rebuilt Derbent in the name of the Tenth (Arabic). According to Tabari these building operations were carried out in 115 = 733-734; in the original Arabic (II, 1562) they are only briefly mentioned (as also is the case in the al-Akhbar, c. 134), while in the Persian edition by Bal'ami, on the other hand, they are minutely described (cf. Horn, *Beiträge zur Geschichte der kaukasischen Länder und Völker*, 1911, 2), as well as (with some variations) in Balakhori, p. 207 et seq. Maslama is said to have marshalled 24,000 of the Syrian troops here; according to Bal'ami these Arabs belonged to Khuzestan, Haman, Kufa and al-Basra, and the town was divided into four parts corresponding to these towns; this division was still in existence in the time of Bal'ami (on his authority). Three depots (Amr) were erected for the requirements of these troops, one for victuals, the second for barley (as fodder for the horses) and the third for weapons.

In spite of all these measures Derbent fell for a brief period again into the hands of the Khazars in 183 (799) in the reign of Marwan al-Rasid; from there they ravaged the land as far as Kora and carried off a large number of prisoners. According to the Arab sources (Vafsihi, II, 518; Tabari, III, 648; and the *Derbent-Namah*, p. 232 et seq.) the enemy was nicknamed by Halyth b. Naufin (or al-Munawwijin) al-Salam, the son of a governor of Derbent who had been executed as a rebel.

During the centuries following Derbent seems to have enjoyed great importance as a harbour on the Caspian Sea and also as the farthest out-

post of the Mohammedan world. The city was then larger than Ardabil or Tiflis (Ispahani, p. 184 et seq.) and was a mile in length and in breadth so that it was not limited to the long narrow strip (nowhere as much as 200 yards in breadth from north to south) between the two stone walls, which it has occupied since the 11th (11th) century. This is also confirmed by Ispahani's statement that in addition to the stone walls there were others of brick and mud, these walls apparently surrounded those parts of the city which lay outside the stone walls (naturally to the south, as the stone walls were erected as a defence against enemies from the north. The stone walls were 300 cubits (Ispahani, transl. al-Fayli, p. 285; Kadhama, p. 260; Vafsi, I, 440; Zakariya Khamisi, II, 441; wrongly translated by de Guicq. in *Hist. Geogr. Arab.*, VI, 201; tens of cubits de Guicq.; this figure obviously only refer to the space between the two walls. The Sassanids had built these walls of blocks of stone 550 feet; how the one material was joined to the other, we are only told by Shakhaddad (p. 380); the lead was used as mortar (milt). According to Hisham al-Fakhri (ed. Ammelen, p. 217 et seq.) there were two holes in each block of stone and an iron bar (qasid) in each hole with molten lead. It was apparently the same style of building that Tabari (I, 2492) says the Sassanid architect to King Shuraw Faris had taught the Arabs in Sufa. The stones were brought from the mountains of Mawra (Khazistan), pierced and filled with lead and iron bolts (milt). Such holes can still be seen in blocks that have fallen from the walls of Derbent but there has for long been no trace of lead or iron.

According to Shakhaddad (p. 376) the walls had towers, in which mosques and watch-towers (mirdas and jarras) were built. There were only two gateways to the north in the last of the Khazars, i. e. in the modern north wall, a large (al-Bab al-Kabir) and a small (al-Bab al-Saghir), with a third which was kept closed not far from the Sea. These gates are called Bab al-Qasid and Bab al-Saghir in the al-Fakhri (p. 291 et seq.); the figures of lions mentioned by the al-Fayli have survived to the present day on the gates referred to, now called Kirkhar and Tash-Kapi; the Kirkhar gate is mentioned in the 11th = 12th century by the name Bab al-Qasid. Similar figures may also be seen on the "middle" gate (Orta-Kapi) of the south wall; on it there is also a Kufic inscription dated Raddih 435 (3rd February—3rd March 1044). Neither gate nor the other gates of the south wall are mentioned by the medieval geographers. Shakhaddad only says that there were a "number of gates" in Derbent facing the sea and the land of Islam.

The houses of the town were as they still are built of stone. The only individual building described by Shakhaddad is the chief mosque of which he gives a brief account; it stood on the centre of the market-place (safa-karshah); beside it was a spring or fountain (safa). According to local tradition the chief mosque is at the present day on the same site on which it was built by Maslama (or Abu Muslim) in this confusion of the article *UNIVERSITY*, p. 289) in 115 (734). In the 11th (12th) century there was an inscription (transl. Hisham al-Fakhri = work of the master Tadj al-Far) with the date 770 = 1368-1369.

The name of the architect ~~has~~ since disappeared; the modern (first mentioned in the fortification of the 17th century) inscription is written partly in Arabic (the alleged foundation of the tower in 115, with blessings on Mahammad and his family) and partly in Persian; the second part is: *afshar-i mawaddat dar bostan-e bostan-i imarat dar afshar-e s. Tahsin-i bagh-ei khat-i islah* ("the mosque collapsed in 770 and was rebuilt by Afshar b. Tahsin with help of the Most High God"). The Afshar mentioned here (probably an error for Afshara; he was apparently a prince of Derbent or Shirvan) is not mentioned in any historical works that have as yet come to light.

It remains to be ascertained ~~whether~~ the whole building was actually destroyed in 770 (1363-1369) (probably by an earthquake) and entirely rebuilt. The central nave (the entrance is on the north side) with its two massive cupolas seems to belong to a later period than the two side galleries, each of which is divided into ten parts by a row of stone pillars; a small arch is supported by each pillar; these arches like the cupolas are not of stone but brick. The internal stucco of the mosque in their present form are quite modern. As Huseyni (*Derbent*, I, 256) tells us, Nakhshibani took possession of the building which was still in the early decades of the 17th century a monastery of Islam, for ascetic purposes and used it as a storehouse; it did not therefore revert to its original purpose as a mosque before the middle of the 17th century.

Unlike the modern town, the Derbent of the 17th century had no citadel; the space between the two stone walls, to which the city itself was afterwards limited, probably sufficed for the garrison. There was a pile of wood constantly replenished on the "Mih-i Tawil" hill ~~across~~ the town, probably where the citadel now is, which was set on fire on the approach of an enemy to inform the people of the border provinces of the danger threatening.

The walls built by Khusrav Anushirvan were not only to bar the Pass itself, but the adjoining mountain ravines also, by passing through which the fortress might be avoided. The walls are therefore said to have been built up ~~in~~ highest mountain tops. The distance between the shores of the Caspian and the end of the walls is variously given; according to Ibn al-Fakih (p. 291) it was *4 farasakh* (1 f. = 4 miles), to Haxeia Isfahani (ed. Gortzsch, p. 57) *20 farasakh*, while Mas'udi (*Muruj*, II, 2) says it was *40 farasakh*. Traces of these long ~~walls~~ have been seen by recent travellers also, but it has never been definitely ascertained how far to the west such traces are known to exist. Even at the present day one may be told in Derbent that ~~the~~ wall built by Khusrav Anushirvan stretched to the Black Sea or even to Constantinople.

To secure the fortress from attack from the sea also, Khusrav is said to have extended the wall not only down to the shore but also some distance further. As to how this building was executed we possess two different accounts, one in Khatima (p. 200-201) and another in Mas'udi (*Muruj*, II, 2) (p. 56-57), but it is clear that neither can claim to be in the slightest degree reliable; both only show how later generations sought to explain how this wall was built. We only have contradictory statements as to how far these constructions were carried out from the shore, the Rusa (ed.

de Goeje, p. 128) and Khatima say 3 miles; according to Mas'udi (*Muruj*, II, 2) it was only one, according to Hamid Allah Kasani, $\frac{1}{2}$ mile, to Haxeia Isfahani ~~two~~ $\frac{1}{2}$ mile, while the Persian translation of Isfahani (ed. de Goeje, p. 128, note 2) says it was 8 towers. We should probably be right in taking the two last statements as accurate; as the distance between each tower is little more than 100 fathoms, the amount in the Persian version of Isfahani practically agrees with that of Haxeia.

In any case it is clear that Derbent then instead of the present open and dangerous strand had a harbour protected alike from hostile attacks and the tempests of the Caspian. Only a small entrance was left for ships, which in case of need could be closed by a chain with a lock (*Shah al-Huff*); no ship could enter or leave without the permission of the keeper of the lock (*Shah al-Huff*) (Haxeia Isfahani, p. 232). This explains why Derbent was not affected by the Russian mile in the 17th-18th century.

For the same reason the harbour of Derbent was then of much greater commercial importance than now. Goods were brought to Derbent from all the Muhammedan and non-Muhammedan lands of the Caspian Sea. The most important articles exported were linen goods (these were to be obtained nowhere else, neither in Asia, nor Armenia, nor in Adramutidjan) and madder; the principal imports were slaves from the "lands of the unbelievers" (*Yusuf*, p. 184).

Thus in practically all we know of Derbent in the period of its glory. It is more difficult to get a clear idea of its political conditions, particularly of its relations to Baghdad. Haxeia Isfahani's statement (p. 207) that in his time no new governor was allowed to enter Derbent till he had divided a sum of money among the inhabitants is significant. The *Derbent-Namak* (p. 134) even says that Harun al-Rashid granted the people of Derbent the right to depose a governor appointed by the Caliph, if he had been negligent in punishing the *ghilman* or treated his subjects anxiously. The descendants of a certain Agghah al-Sulami are said to have been invested with the right of governing the town (1) the arrival of the new governor, when a governor died or was dismissed. This is probably much exaggerated but as a matter of fact history does know of a considerable number of prince and governors of Arran and Derbent of the Sulami family, from Urosh b. Zayn, the contemporary of the Caliph Hisham, to Sad al-Din Muhammad b. Khulifi mentioned by the traveller Abu Hamid Andalus (in *Doni, Millesimo Anatolico*, vi. 702) in the 11th-12th century (cf. also the above quoted accounts of the rising in the year 183 = 790).

In Yaqut, Ibn al-Athir and later writers, the town is frequently called "the land of Shirvan" and actually seems to have usually belonged to the kingdom of the Shirvanshahs from the 10th (2nd) century; but there were at times also rulers in Derbent independent of the Shirvanshahs (cf. the article *SHIRVAN*, p. 460-461). The people of Derbent under the Caliph, as well as under Yūsuf b. Ali 'I-Sadi, ruler of Adramutidjan (368-375 = 901-927), had not to pay taxes but only give presents, like the people of the frontier countries in general as defenders of the faith; it was not till the time of Marzuban Salār b. Mahammad that these presents were replaced by a fixed tribute.

the *Itinéraire* (p. 254) gives the tribute for the year 144 (955-956). Naturally the inhabitants were not pleased with this change; this probably explains why Abu al-A'ali, viz. 376) Marashan Sultan had to suppress a rising in Derbend in the same year (344).

At a later period also Derbend appears as a practically independent frontier town, which only applied to the central government for help in time of danger. According to Ibn al-A'ali (p. 434), for example, the help of Sultan Mahmud b. Muhammad was sought by the people of the frontier lands, particularly of Derbend, against the Georgians and Kipchaks and he therefore undertook a campaign in these lands in the year 317 = 1123.

It is important to note a fact to which little attention has hitherto been paid, viz., that Derbend was lost to the Muhammadans for a period in the 11th = 12th century and was only regained by them with the help of the Georgians. This is clear from a *fatwa* of the poet Khakani given by Khanklow (*Mingos Samaghi*, ii. 137 ff. 137-138); the poet praises the Shirvanshah Vahid b. Mansur who destroyed a Russian fleet of seventy sail at Baku, conquered the Shirs and Alans, "made Derbend a hell and stirred lamentations in Shabran"; he adds "the Shirvanshah today wrought the same confusion in Derbend and among the Russians as those men with dogs' hearts had previously wrought in Shirvan, Derbend and Shabran have been won by his sword with God's help".

These words show that not only Derbend but also Shabran which lay much farther to the north at the modern Kala, had for a period been taken from the Muhammadans. As Kanki (quoted by Horn, *Caspia*, p. 304 and introduction p. xxvii), has shown, the victories of the Shirvanshah celebrated by Khakani were placed about the years 1175. The annals of Georgia mention the conquest of Shabran by Georgian III. (1156-1184), King of Georgia, who is said to have given the town to his ally, the Shirvanshah. It was probably still later, in the time of the Georgian queen Tamara (1184-1213) who extended her rule to Caspian Sea, that Derbend came into the possession of the Shirvanshah.

In Abu al-A'ali's account (ii. 232, 264 et seq.) the first appearance of the Mongols (619-620 = 1221-1222) the Mongols is mentioned as the ruler of Derbend; the Mongols were shown a way by the army of the Shirvanshah, by which they could avoid the fortress: the town was therefore spared by the Mongols on this occasion (the long walls of the town had apparently long lost their importance). A few years later Nasir (cf. Houdas, p. 179 et seq.) mentions a separate principality independent of the Shirvanshah; Shah Abidin was the ruler of Derbend, while the prince of Shirvan was a minor, on whose behalf al-A'ad managed the government. The town was even then regarded as an impregnable fortress, which could only be taken by treachery; nevertheless after the retreat of the Mongols and still under Rashid the Kipchaks succeeded in capturing the town and taking it for a short time. Derbend had to surrender to the Mongols in 1239. From the *Journal* of William of Rubruck, who spent a day (17th-18th November 1254), it is clear that the Mongols had destroyed the upper parts of towers and the

battlements of the walls. He is also the first to mention the citadel. The town itself was more than a French mile long and only a narrow throw road, that is to say, it was by this throw road to the space between the two stone walls (cf. F. Schmidt, *Die Aserbaidschaner*, Berlin 1885, p. 34). After this period, this disproportion between the length and breadth of the town is emphasized in all descriptions of Derbend, Zakariya Qazvini (cf. Wartenfeldt, ii. 340) is the first Arab to mention that the town is 2½ farsangs long and only an arrowshot broad in contrast to the account of Vahid and the geographers of the 11th (12th) century.

In the period of Mongol suzerainty, Derbend appears to have belonged sometimes to the Shirvanshah and sometimes to princes of its own, the khans of the Golden Horde are sometimes mentioned as holders of the land and sometimes the Mongol Ilkhans of Persia. Timor's opponent, Tughlugh, struck down in his name here; Timor himself passed through Derbend on his campaign against Tughlugh (797 = 1395) as well as on his return from this campaign (798 = 1396); the frontier fortress of the empire founded by Timor, Derbend was again as before entrusted to the Shirvanshah. In 1428 an independent prince of Derbend is mentioned; the Italian merchant Giovanni della Valle built a small ship for this prince, with which he made piratical attacks on the ships coming from Adenahel (Ramusio, *Viaggi*, ii. 92).

The town appears in this century to have finally lost its earlier importance as a seaport. When Ambrosio Contarini was here (November 1475-April 1476), only the citadel and the port of the town adjacent to it, about a sixth of the area between the walls, were occupied, the other parts of the town down to the shore being quite desolate (Ramusio, *Viaggi*, ii. 120). Apart from the damage done by earlier raids and the frontier wars the decline of Derbend must probably also be connected with the rise of Baku (q. v. p. 669). Apparently the petty local princes did not have sufficient means at their disposal to maintain the barracks described by the geographers of the 11th-12th century; when these fell into disrepair, trading vessels had naturally to go to the more harbour of Baku in preference to the open roadstead of Derbend.

About this time Derbend began to be described no longer as an Arab but as a Turkish town; an anonymous Venetian merchant at the beginning of the 15th century says that the inhabitants spoke "Circassian or Turkish" (Ramusio, *Viaggi*, ii. 86). We have no information as to when and how the Arab population became supplanted by Turkish immigrants. This development is probably connected with the gradual Turkization of Ashkharaidjan and the other frontier provinces of northwestern Persia after the period of the Seljuks, the name of the above mentioned Salt al-Din al-Sulami proves that in the Derbend of the 15th (16th) century the Arabs and not the Turks still had the upper hand. Not only the Mongol (Khalifa, on this word cf. the article *MAI-KHANA* above p. 929), but also the Turkish name of the pass (Yeni-Kapi = New Gate) appears for the first time in the Mongol period; it cannot be definitely ascertained when the Turkish folk-legend mentioned in Olearius (*Reise*, p. 721 et

177) became localised in Derbent; but the same legends are only mentioned by Olearov's contemporaries Kalya Çelebi (*Şeyhül-Nazar*, ii, 312). Legends of the "Tomb of the Oguz" were still to be heard in Karaim's time (about 1732) in Derbent; Turkish folk-legends have since been supplanted by legends of religious origin. At the present day no one in Derbent knows anything of Khatun Khatun, nor of the patriarch and singer Karaim, nor of the Oguz tribe.

In 896 (1483) Derbent was unsuccessfully besieged by Shakh-Raidar, Shakh-Raidar fell in battle against the Turkomans of the White Sheep (Ak-Koyunlu) who were called in by the Shirvanshah. In 915 (1509) however, Isma'il Shakh-Isma'il, the founder of the Safawi dynasty, succeeded in conquering both Derbent and Shirvan. The siege of Derbent is described in *Mustafavi* (most fully by Khoudendrar, *Yadid al-Siyar*, Tehran edition, iii, 350 et seq.) and Venetian *Stamulo*, (*Stamulo*, ii, 73 et seq., 90 et seq.) sources. The town itself was abandoned by its inhabitants on the approach of the Persian army, 40,000 strong, the citadel, whose towers had shortly before been captured, was only taken after a stubborn resistance by its garrison.

Little is known of Derbent in the Safawi period. The Sultan of Derbent appointed by Isma'il Shakh was subject to the Khan of Shirvan. In 986 (1578) Iskender 'Oghuzan Pasha succeeded in taking the town. Derbent remained under Turkish rule till 1015 = 1606. It is probably in this period that the description of the town given by Abdül Khatib in his *Diwan-Nava* (p. 394 et seq.) belongs. Derbent was then 10,300 ell long and 550 broad; the walls with their 70 towers were as high as those of Constantinople on the land side.

After the restoration of Persian suzerainty, Shakh 'Abbas repaired the walls. When it was seen that the shallowness of the sea here allowed easy access to avoid the town which was an important customs station, a high stone wall was built in the midst of the sea and connected with the walls of the mainland; when this was being built, remains of similar erections from an earlier period (large blocks of stone with iron clamps, *mitlak* *shah*) were found (Iskender Khosh, *Tarikh-i Namah* 1871, Tehran edition, p. 316). The building erected by Shakh 'Abbas was only able to resist the waves of the Caspian Sea for a brief period: the Russian admiral Fedot Kotov (1623) appears to have been the only traveller to see the tower in the water; even Olearov (1833) only says that the city walls ran from the mountains to the sea, so that the waves sometimes dash up against them. The same Shakh had the sea-wall connected by cross walls, which separated the citadel from the town proper and kept it from the district to the east as far as the sea. This deserted area was then known as Shakh-i Vamân (city of the Greeks); some travellers have taken this to mean that the Turkish conquerors found a city of Greek merchants here; as a matter of fact the name is to be referred to the legends of Alexander the Great. The cross walls were destroyed in 1624 by the Russians.

After being taken on the 23rd August = 3rd September 1722 by Peter the Great and made a Russian fortress (the house in which Peter lived is still pointed out), Derbent was again given

back to the Persians in 1735. Like Peter the Great, Nadir Shah wished to restore the town to its ancient importance as a seaport; the deserted quarters on the sea shore were again to be enclosed to encourage the people by his example, the Shah ordered a palace to be built for himself there; but these buildings were never carried out or else no trace has survived of them.

After the death of Nadir Shah and the collapse of the Persian Empire, Derbent again appears as a practically independent principality. In 1765 the town passed into the possession of Fath 'Ali Khan of Kuba, who moved his capital to Derbent and had a palace built for himself in the citadel; this palace which is described by contemporary writers as a most splendid building has now disappeared except for a few insignificant remains. Fath 'Ali ruled till 1789; in the reign of his son Shakh 'Ali, who allied himself with the founder of the Kajar dynasty, Derbent was taken by the Russians under Zubov on the 21st (10th) May 1786, situated towards the end of the same year, occupied a second time on the 1st July (21st June) 1806 by General Gerasimov, whereupon the inhabitants three days later took the oath of fealty to the Russian Emperor.

Under Russian rule Derbent has quite lost its former military importance. Although it did not finally cease to be a fortress till 1867, the proposal to erect fortifications here suited to the requirements of modern warfare was abandoned in the early years after the conquest. The old walls are now only maintained as memorials of the past; individual portions of them, particularly on the south, have had to be sacrificed to the development of the town. Not less the proposal several times made (last in 1903) to make the mouth of Derbent a serious harbour by again building breakwaters, ever been carried out. Of the industries mentioned by medieval geographers only the growing of mulberry has been revived under Russian rule; but the demand for this article has been considerably diminished since the invention of artificial silk in 1875, which has brought about an economic crisis for the population of the district.

The ancient fortress is now a peaceful city of Muscovites (about 52%), Russians (18%), Jews (10%), and Armenians (20%) who live chiefly by growing fruit and the vine, and by fishing. The old wall over the Pass of Derbent has been supplanted by the railway, completed in 1898, the only one which connects the provinces across the Caucasus with Russia in Kotoko, whereby the development of the town has naturally been advanced.

Historical Notes: The *Darbent-Namah* composed in Turkish by Muhammad Awrah Akkash about the end of the 17th or beginning of the 18th century based on a lost Persian work goes only up to the year 956 (1064). The work which has been known since Peter the Great's campaign exists in several MSS., critical edition has yet been published; the edition of the text prepared by Kasim Beg with English translation and notes (*Darbent-Namah, or the History of Derbent, translated from a rare Turkish version and published with the text and notes by Mirza A. Kasim-Beg*, St. Petersburg 1851) does not quite meet the needs of modern scholarship. The author of the *Darbent-Namah* had reliable sources at his disposal but

and gave them in his *sunna* (system) suitable rules of conduct, a kind of law which secured unity of doctrine among them. The *Derghawa* or "brothers" of the guild who were henceforth known by the name of *Derghawa* (i. e. followers of *Derghwa*) multiplied on all sides. They may be recognised by the staff on which they lean in imitation of the prophet Moses, by the neckties of large wooden beads, which they wear in imitation of *Abd Hudaib*, the companion of the prophet Muhammad; by the beard generally worn long, and by their garments of rag (among the more fanatical) in imitation of *Abd Israh* and of *'Umar b. al-Khattab* which secured them the ambrogium of *Abd Dergha* (wearer of rag). Some, especially in Southern Morocco, have adopted green turbans. Their *Shahih* had further recommended them to celebrate the praises of God in dancing (*rags*), to pray alone or in the desert, to walk with bare feet or with simple shoes, to endure hunger, to mortify themselves frequently by fasting, to avoid the society of *Dergha* in authority and only to consort with men of piety.

Beside these ascetic practices the actual initiation is simple. The *Shahih* takes the initiate by the right hand and reads the following verse of the *Qur'an* (*Sura*, vii, 93): "Be faithful to your covenant with God which ye have concluded with him; and violate not the *Dergha* which ye have solemnly taken. You have taken God as a witness and he knows what ye do." The *Shahih* then orders him to recite a hundred times in the morning and in the evening the prayer called *Salah*; at follows: "I testify that there is no god but God, the One only, who has no associates, in Him is the dominion and the praise, He is powerful above all." The initiate has to conclude his prayer by saying a hundred times, "There is no god but God etc." Such is the *Shahih* (q. v.) or prayer peculiar to the order and compulsory. After initiation, the brothers frequent *zawia* in *Fez*, a place assembly in honour of the new *Dergha*, interspersed with songs and *rags* (dances), a kind of rhythmic march.

Their political rôle: *Mulay 'I-Ach'* action was greatly encouraged by the *Sultan* of Morocco, *Mulay Sliman*, who had adopted a policy of harmony with the religious elements and the *Sharifs*. The *Sultan* corresponded directly with the *Shahih* of the new *Fez*. It soon became the fashion at the Moroccan court to be connected with the new brotherhood. Its members were soon to be found throughout its length and breadth of Morocco; the lands in the west and the Regency of Algiers were also covered by its ramifications, which formed a bulwark for the policy of the *Sultan* of Morocco.

Local tradition records the first disputes between Turks and *Dergha*, in the province of Oran, to the difference between the Marabout *Dergha* *Muhammad* b. 'Ali of 'Ain al-Jad, near Tlemcen, and the Bey *Abd al-Khalil*, a dispute which was only terminated by the death of the latter (1195 = 1780). The historians however do not mention disputes arising before the beginning of the sixteenth century.

The Turks of the Regency of Algiers had supported the rebellion of the Rif; *Mulay Sliman*, *Sultan* of Morocco, in his turn gave asylum to the Marabouts who had had a dispute with the Turks. Suddenly in 1803 at the call of the Moroccan

Dergha *Shahih*, *al-Mulay Muhammad b. al-'Achi*, announced *Ud Dali*, the Algerian Kabyle of the *Barbar* district rose under the leadership of their chief *Zahid*. After some minor successes, the *Dergha* were impudent enough to attack the Turkish stronghold of Constantine; they were defeated and the *Dali* wounded had to flee. But in the following year, the rebels, having surprised *'Uthman Bey* of Constantine's army in the ravines of the lower *Hamud* valley, massacred it including the Bey. The Turks were obliged to send new forces to Constantine under the command of the *Shey* *'Abd al-Khalil*. In January 1808 the latter defeated *Ud Dali* and his allies; then towards February 1808, with the help of the *Mahdists*, sons of the *Maghrib* and fanatics of the Turks, he repulsed the *Dergha* forces on the west in the high *Matana* in the south of Great Kabylie. There also the Turks had to put down rebels. The title of *Ud Dali* rebelled and closely besieged *Medea* after having taken by assault the Turkish fort of *Sar al-Qadim*, now called *Aunala*.

While *Ud Dali* was ravaging the east of the Regency of Algiers with fire and sword, a certain *'Abd al-Khalil b. Sharif*, the chief *Mahdista* (spiritual lieutenant) of *Mulay 'I-Ach'* *al-Dergha*, hurried through the province of Tlemcen, everywhere announcing the immediate expulsion of the Turks from the lands of Northern Africa. By 1808 all the country from *Bghat* in the Moroccan frontier soon in revolt, *Mulay*, Bey of Oran, taken by surprise in his camp at *Ain Fortea*, was forced to take to flight and seek which behind the walls of Oran, the gates of which he called up. At the same time the *Dergha*, in compliance with the Moors of Tlemcen, blockaded the Turks of this latter town in their fortress called the *Mashur* and took the oath of fealty to *Mulay Sliman*, *Sultan* of Morocco.

The insurrection fomented by the *Dergha* rapidly gained ground; the Bey of Algiers recalled the Bey *Mulay* and appointed as his successor *Muhammad al-Mahdista*. The latter at once began operations against the insurgents. *B. Sharif* was intercepted on his march by various tribes and driven back to the east. A fortunate stroke regained the town of Mascara for the Bey *Muhammad*, whose prisoners included the family of his opponent. The latter had retired with his supporters to the *Zawiya* of *Muhammad b. 'Awla*. He suffered a crushing defeat. The heads of his followers were cut off and according to the local chronicles thrown at the feet of the Bey "like so many onions" (1807). Another victory at *Suk al-Aghal* in the land of the *Riad* *'Amir*, where 600 more *Dergha* lost their heads, allowed the Bey to proceed to relieve Tlemcen, punish the rebels and restore this town to Turkish authority. But while the Algerian troops were occupied in the east, the centre and west of the Regency, *Mulay Sliman* conquered *Agadir* in 1805, *Gharm* and *Tut* in 1808. He took from the Turks the whole of the south-east of the Oran territory. The *Dawla* of Algiers resented the importance which his successes had given the Bey *Muhammad al-Mahdista*. The latter was suddenly arrested on some ridiculous pretext, then imprisoned and arraigned. *Mulay*, the previous Bey of Oran, took his place and again proved incapable of holding his own against the *Dergha*. A year later the

Dey of Algiers had to replace him by the Bey **Abd al-Kadir** (1803-1809). The latter gave the Derkawa no rest. **Abd al-Kadir b. Sharrif**, who had again begun his exploits against the Turkish governor, was driven back southwards by the new Bey towards 'Am Mahiri and tried to find refuge there. Not being able to reach it he secretly retraced his steps and took refuge among the **Sa'ad Sa'ad**. There with the help of his uncle-in-law **Abd al-Tarfa**, he raised the people of **Oran-Morocco** frontier, notably the **Taras**. The Bey marched against the latter, defeated them, but while retreating his column was overwhelmed by snow and he had to retreat hastily with his army in confusion. He was afterwards recalled to **Oran**, deposed and decapitated.

All the northern **Oran** territory then was in rebellion. An energetic officer, **Abd Karabaghli**, working in conjunction with the Turks, shut himself up in **Marina** and held out against the insurgents while **Amir Aglia**, the Bey's envoy, went to deliver the garrisons of **Nedroma** on the frontier. **Abd Karabaghli** was appointed Bey and the two leaders marched with their forces through the districts of **Tlemcen** and **Taras** to impress the inhabitants and keep them under control.

Peace was maintained for some time in the west of the Regency. But in 1816, during the bombardment of Algiers by the English, **Abd al-Kadir b. Sharrif** reappeared, raised the **Aghrs** on the frontier and marched against the Turks. The Bey scattered his forces and **Abd al-Kadir** retreated to **Pignig**.

The Sultan of Morocco however was not long in recalling the influence of **Mulay T-Arbi al-Derkawi** and his followers. He suspected or accused him of abetting the rebels in his kingdom and threw him into prison. **Mulay T-Arbi** regained his freedom on the death of Sultan **Mulay Shamin** in 1821. Hereafter the Derkawa no longer seems to play the principal part in the military policy against the Turks. They were to remain this role up to the French conquest.

In 1834 the Derkawi **Si Mula** raised the **Ulad Nall** and led them on a holy war against the Christians. He occupied **Medea** but was defeated in 1835 by **Amir Abd al-Kadir** whose plans he had upset. He reappeared at a later period in the insurrection of **Zaatcha** in which he was killed.

Ten years later in 1843, the **Muhammad Derkawi** **Si Abd al-Karim al-Tu** assisted by about thirty of his followers, all of the **Ulad** of the **Ulad** **Amir**, tried to surprise the **Ulad** of **Sidi Bel Abd** but the **Ulad** garrison defended itself bravely and repelled it. **Si Mula** who was almost all slain.

This feat **Si Mula** marked the end of the heroic period of the Derkawa, at least in Algerian territory. The **Zawiya** of the order had given evidence of their **Ulad** and uncompromising creed, they had thus justified their existence in the eyes of a fanatical people. Once firmly established, accepted by the masses, with branches throughout the country, they limited themselves to increasing the revenues which supported the mother **Zawiya**. Outwardly at least they have submitted to authority. This is a kind of law from the operation of which **Ulad** brotherhood escapes. At the time of the insurrections in South **Oran** in 1864 and 1884, no chief of this brotherhood took part openly against the French. And again during the

rising of **Margherite al Milla** in 1848, which was caused by an attempt **Derkawi**, the chief of the Derkawa of the district, **Si Ghulian Allah** and his whole influence to calm the turbulent spirit. **Muhammad** would **Muhammad**, the **Muhammad** of the brotherhood among the **Hamayan** of the provinces on the west Algerian frontier and his successors have always faithfully followed the instructions of the French authorities. The **Muhammad** of the Derkawa of **Oran**, **Kadjar b. Shamin**, also confined himself to spiritual activity and recommended his **Khwan** to submit to the government authorities.

In opposition to the Algerian Derkawi those of East Morocco waged a constant war against the French authorities up to the occupation of the **Algero-Moroccan** hinterland in 1907. The occupation of **Am Sufin** 1851 brought them into immediate contact with the French. The **Sharrif** **Si Muhammad al-Hashimi b. al-Arbi**, the head of the **Zawiya** of **Sa'ad** in the **Madaghat** country, the most important **Zawiya** in Morocco next to that of **Abd Karbi**, preached a holy war against the Christians; but his advanced years (he was over 80) did not allow him to take effective action in person. The same thing happened in 1855 on the occupation of **Ughat** b. **Karbi**. In 1857 their resentment was turned against the Moroccan government which was accused of having come to terms with the Christians. The death of their aged leader in February 1863 brought confusion into the Derkawa order of the south. **Si Muhammad b. al-Arbi** had appointed as his successor **Si al-Arbi b. al-Hawari**, head of the **Zawiya** of **Fekla**, acting solely for the best interests of the brotherhood. But his sons would not agree to this arrangement; they founded their **Zawiya** in opposition to those of their father's successor while a certain number of **Sharrif**, at the head of other Derkawi communities sought to promote further concessions from the brotherhood for their own advantage. These schisms along with the independent spirit of the Berbers rendered the hostility of the Derkawa groups to the south to the French advance, which took advantage of the dissensions of the rival groups, largely ineffective. Then a certain **Ali** would **Khadi**, of the **Ulad** tribe of **Am Aita**, organised against the French the attacks at **Mezra** and **Tinim**. At the same time, another reigned supreme in **Tahala**; a number of Derkawi of the district formed a **Ulad** or band, called **Tafiat al-Ulad** (from the **Ulad** of the founder) representing the most violent school of opposition to established authority.

To meet this agitation and the threatening plans of France to the east, the principal **Muhammad**, wishing to be free from the state of uncertainty in which they found themselves, and to decide on a uniform plan of action, decided to appoint a **Sharrif**, who would have supreme guidance of the brotherhood. The assembly of delegates from the **Zawiya** in September 1901 elected **Muhammad b. Ahmad**, superior of the **Zawiya** of **Sa'ad**. This population was generally well received. Although in **Madaghat** the sons of **Si Muhammad al-Hashimi b. al-Arbi** hastened to accept him, **Si T-Arbi b. al-Hawari**, on the other hand, declined to recognise his authority. The agitation in the southeast of Morocco has since diminished, supported by the innumerable **Sharrif**, more or less related to the Sultan of Morocco, who live in the

Castell and the adjoining regions and who highly disapprove of their sovereign's intervention.

In the north-west of Morocco, the principal group of *Derkawa* has at its head the successors of al-Hajj Muhammad al-Hafsi, founder of the *Zawiya* of Oran, among the Beni Snassen near the Algerian frontier. Their activity has become particularly noticeable on all sides since 1890. The Sheikh al-Hafsi is the typical wild hero, hating non-Mohammedans and recognising no authority other than that of his religious superiors. He found numerous followers in Northwest Africa even before the troubles at Marguerite; the activity of his agents in Algerian territory was noticed by the Mohammeds of the rival (though of the same brotherhood) *Zawiya* of the Uad Laksat, near Tlemcen.

The Franco-Moroccan agreement of 1901 and 1902 appealing to the Berber tribes to threaten their independence led to renewed agitation among them (tribes of the *Magel* *Amra*, of the *Bo Amra*, etc.). The occupation of Marguerite in 1904, the institution of the *Marquet* of Algiers in 1906 naturally much disturbed the *Derkawa* *Mahaddam* of al-Hafsi's, the Sheikh of the *Zawiya* of Zagal was the instigator of the rising of the Beni Snassen against the French in 1907, which led later definitely to occupy the lands of these mountaineers.

The plan of introducing conscription among the natives of Algeria likewise caused the hostility of the *Derkawa* against Algerian authorities. In 1908, a Mohammed of al-Hafsi's in Tlemcen, named Hajj Muhammad b. *Wag* being unable to stir his fellow tribesmen to open revolt, preached an exodus into Muhammadan territory, more particularly into Turkey. He succeeded in creating a certain movement in this direction and several hundreds of families of Tlemcen or the neighbourhood emigrated to Tripolitania on into Syria between 1909 and the summer of 1911. But the war between Italy and Turkey has partly checked this movement, on the other hand the Mohammeds of *Al-Ma*, finding himself in danger, escaped in September 1911 and fled to the East. Two hundred disillusioned emigrants then returned to Tlemcen and the emigration movement, strongly opposed by the authorities, seems to have ceased.

Such has, in a few words, been the part played by the *Derkawa* in the politics of Algeria and Morocco for over a century.

The present state of affairs. This brotherhood, one of the most important in Morocco, if not the most important possesses a large number of *Zawiyas*. The chief is the mother *Zawiya* founded by Malik *T-Ash* *Derkawi* in his own tribe, the Beni Zurwal, in the place called *De lanih*. This was the favourite residence, far from all civil power, of the great organizer of the brotherhood; it is there also that his successors still live. This *Zawiya* exercises an administrative and moral authority over all the others, which it as a rule obeyed. All the groups, without exception, send it their annual offering. Its influence is universal among the Beni Zurwal and is preponderating among the *Tamemam*, the *Shamara* and the tribes of the *Uad*.

This brotherhood under the influence of several large tribes which have adopted its tenets is divided into a certain number of branches. These are, in Morocco:

1. The branch of the *Zawiya* of *Gaf*, in *Ma-laghat*. This *Zawiya* was formerly a kind of place of jurisdiction (a measure of precedence on the part of the rulers of Morocco) of the relatives or allies of the Sultan who had a claim to the throne. It has become a house of hospitality to the *Mahkhar* which is in agreement with the Christians. The influence of this *Zawiya* is almost preponderating in *Tahalt*, among the Moroccan Berbers of the High Atlas and the Eastern Central Atlas, as well as in the valley of the upper *Mulaya*.

2. The branch of the *Zawiya* of *Oran*; its sphere of influence is the Beni Snassen and the N. W. of *Iran*.

In Algeria, the principal branches are:

1. That of the Uad *Mabshar*, or *Matharia*. Its sphere of influence is the *Humayn* and certain of the Beni *Gul* of the Algero-Moroccan frontier.

2. That of *Kaddir* b. *Mham*, of *Mouagham*, whose influence dominates the *Tell* of *Oran*.

3. That of the Uad *Laksat* near Tlemcen, whose influence is preponderant throughout the valley of the *Spah*, the mountains of *Wassala* and those of *Musata*.

There are also a few *Zawiyas* of little importance in *Tahalt*, *Tripolitania* and in the East.

The brotherhood of the *Derkawa*, with some modifications, has given rise to certain religious groups in Morocco, which are even more ardent. Such are the *Kittaniyan* (disciples of *Sidi Muhammad al-Kittani*, author of the *Salam al-Anfal*), the *Hammayun*, variable branches (disciples of *Sidi Muhammad al-Hamsh*, 3rd successor of *Malik T-Ash al-Derkawi*) etc. The influence of these groups hardly extends beyond *Fas* and its environs. We have already noted the influence of a group of *Hammayun* in *Tahalt*.

(A. Cour.)

DERWISH, (*DERWISH*) is commonly explained as derived from Persian, and meaning "seeking death", i. e. a mendicant (Vulliamy, *Lexicon*, I, pp. 837, 845; *Grande d. Iran*, *Fas*, I, I, p. 260; II, pp. 43, 45). But the variant form, *Derwish*, is against this, and the real etymology appears to

be unknown. Broadly through Islam it is used in the sense of a member of a religious fraternity, but in Persian and Turkish more narrowly for a mendicant religious called in Arabic a *faqir*. In Morocco and Algeria for dervishes, in the broader sense, the word used is *ashshaykh*, "brethren", pronounced *ashshaykhs*. These fraternities (*tarīqah*, plural of *tarīqah*, "path", i. e. method of instruction, initiation and religious exercise) form the organized expression of religious life in Islam. For centuries that religious life (see *Sufism*) was on an individual basis. Beyond the single soul seeking its own salvation by ascetic practices or wearing meditations, there were found at most a teacher gathering round himself a circle of disciples. Such a circle might even persist for a generation or two after his death, led by some prominent pupil, but for long there was nothing of the nature of a perpetual corporation, preserving an identity of organization and worship under a fixed name. Only in the sixth century of the Hijra — the troubled times of the *Abbasid* break-up — did continuous corporations begin to appear. The *Kadiriya*, founded by 'Abd al-Kādir al-Jilī (q. v., A. 561 A. H.), seems to have been the first still-existing fraternity of definite historical origin. Thereafter, we find these organizations appearing in bewildering profusion, founded either by independent saints or by split and secession from older bodies. Such historical origin must, however, be sharply distinguished from the legends told by each as to the source of their peculiar ritual and devotional phrases. As the origin of *Sufism* is pushed back to the Prophet himself, and its orthodoxy is thus prolonged, so there are traced down from the Prophet (or rather from Allah-Kabir-Prophecy) through a series of well-known saints to the historic founder. This is called the *silṣila* or "chain" of the order, and another similar *silṣila* or apostolic succession of lesser saints from the founder to the present day. Every dervish must know the *silṣila* which binds him up to Allah himself, and must believe that the faith taught by his order is the center of Islam, and that the ritual of the order is as valid as the faith, the relationship to the *silṣila* is through his individual teacher (*shaykh*, *murshid*, "master", *pir*) who introduces him into the fraternity. That takes place through a "contract", consisting of religious professions and vows which vary in the different orders. Previously the neophyte (*murid*, "willow", "disciple") has just through a longer or shorter process of initiation, in some form of which it is plain that he is brought under hypnotic control by his instructor and put into rapport with him. The theology is always some form of *Sufism*, but varies in the different orders from ascetic quietism to pantheistic anti-munimism. This goes so far that in Persia dervishes are divided into those who are "with law", that is, following the law of Islam, and those who are "without law", that is, rejecting not only the shari' but the moral law. In general the Persians and the Turks have diverged further from Islam than the Syrians, Arabs or Africans. The more grades in different countries may assume different forms. The ritual always lays stress on the emotional religious life, and tends to produce hypnotic phenomena (auto and otherwise) and fits of ecstasy. One order, the *Qadiriya* (q. v.), is

distinguished by its requiring from all its members an annual period of retreat in solitude, with fasting to the utmost possible limit and endless repetitions of religious formulae. The effect on the nervous system and imagination is very marked. The religious service common to all fraternities is called a *dhikr* (q. v.), a "remembering", that is, of Allah (Qur. said. 41 in the usual text), and its object is to bring home to the worshipper the thought of the unseen world and of his dependence upon it. Further, it is plain that a *dhikr* brings with it a certain heightened religious exaltation and a pleasant dreaminess. But there go also with the hypnosis, either as symptoms or consequences, certain physical rules and phenomena which have earned for dervishes the various descriptions in the west of barking, howling, dancing, etc. The *Mawlawiya* (q. v.), founded by 'Abd al-Lāh al-Khawarizmi (d. at Konya in 672 A. H.), distinguishes itself by a whirling dance. The *Sadikiya* (q. v.) used to have the *Dawra* (q. v.) and still in their monasteries use the beating of little drums, called *dar*. The use of these is now forbidden in the Egyptian monasteries as an innovation (*bid'ah*; Muhammad 'Abd al-Qādir, *Tarīqat*, II, 144 et seq.). The *Sadikiya*, *Rifa'iya* and *Almudiriya* have particular chants, peculiar to each *tarīqah*, of calling glowing names and *tasbeehs* or sorceries and glosses, of passing needles through their bodies and spiken into their eyes. But besides such exhibitions, which may in part be tricks and in part rendered possible by a hypnotic state, there appears amongst dervishes automatic phenomena of clairvoyance and clairvoyance and even of levitation, which deserve more attention than they have yet received. These, however, appear only in the case of accepted saints (*awliya*; q. v.), and are explained as *karamat* (*miracles*; q. v.) wrought by Allah for them. But besides the small number of full members of the orders, who reside in the monasteries (*asthanas*, *dhikr*, *adwara*, *tabiya* or *tabat*) or wander as itinerant seers (the *Sufanides* an order derived from the *Daknawites* must wander continually), there is a vast number of lay members, like *Franchises* and *Knights* in Christian countries, who live in the world and have only a day of certain daily prayers and of attending *dhikr* from noon to time in the monasteries. And even thus the number of regular dervishes must have been much larger than now. Especially in Egypt under the Mamluks, their convents were very numerous and were richly endowed. Their standing then was much higher than it is now, when dervishes are looked down upon by the case-lawyers and professed theologians (*ulama*). In the essential conflict of intuitionism on the one hand and traditionalism and rationalism on the other. For these divisions are further under *Sufism*. Now their members are drawn mainly from the lower orders of society, and for them the intensity of the life is in part like a church and in part like a club. Their relation to it is much more personal than in a mosque, and the fraternities, in consequence, have come to have the position and importance of the separate church organizations in Protestant Christianity. As a consequence, in more recent times, the governments have assumed a certain indirect control of them. This, in Egypt, is exercised by the *Shaykh al-Bakri*, who is head of all the dervish fraternities there (*Adab al-Shaykh*, pp. 374 et seq.). Elsewhere there is a similar head

DHANAB (A), "Tail", the name of the star α in the constellation of Cygnus (Deneb), properly *Dhanab al-Azraq* to distinguish it from *Dhanab al-Ahad* = β in the constellation of Leo.

DHAR, state in Central India, under a Maratha ruler; area, 4,775 sq. mi.; pop. (1901), 1,21,115, of whom 9% were Musalmans. The greater part lies upon the fertile plateau of Malwa, including the historic forests of Māndla. The town of Dhār — pop. (1901), 17,792 — is a very ancient place, having been the capital of the Paramāra Rājaputras, from whom the present claims descend. It was occupied by 'Ala' al-Dīn in 1200 A. D., and became known as Dīkha Dhar from the large number of saints buried here. In 1309, Likhwar Khān, Ghori, the governor from Delhi, founded the independent kingdom of Malwa, the capital of which was moved to Mandla by his son. The fort, which still stands, is said to have been built in the time of Muhammad b. Tughlak (1325—1351). Two mosques are constructed out of remains of Hindu temples; one of these, built by Likhwar Khān, is known as the 15th Masjid from an iron pillar, now broken into several pieces, which resembles the more famous iron pillar at Delhi. An inscription on it records the death of the emperor Akbar at Dhar in 1598. The other is popularly called "Rājā Khudj's School", because the floor is paved with slabs inscribed with rules of Sanskrit grammar. On the bank of the Mithā is a portion of a Sanskrit play, and on two pillars a curious epitome of Sanskrit inflectional terminations, cut so as to resemble a snake. Among the monuments are those of 'Ala' Allāh Shāh Cāngal, who is said to have converted the Hindu Rājās to Islam before the Musalman conquest; and of Khāikh Kama' al-Dīn, with an inscription in Kufic character on a blue tile, recording its erection in 1457.

Bibliography: Central India Gazetteer, Vol. v, pp. 389—513; *Journal of the Bombay Branch of the Royal Asiatic Society*, xix, No. 2, and xxi, pp. 332—354; *Archaeological Survey of India, Annual Report 1904—1905*, p. 43 sq. (Calcutta, 1906). (J. S. GERRON.)

DHARRA, a word meaning something very small such as an ant or a speck of dust, which is used by Muhammad in the Korān to indicate the perfection of various qualities of God. For example the perfection of his justice: "And will not wrong any one even by the weight of a *dharrā*" (iv, 44, and cf. xxi, 7-8); the perfection of his knowledge: "The weight of a *dharrā*, on the earth or in the heavens, would not escape your Lord" (x, 62, and cf. xxi, 3 and cv, 59); the greatness of his power: "call upon those whom you believe in exist besides God; they have no power in heaven nor on the earth, not even as much as the weight of a *dharrā*" (xxiv, 20).

According to Zamakhshari's commentary on Sūra iv, 44, *dharrā* is a small ant; the variant reading *harra* "ant", is actually found in this passage in stead of *dharrā*; according to Ibn 'Abbās, the *dharrā* is what one obtains by dipping his hand into dust and then blowing upon it.

The word "atom" best translates the term. But the word *dharrā* is not used by Arab writers to express the notion of an atom in the philosophic sense; they are rather: *dhira*, "part". On the philosophical atom see the references in the article *ATOMIC*. (R. CANE and VAND.)

DHARWAR, the southernmost district of the Bombay Presidency of India, lies between 14.17 — 15.50 degrees North Latitude, and 74.48 — 70 degrees East Longitude. Owing to its remote position, it remained for long free from Muhammadan control; but after the capture of the Fort of Belgam from Vijayanagar by the Bahmanī King, Humāyūn Shāh, in 1472 A. D., most of Dharwar also came under the Bahmanī rulers and passed on their fall to the Adil Shāhī kings of Bijāpūr. For a time the country passed again under Vijayanagar, but from 1573 to the destruction of their house by the Emperor Aurangzeb in 1686 it remained under the Ingāpūr rulers. It was afterwards under the Nizām of Hyderabad, and then under Haider 'All of Mysore, and much fierce fighting took place in it between the latter and the Marāṭhas. The last and the British besieged Dharwar Fort in 1790 and captured it from Tipu Shāh's Governor Badi al-Zaman Khān. On the fall of the Marāṭhas the district passed under British rule in 1818. The Muhammadans in the district number rather over 100,000 and form 12% of the population. In Dharwar City they form nearly 20% of the inhabitants. There are a few small Jagirdars among them. The soil of the district is hilly and wooded; the soil is a brownish plain of black cotton soil.

DHAT. (See *III*.)

DHAW. (See *II*.)

DHAWI. (See *III*.)

DHIL. (See *III*.)

al-DHILAB (Arabic, "wolf") a South Arabian tribe. Their land lies between the territory of the Lower 'Awālik (q. v.) and the Lower Waḥhīl (q. v.). There are also considerable settlements of the Dhilab in the country of the Lower Waḥhīl itself, the villages of which are mostly occupied by them. The soil is infertile and mostly pasture-like pasture land. In the east of the district is a mountain of some size, the Jebel Hamra (over 4000 feet high). The chief place is the fishing village of Hāwra (al-Hiyā) with an important harbour.

The Dhilab are a very wild, warlike tribe of robbers and are therefore feared throughout South Arabia. They are Kahlilī (free, independent tribes) and are considered as genuine Hilmān; their slogan (*shāhā*, "war") is: and *dhil* (Arabic, *dhilayyar* (Hilmān) "I am the wolf of the Hilmān"). They have no common Sultan, and the various branches of the tribe are ruled by Khalkha, called *dhil* ("father"), whom they only heed in case of war. The most influential branch of the Dhilab lives in 'Asgha (Dhila, 'Asgha).

Bibliography: v. Malzan, *Reise nach Südarabien* (Braunschweig 1875), p. 224, 235—238; Comte de Landberg, *Arabien*, iv. (Leiden 1886), p. 19 et seq. v. (ibid. 1898), p. 230 et seq. (J. SCHNEIDER.)

DHIB, the wolf, is described as extremely malignant, quarrelsome and cunning. When a large number of wolves are together, no one separates from the flock as they do not trust one another; when one becomes weak or is wounded it is eaten by the others. When asleep they keep the right and left eye open alternately to keep a watch on another. When a wolf is not a watch for an opponent, it howls till whom come

to unchastity in law-courts, protection under criminal law and in marriage. Of course all these points have been and are confused with very varying degrees of rigor. On the other hand, the Muslim guarantees them security to life and property, protection in the exercise of their religion and defense against others. They may repair and even rebuild existing churches, but not erect new ones or new ones. Nor in the exercise of their worship may they use so offensive publicly. Their life, public and private, must be of a quiet, inoffensive nature. And they are not *dhimmis* of the Muslim state. Rather, each non-Muslim community governs itself under its responsible head — rabbi, bishop, etc. — who is in touch of communication with the Muslim government.

Etymology: Joyntoll, *Handb. des Islamischen Gottes*, pp. 350 et seq. and references there; Hughes, *Dict. of Islam*, pp. 710 et seq. — a good statement of the legal situation as to marriage, inheritance, bequests etc.; K. J. H. Grottel, *Islamismus und Islam in Egypt in Old Testament and Semitic Studies in memory of William Robertson Harper*, vol. II, (Chicago, 1908); Howard, *Islam in Egypt* (Cairo, 1904), pp. 120 et seq.; Baladouny, *Islam* (ed. de Gizeh), p. 447 et seq. on *dhimmi*.

(L. V. MATHIAS.)

DHIRA', primarily *the* part of the arm from the elbow to the end of the middle finger; then the measure — a cubit. Containing no *dhira'* (hand-breadth) the measure is called *dhira' al-umma* (the cubit of the common people, the common cubit). Containing *uma* it is named *dhira' al-malik*, or king's cubit, so called because the *dhira'* of one of the Kings was *uma* hand-breadth. Also the instrument, of wood or iron, with which the length of the *dhira'* is measured.

Dhira' again is used of the foreleg of a sheep and goat, i. e. the part above the *hadd*; and the foreleg of camels, horses, mules and asses, i. e. the part above the *hadd*. The brand put upon this part of the leg is called *dhira'*, and is said to have been employed by the Saba, the *dhira'* and the *dhira'* Malik b. Sa'd. Sany *dhira'* is the name of one of the stars in the Gemini (*al-Dhira'*).

(A. S. FULTON.)

DHU (a) with a following genitive, "lord" or "owner" e. g. *Dhu 'l-Kutayb* "owner of the two powers" (the sword and the pen), an epithet of al-Faḥl b. Saḥl (q. v.), *Dhu 'l-Karad*, lord of the two Wastrates, a title among the Arabs of Spain, *Dhu 'l-Yaḥsin*, he of the two right hands, an epithet of Yāḥya b. al-Ḥusayn (q. v.); also "the man who" to express ownership, e. g. in clan names of South Arabia, cf. Kämpfner in *Zeitschr. der Deutsch. Morgenl. Gesell.*, liv. 624, often also in the plural, *Dhūm*, *Dhūm*: cf. Sauek *Sturgenj.* *Stuba* L, 115 et seq. The word is derived from the demonstrative pronoun *dhū* and along with the functions of a man has adopted the inflexion of one; Gen. *dhū*, acc. *dhū*. The feminine is *dhāt*, which not only means "female owner" or "mistress", but also has the meaning of "being" and in this meaning has given rise to new words like *dhāt*, *dhāt* "pertaining to being". The plural in classical Arabic is *dhū*, all (besides *dhūm*, see above). A number of compounds follow.

DHU 'I-FAḤAR (a.) the name of the *zamra* sword, which Muhammad obtained as booty in the battle of Badr;

it previously belonged to an infidel named Maḥabbih b. al-Ḥadīdī. The name of the sword is connected with the expression *Saḥl Maḥabbih* "sword with the notch". It is mentioned in several *ḥadīth*, which have been collected, for example by Ibn Ḥaḥl, u. a. (near the end, not yet printed) among the *Shawā'id* in the section *fī Saḥl al-Faḥl*. According to one of these traditions the sword bore an inscription referring to the blood-money which ended with the words *al-ḥadīth* *dhū* "no Muslim shall be slain for an unbeliever". Its excellence was proverbial in the *Ḥijāz* there was a saying, *dhū 'l-Faḥl*. These words are a very popular inscription to this day throughout the Mohammedan world on the beautifully engraved sword of the noblest ages. The sword passed from Muhammad to 'Alī and was afterwards in the possession of the 'Abbasid Caliph. It certainly was originally two-edged like all ancient Arab swords. Later when swords with only one edge were the rule, this sword was imagined to have had two points; it frequently appears in this form as an ornament in art, cf. the reproduction on the accompanying plate.

Dhu 'l-Faḥl finally also became a man's name, which is found more particularly among Shī'īs.

Etymology: F. W. Schwarzinger, *Die Waffen der alten Araber* (Leipzig 1886), p. 150.

(E. MATHIAS.)

DHU 'I-HIJRA, literally "Owner of the Pilgrimage", is the last month of the Mohammedan year, so called because the Mohammedans to Mecca (*ḥajj*) and the religious ceremonies associated therewith are performed in it, occupying the seventh, eighth and ninth days of the month. In no other month can a visit to the sacred city bear the name of a pilgrimage.

(A. S. FULTON.)

'I-KADA, "Owner of the Force"; the seventh month of the Mohammedan year, so called because during that month the ancient Arabs waged no warfare, but engaged in peaceful occupations.

(A. S. FULTON.)

DHU 'I-KADR, a Turkoman dynasty, which ruled for about a century and a half in Malaya and Aḥḥān, and was founded about the middle of the 13th century. Zān al-Dīn Karāḥa b. Ḥu 'l-Kadr is said to have been the first of the line; he was succeeded by his son Khālīl (1261, 782—788 A. H.). Karāḥa conquered Aḥḥān, Khālīl Malacca, Malacca, Kuantan and Behean, but the continuous struggle as to the date of these conquests; both fell to battle with the Egyptian governors of Damascus and Aleppo. Khālīl was succeeded by his brother Saḥl Beg (788—800); he defeated the Egyptians, was recognized by them as lord of Aḥḥān and finally murdered by an emissary of Sulṭān Barḥīk. His nephew, Nāḥī al-Dīn Muḥammad, son of Khālīl, lord of Saḥl, took over the reins of government (800—840 A. H.); within the first period of his reign falls the expulsion of Khālīl Ḥaḥḥ al-Dīn, ruler of Siwa, and the conquest of Malacca and Behean by Sayyid I. Naḥī al-Dīn had married a daughter of Khālīl Ḥaḥḥ al-Dīn and after the latter's death he gave his brother-in-law Zān al-Aḥḥān a kindly reception (*Ḥadīth*-*Ḥadīth*, p. 34). This date, whose story had been borrowed by the Turkomans during the reign of Siwa, occupied Aḥḥān and the lord of the *Dhu 'l-Kadr*, attacked Malacca and Behean and

laid the whole country waste, whereupon the Dhu 'l-Kadrighis submitted to him (Sharaf al-Din, ed. Petia de la Croix, v. c. 16). On his return from Syria, in the beginning of 1301, he suddenly fell upon the Dhu 'l-Kadr Turkomans who were leading a nomadic existence around Tadmur and drove off their herds of cattle (Sharaf al-Din, *op. cit.*, v. 28). After Timur's withdrawal we find Nasir al-Din in alliance with Sulaym Mehemmed Celebi who had married one of his daughters (Lanckl. *Hist.*, 412); his son Sulaiman Beg in 815 A.H. accompanied Mehemmed Celebi on his campaign against the latter's brother Musa Celebi (Said al-Din, v. 264; Lanckl. *Hist.*, 432 et seq.). At a later period we find him involved in a struggle with the Karamanoghlis: the Karamanoghlis; Sulaym al-Mu'ayyid supported him and granted him Karamiya in 844 A.H.; Murad IV, afterwards conquered the town and handed it over to the Dhu 'l-Kadrighis. Nasir al-Din died in 840 after reigning over 44 years. Bertrandon de la Broquière, who journeyed through Asia Minor in 1433, found Turkomans of the Dhu 'l-Kadrighis at Hama (p. 102) and in another passage, (p. 119) he mentions that this prince had at his disposal 23,000 hammer darters 'Turquemen'.

Nasir al-Din was succeeded by his son Sulaiman Beg (840-858), who had been Beg of Malatya during his father's reign. In 843 (1440) he gave his daughter Shih Khân to Mehemmed, afterwards the third sultan of that name (Said al-Din, v. 398 et seq.; Lanckl. *Hist.*, 424). As Dukes tell us, Sulaiman Murad II. wished this alliance in order to have an ally in the prince of Dhu 'l-Kadr against the Karamanoghlis and the Kara Yönl.

His successor was his son Malik Arslan (858-870 A.H.), to his reign Ezan Hasan seized Chargat; he was murdered in 870, at the instigation of his brother Shihbudak by a Mulla in Mar'ash.

After his death his brother Shihbudak was installed by the Mamluk Sultan Kasr al-Din while Sulaym Mehemmed II. granted another son of Sulaiman Beg, Shihbudak, domination over the tribes of Dhu 'l-Kadr and Hozak. Shihbudak died in Egypt in 877 and left the throne to Shihbudak who was finally taken by the Egyptians in 877 and executed. Shihbudak did not however long enjoy his power; another brother 'Ala' al-Din was, supported by Sulaym Mehemmed II. rose against him in 884 (Said al-Din, i. 570 et seq. and ii. 163) and drove him out of his kingdom; Shihbudak was imprisoned by the Egyptians whom 'Ala' al-Din had been able to win to their side, and when in 895 he tried with the help of Bayazid II. to regain the throne from 'Ala' al-Din, he was defeated by him, handed over to the Egyptians and executed by them. Henceforth 'Ala' al-Din remained at peace with the Ottomans; his daughter 'Ala' Khân was the wife of Bayazid II. (Tashkôpézaré Kamul. i. 60) to whom she bore the future Sultan Seltan I. in 1407 A.D. On the other hand he came in conflict with Shah Isma'il of Tabriz, whom he had refused the hand of his daughter Beglu Khân; he had also taken the town of Diyarbakr after the fall of the Ak-Koyunlu. In 913 (1507) Shah Isma'il attacked 'Ala' al-Din in his own dominions, inflicted a severe defeat on him and deprived him of Diyarbakr and Chargat (Said al-Din, ii. 130; Lanckl. *Hist.*, 432 et seq.; v. Hammer, *Gesch. des Osm. Reichs*, ii. 145); one of his sons and two grandsons

fell into the hands of the Persians and were put to death by them.

Seltan I. finally destroyed the power of 'Ala' al-Din. On his return from the Persian campaign in 911 (1515), Khabib Shih Pascha was sent on a punitive expedition against the Dhu 'l-Kadr chief, who was thought to have taken up a hostile attitude to the Ottomans; on the 29th Rabi' II = 12th June a battle was fought between Shih Pascha and the aged Turkoman 'Ala' al-Din, who is said to have 60 years of age; his head and those of his four sons and thirty Turkoman princes were sent to the Sultan as trophies of victory (Faridun, i. 300; Said al-Din, ii. 293-297; v. Hammer, *Gesch. des Osm. Reichs*, ii. 425 et seq.). 'Ala' Beg son of Shihpascha and grandson of Sulaimanbeg was granted the thronus of the Dhu 'l-Kadr in place of 'Ala' al-Din; he had in his line before 'Ala' al-Din to Bayazid II. and distinguished himself in Seltan's campaign against Shah Isma'il. He afterwards accompanied Seltan I. on his Egyptian expedition and in the reign of Salim I. suppressed the rebellion of Mansur al-Din. He was then misrepresented to the Sultan by Faiz al-Pasha; Faiz al-Pasha entrusted with the task of chastising him, led him to meet him in his camp at Dinkâd and had him and his four sons put to death, (year 928; cf. Lanckl. *Hist.*, 759 et seq.). The land of the Dhu 'l-Kadr was made a Negherbeylik. Two grandsons of 'Ala' al-Din, 'Ala' Beg and Mehemmed Khan, sons of Shihbudak, also had escaped to Shah Isma'il, afterwards came to Sulaiman I. and received governorships from him; Mehemmed Khan died in 977 in Ramat (on him, cf. *Tabriz, Fawaid*, i. 1, 86 = i. 170 of the Oriental edition). 'Abd al-Karim Beg, a brother of 'Ala' al-Din, was brought a prisoner with his two sons to Constantinople in 1525, but his fate is unknown.

Under Ottoman suzerainty the Dhu 'l-Kadrighis enjoyed the privileges of a mediated ruling house (v. p. in the *Caribian* of Ewlyd, *op. cit.*) and appear in the 17th century with the *Klaidhmedli* of Stampé and the *Khân* of the *Kim* among the *'Amiraglio del Regno nungue'* (Sagredo, *Memorie storiche*, p. 1068 of the Venetian edition of 1677).

The name Dhu 'l-Kadr — Dukes writes *Tev-pârîk* (224; cf. *Surgudrat* in *Bertrandon de la Broquière, Descendunt in Sagredo*); Chalkokontyles and the *Historia Politica* confuse Dhu 'l-Kadr with the Torgud Turkomans of Isghel (Cilicia) and sometimes write *Tevpârîk* for Dhu 'l-Kadr, and sometimes *Tevpârîk* for 'Torgudlu' — has remained attached to the Turkoman tribes of Mar'ash; the former *Wyllet* Dhu 'l-Kadrighis conquered the Sanjak of Mar'ash, Malatya, 'Ain-Tab, Kara-Dhu 'l-Kadrighis and Sinemur ('*Ala' Ali, Karadunlu shahîr*, p. 22), with 2169 *hafa* (*simar* and *shahîr*), which turned out 5500 men ('*Ala' Ali, loc. cit.* 50). The *Wyllet* was also known by the name of land of 'Ala' al-Din.

Klaidhmedli: *Muhammadjimbashli*, ii. 267-271; '*Ali, Karadunlu shahîr*, loc. cit. p. 38-45; *ib.*, *Fahli shahîr* a *shahîr shahîr shahîr*, fol. 98 et seq. of my MS.; v. Hammer, *Gesch. des Osm. Reichs*, i. 175-179 (based mainly on *Muhammadjimbashli* in the more complete as yet unprinted edition); Cf. Schöfer, *préface* to *Bertrandon de la Broquière, Voyage*, p. lia. et seq. (following *Muhammadjimbashli*).

1100 I-PAKAR.

Representation of "Ali with the sword Ihtu I-Pakar on a mirror in the possession of Prof. M. Salernheim, Berlin.

ZAHIR AL-DIN KARAHYA (+ 780).

1. Ghazal 780-788.	2. Sulibeg 788-800. (Son, fight with Najir al-Din Mehmed: "Ali, <i>Ali</i>).	3. Ibrahim (s. 788 Lord of Kharpat: "Ali, <i>Ali</i> ; s. 819 sent to Mo- hammed I: Feridun, I. 157).	4. Ali (about 788: "Ali, <i>Ali</i>).	5. Oliman (about 788: "Ali, <i>Ali</i>).
Najir al-Din Mehmed, married a daughter of Kaji Buzhan al-Din of Sivast. 788 Lord of Sivast, reg. 800-846.		2. Hamza + 840 H. (Shahin-i 'Oliman).		
1. Suleimanshah 846-858.	2. Fays + after 840 (Shahin-i 'Oliman).	3. daughter, married Mehmed I.		
1. Malik Ar- kan 858-870.	2. Shashbadak 870-872; 877-884; + after 895. Shahkotak (889) taken prisoner and blinded by "Ali al-Bawla: 'Ali).	3. Shashbadak 872-877. + 'Ali beg 921-928. + 1. Nari Arslan, 2. Duwaz We- led (s. 926 executed with two other brothers: 'Ali).	4. "Ali al- Din (s. 884-921).	5. "Abd al- Kazak (921 banished to Constantin- ople).
1. Shashbadak (Lord of Kishkiri s. 905: Sa'd al-Din, H. 63 and 105).	2. Suleimanshah (Lord of Buzak; s. slain by "Alibeg 920: Sa'd al-Din, H. 257).	3. "Alibeg Khagan mar- ried Bahman (I. before 1467).	4. Beglakhani (sought as wife by Shah Khan).	
1. Mohammed Khan (+ about 977).	2. "Alibeg (about 949; + in Persia). Korakhan ("Ali, <i>Futū</i> etc., fol. 102). + Māfir Beg.			

(Saidhān of Coram, about 11. in Karsiyā, 'Alī, *Futū* etc. fol. 102).

Note: A place cannot be found for the Dhu 'L-Kadr Oghlu Karahbeg, who is mentioned about 830 H. in the history of Vargat Pasha (cf. v. Hammer, *op. cit.* s. 426 et seq.) in Lamsel, *Hist.*, 538 and 'Ashkharhān (p. 82). — That the Shashbadak Pasha, + 997 H., so often mentioned in Hun-
garian history, was descended from the Dhu 'L-Kadr Oghlu, has been examined by v. Hammer, *op. cit.*, H. 673 without good result.

DHU KĀR, the name of a stream in the land of the tribe of Bakr b. Wā'il (q. v., p. 604) between Wā'il and Kāfa. A battle bears its name which was fought between this Arab tribe and the Persians in which the latter were defeated. It is one of the best known and most celebrated of the *Asyām al-'Arab* (q. v., p. 218). Tradition varies as to the date of the battle. According to some it took place on the day the Prophet was born, according to most authorities however it was fought till after the battle of Badr (q. v., p. 559) and Muhammad is related to have said of it "the day was the first day the Arabs had won their rights from the Persians and through me they have been victorious". In many accounts two battles of Dhu Kār are distinguished. The battle is sometimes also called after other places near Dhu Kār, at which there were also fighting. — The accounts of the *Yarām al-Kār* gradually became much elaborated with new material — just as happened with the accounts of the battles between the Bakr and the Taghlib.

Thus were the popular names of the *Karab* *Harb* *Shahān* and *Karab* *Asghar*, (printed, Bombay, 1305).

Hittitgesch.: Tattari, *Annalen*, t. 1013-1016; 1028-1037; Ibn 'Abd Rabbih, *al-'Udā' al-farid* (Buldh 1302), H. 115-119; al-Bakri, *Geogr. Vert.*, ed. by Ferd. Wustenfeld (Göttingen 1877), H. 723-724; Moidān, *Maghamat al-Karab* (Cairo 1884), H. 325 — cf. G. W. Freytag, *Arabum Proverbia* (Bonn 1843), H. 537 —; Yāqūt (ed. Wustenfeld), I. 10-12; Mitwoch, *Prophet Arabum Papamentum*, (Bresl. Berlin 1849), p. 8. (L. Mitwoch.)

DHU 'L-KARNAIN, the "two-horned", a name always given to the individuals cited below, more particularly to the third. The two horns go back to an old mythological idea. Narman-Sin was for example represented as Adad with 2 horns (on the stele of Sasa; cf. *Pontif. & Sura*, I. pl. 1.). The two horns of Jupiter Ammon are well known. In Arabic, the name Dhu 'L-Karnain, the two meaning of which was not known to the Arabs

and which they therefore interpreted in the most varied and often quite ridiculous fashion, is known by the following persons:

1. **al-Kharrāz** (i.e. al-Akhar b. Mā al-Samī), the grandfather of al-Nūmān b. al-Munqir. He is said to have worn two long curled locks on his forehead; therefore to have received the name *Yhu 'l-Karnain*. According to Ibn Kuthayb's explanation he is the *Yhu 'l-Karnain* who is referred to in verse 16. 3 of Isma'īl 'l-Kāsi (Ahl-wanī, *See Dhawā*, p. 100).

al-Kharrāz (i.e. al-Akhar b. Mā al-Samī)
al-Nūmān b. al-Munqir

Whicher was a thunder-god in this *Yhu 'l-Karnain*.

2. The South Arabian king *Tubba' al-Aḥḥān* in *Yhu 'l-Karnain*. According to the South Arabian inscriptions in the *Yhu 'l-Karnain* mentioned in the *Kutub* (cf. under 3).

3. Alexander the Great is by the most frequently referred to as *Yhu 'l-Karnain*. He is mentioned by this name even in the *Kutub* (see xviii. 82 et seq.), after the original in the Syrian legend which arose in the 7th century A.D., in which Alexander says to God: "I know that thou hast caused hairs to grow upon my head, so that I may crush the kingdoms of the world with them". The Syrian legend is, as Nöldeke has shown, the source of the "Two-Horned" in the *Gordian*. For the details of this story and the accounts of Alexander the Great in the rest of Arabic literature see the article *Iskandariyya*. Among the explanations which the Arabs give of the name *Yhu 'l-Karnain* as applied to Alexander, I may mention the following: Alexander had two beautiful locks (*ḥarā* = *ḥarā*, see above) on his forehead; he was of noble descent on his father's as well as his mother's side, two generations (*ḥarā* = *ḥarā*) away during his lifetime; he was endowed with knowledge of the outer and inner world; he penetrated into the region of light and of darkness.

4. *Alī b. Abī Ṭālib* more rarely bears the name *Yhu 'l-Karnain*.

Iskandariyya: 1. *Lulu al-ḥarā*, xvii.

211; Winkler, *Arabisch-Syrisch-Orientalistik* (*Abhandlungen der Vorderasiatischen Gesellschaft*, 1901, 4), p. 138 et seq.

2. *Al-Bihar*, *Über die Isfahanische Sage* (Leipzig 1866, p. 70 et seq.).

3. Nöldeke, *Notizen zur Geschichte der Alexander-Sage* (*Denkschriften der Kaiserlichen Akademie der Wissenschaften, Phil.-Hist. Klasse*, 38. Vol., Wien 1890, v. *Abhandlung*), p. 27 and 33; *Lulu al-ḥarā*, xvii. 210 et seq.; *The 'Alī b. Abī Ṭālib* (Cairo 1310), p. 77; *Maṣṣūdī*, *Practical Hist.*, ii. 248-249.

4. *Ḥamīd* a. v. *Ben*. (E. H. H. H. H.)

YHU 'L-KIFL is an individual mentioned in the *Sūra* 21, in 38, in connection with a series of prophets, whose identity is wrapped in uncertainty. The Muslim commentators have only a very hazy conception of him and hesitatingly identify him with various people, chiefly Biblical personages like Joshua, Elijah, Zachariah, or Ezekiel. *Yhu 'l-Kifl* is a name of the prophet just as four other prophets have two names (*Yā'qub* = *Ya'qub*; *Yūnus* = *Yūnus*; *Isa* = *Isaiah*; *Muḥammad* = *Ahmad*). The view is definitely

advanced: *Iskandariyya*, I. 364, *Muḥammad al-ḥarā*, ed. C. F. Seybold, p. 681, that *Yhu 'l-Kifl* is an epithet of high according to some, e.g. *Yūf al-ḥarā* (*ḥarā*), a son of *Yūf*, whom God chose as a prophet to convert a heathen people for *Yūf* *ḥarā*, in *Shām* where he spent his whole life and died at the age of 75. The *Yūf*'s story that the sons of *Yūf* waged war against the heathen king *Lām* b. *Ḥarā* to whom they declined to give their sister in marriage and that *Yūf* was taken prisoner, stands quite alone. As his brother declined to sacrifice him, the king threw him upon a funeral pyre, but the angel of God protected him from a hurt death in the same way as *Abraham* had been protected from the fire with which he was threatened by *Nimrod*. *Lām* thereupon became converted with all his people. The accepted collections of *Ḥadīth* make not the slightest mention of *Yhu 'l-Kifl*, a point which critics place no value on the various legends about this individual. The legends have therefore been all the more industrious in finding motives for the *ḥarā* of this figure, which is quite colourless in tradition, by attaching inventions, all of which are connected with various meanings of the word *ḥarā* and the verbal stem *ḥarā*. First with the meaning "pledge" or "security" of the word *ḥarā*, *Yhu 'l-Kifl* is said to have pledged himself to the Prophet *Isa* (without coin, the *ḥarā*, he was according to some — *ḥarā* —), to whom he proposed himself *ḥarā* as a leader of the people of *ḥarā*, to fulfil three conditions: to fast by day, to spend the night in pious devotion and never to fall into a passion. In spite of the temptations of Satan he fulfilled these conditions. In the legends of *Ḥadīth* he gives the heathen king *Ḥarā* a written guarantee that the king will attain Paradise if he becomes converted or to be a guarantee for the payment of the ransom to *Ḥarā*. These legends are connected with the meaning of *ḥarā* as "double". *Yhu 'l-Kifl* enjoyed a double measure of God's rewards because he had done a double share of pious works. The name is connected with *ḥarā* to the meaning of "to attend to the maintenance of anyone", in a legend according to which he bore up sustained 70 (or 100) Israelites (or prophets) who were persecuted by a cruel king, in this story *Al-Bihar* (*See* *al-Bihar*, *Über die Isfahanische Sage* and Leipzig 1866, p. 70 et seq.).

Behind this *Yhu 'l-Kifl* a different sort of the same name is mentioned (*Yhu al-ḥarā*, *al-Bihar*, ed. C. F. Seybold, p. 190, l. 4 from the foot, et seq.), whose legend is however connected by *Ḥadīth* with the prophet *Yhu 'l-Kifl*. This *Yhu 'l-Kifl* was originally a sinful man, who took advantage of the indulgent position of a certain virtuous woman to tempt her to sin, but was restrained from actually sinning by her apparent compliance and converted to a virtuous life. He therefore was doubly (*ḥarā*) rewarded by God on the principle that a converted sinner is of more value in the eyes of God than

a pious man who never lets his *al-Fa'id* "and *Al-Ha'id* also *al-Ha'id*; cf. Bab. Talmud, Berakhot, 34b; Matthew, viii. 1; Luke, ix. 17; a type which often appears again with the latter moral application in edifying tales of the *Qisas* (e.g. the Jewish of Nathan De-Surab, the Muhammadan of *Imad al-Ashraf, Tazkirat al-Awliya bi-Tasfiat Ashraf al-Fakhri* [ish. Cairo 1270 H.], p. 354; in part also in *Sindhan*, ed. Haasgen, in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, lxx. 267). It is clear from the stories quoted here that the *Mashhurs* are not at all agreed on the character of *Uhu 'L-Kil*: whether he was a prophet or merely a pious servant of God (*'Abd Allah*). The champions of the first view rely solely on the circumstance that *Uhu 'L-Kil* has received a place in *Sura xvi* (*Surat al-Isra*).

Muslim local tradition has located tombs and holy places of *Uhu 'L-Kil* at various places in Muhammadan territory from Palestine to Baluch. See the references to these places in R. Hauer, *Nachrichten v. d. Terebinth* (Paris 1901) and my notes in the *Revue de l'Histoire des Relig.* xlv. (1902), p. 279. To two of these places in particular the memory of *Uhu 'L-Kil* is more seriously attached by Muhammadan tradition. One, the erstwhile association of which has now, according to G. G. Cameron's account (*Archaeological Researches in Palestine*, II. 308), been quite forgotten, is a *Kubba* at *Nabl* *Kant* in *Kail* *Maris* (near *Kail* H.). the name is also used in the earlier form in *Madh* *al-Din*, *al-Um al-Din*, p. 68, 7 and *Tasfiat al-Arabi*, xlv. 99, 13 near *Nablus*, in the district of which the graves of many prophets are located (cf. *Zeitschr. d. Deutsch. Paläst.-F.*, II. 15). In this case the identification of *Uhu 'L-Kil* with *Isa*, the son of *Isa* (see above) was proposed; the Samaritan scribe in *Kail*, the companion of *Isa*, son of *Nun*. Of greater importance down to recent times was the tomb of *Uhu 'L-Kil* in *Kail* (Muhammadan province the pronunciation *Kail*) formerly *Her* (the *Malaka*, on the left bank of the *Madaya* Canal, north of *Hille* in Mesopotamia (in the Wilayat of Anglud, Iraq: *Karsh*, *Karsh* *al-Mulki*) in which districts the tombs of many saints were located and honoured, without a doubt first by the Jews, (*Vallu*, II. 594). One of the latter certainly is the grave of *Ezekiel* which has been a highly revered object of pilgrimage from ancient times. On its importance among the Jews, see the sources quoted in the *French Encyclopedia*, v. 316, among which the account of the *Reignsburg* traveller *Petrus* (15th century) also gives an interesting account of the reverence paid to the tomb by Muslims (*Tout de l'Algerie* in *Revue de l'Histoire des Relig.*, loc. cit., p. 224). With the Muslims with which the Muslims always adopted the tombs of saints of other creeds (see *Revue de l'Histoire des Relig.*, loc. cit., p. 224) they have also taken this sacred place of Judaism within the sphere of their reverence and connected it with the mysterious *Uhu 'L-Kil*. This has also brought about a change in the original place name. During the reign of *Al-Jahid* *Al-Muhammad* (700 = 1300) the fanatic *Al-Jahid* *Al-Muhammad* *al-Din* *Abu 'L-Fadl* made an attempt to forbid the Jews access to the sanctuary founded by them and proclaimed it from the chancery as a place accessible to Muslims alone. This proclamation

gave the saint *Rashid* *al-Din* an excuse to overthrow this wall and bring about his execution (*Quintanilla, Histoire des Margraves de la Perse*, Paris 1836, p. cxiv et seq.).

His biography: A. The legend. See the commentaries on the *Qur'an* from the *Qur'an* referred to above, more particularly, *Tahawi, Tafsir*, xlv. 51-54; *Zamakhshari, Kashshaf* (Cairo 1307 H.), II. 53; *Fakhr al-Din al-Razi, Tafsihi al-Qur'an* 1284 A. H., VI. 185; *Tahawi, Annals* I. 364; *Imad al-Din* (Cairo, *Mahmudiya*, 1312 H.), p. 154-155; *Imad al-Din, Tadhkirat al-Awliya* (Cairo, *Mustafa*, 1295), p. 96. *Tadhkirat al-Awliya*, xlv. 99, v. 1. *Al-Muhammad* in *Fakhr al-Muhammad* (*Qasidat al-Muhammad*) collected the various accounts of *Uhu 'L-Kil* in his lost *Al-Fa'id* *al-Fa'id* (*Librairie de la Creation et de l'Histoire*, ed. Cl. Monod, III. 100, l. 3 from the text).

A. The tomb: *Nichols, Reisebeschreibung nach Arabien* etc. (Copenhagen 1776), II. 261-266; *Isaiah, Vindicta und Babylon* (London 1853), p. 500-501; *Isaiah, Reisebeschreibungen in Mesopotamien*, I. (Paris 1863) 243-246; P. Anasias *Cairo*, in *Al-Jahid*, II. 51-56; L. M. Anasias, *Almanach de Mesopotamien*, I. (Cairo 1910, *Almanach*.... de l'Institut Français de l'Archéologie Orientale 1910), p. 53; A. Nohlke, *Reisebericht nach Arabien und Mesopotamien*, in *Holsteinsche Reisebeschreibungen*, ed. by H. Groth, VII. 53-54 (where a photograph of the tomb is given). Illustrations of the tomb from various periods. The earliest in *Uhu 'L-Kil* *Simon* of *Uhu* (1563), *Vindicta* *al-Muhammad* (Venice 1659) from a drawing by an unknown artist made in 1563 (the tomb is here located on the bank of the *Tigris*); this view reproduced by *Job. Henr. Muller* in *Uhu 'L-Kil* (Hendelberg 1662) on p. 53 and *L. Carmoly, Histoire de la Terre Sainte* (Paris 1847), p. 459. *Imad al-Din, Tadhkirat al-Awliya* (Cairo 1295) (London 1837 reproduced in the *French Encyclopedia*, v. 315; most recent is *Imad al-Din* *al-Din* *al-Din*, *Uhu 'L-Kil* *al-Din*, in the *Revue de l'Histoire des Relig.*, 1911) III. 253, 254.

UHU 'L-NUN, *Amr* *al-Fa'id* *al-Muhammad* *al-Muhammad*, one of the most celebrated adepts of early Sufism was a native of *Abil*, born of Nubian parents; his real name was *Thawhan* but he is usually called *Uhu 'L-Nun* the Egyptian. He lived in Egypt and died at *Niza* (*Uhu*) in 243 = 860. He is mentioned among the "Palestines" (*Uhu*) and the "Syrians", i.e. "Syrian" (cf. *Tadhkirat al-Awliya*). His name is followed by the invocation "May God conceal his hidden state". Of this formula in the title of one of the articles of Book II. of the *Mathnawi* of *Rumi*. He is said to have lived unknown and his great sanctity was only revealed at his death. On the night of his death sixty-nine people dreamed that they heard Muhammad say: "I have just met *Uhu 'L-Nun* the friend of God". It is evident however that this lack of recognition signifies only that his sanctity was undisputed and not that he lived in obscurity for we find from the lives of the Sufis that he had disciples in his lifetime; his biographers say also that he had great influence over the people of Egypt, so much so that the caliph called him a saint and denounced him to the Caliph *Mutawakkil*. The latter man-

moned him in Baghdad and at last threw him into prison, but afterwards, impressed by his patience and overcome by his eloquence, sent him back in honour to Egypt. This incident shows the suspicion which Sūfism aroused in its early days. According to the *Notices al-ḥis* Dhu 'l-Nūn was the first Shaikh who openly professed the Sūfī doctrine.

In Book II of the *Magasiri* of Ḥisāl al-Dīn Rūmī occurs a long passage referring to these suspicions or to the astonishment caused by the doctrine of Dhu 'l-Nūn; his friends considered him a madman and had him confined. "When power is in the hands of the dissolute, says the poet, Dhu 'l-Nūn is necessarily in prison". In this passage the poetic is the symbol of spiritual knowledge despised by the vulgar who do not understand it.

Many sayings are ascribed to Dhu 'l-Nūn, for example the following: "The man of knowledge (*arif*) becomes more humble every day because he approaches each moment nearer his Lord".

"Mystic knowledge (*ma'rifā*) is the communication which God makes of his spiritual light to the depths of our hearts".

The surname Dhu 'l-Nūn which signifies 'the man with the fish' is applied to the prophet Jonah in Kor'ān, xlii.

Wilm, London, 1910), li. 132—133; cf. also works dealing with the history of Sūfism, like the *Sefer* of Ḥisāl, and the *Memorial of Saints* (*Tadhkirat al-awliya*) of Ferīd al-Dīn 'Aṭar.

(B. CARRE DE VEAUX.)

DHU 'L-NUN. The RĀW DHU 'L-NUN was an influential Berber family of the Buwārs tribe, who migrated into Spain at quite an early period where, during the rebellions against Muḥammad I (338—373 = 352—386) and 'Alidālā (375—400 = 388—412) Amīr of Córdoba, they played a part as leaders of a robber band of rebels, northern of Toledo in Shantaberiza (Santarc de la Gomella), Velasco (Huesca) and Utiqish (Utiel). After the fall of the Caliphate of Córdoba in the first quarter of the 11th century the first independent king of Toledo of the new dynasty, Yaḥyā b. Muḥammad b. Yaḥyā was overthrown in 427 (1035—1036) by Isma'īl al-Zāfir b. 'Abd al-Rahmān b. 'Amr b. Muḥammad b. Dhu 'l-Nūn, who reigned till 429 (1037). He was succeeded by his son Yaḥyā al-Ma'mūn (429—467 = 1037—1074) the greatest figure in the dynasty, who enjoyed a long reign and made temporary conquests on all sides from the centre of Spain; he was succeeded by his weak grandson Yaḥyā al-Kādir b. Isma'īl b. Yaḥyā who only reigned at Toledo from 467—478 (1074—1085), in which latter year he won the kingdom of Valencia from the feeble hands of the last 'Amirid, with the help of Alfonso VI of Castile to whom he had lost Toledo, and ruled his new kingdom till his death in 1092 when it became a republic under Ibn al-Jayshī (1092—1094). The splendour, extravagance and luxury of the last Dhu 'l-Nūn became proverbial: *Ḥaṣṣ al-Buḥārī* "al-Buḥārīan feast" (like a Lucullan banquet).

(C. F. SKYRÖLD.)

DHU 'L-NUN BEG ARGHUN was the founder of the Arghūn dynasty (q. v.) of Sind. He was at first Governor of Ghaz and Sindh under Hāmān Bāksh of Herāt, and made himself practically independent at Kandahar. He began to extend his power southwards into Sind with the assistance of his son Shāh Beg. He was killed in 913 (1507) in a battle against Sulṭān al-Haṣṣ (See the *at. Arghūnshāh*, pp. 166—167.)

(M. LONGWORTH DAVES.)

DHU 'L-RUMMA, an Arab poet of the tribe of Banī 'Adī. His proper name was Ḥabīb b. 'Ikba b. Ma'ād (or Ma'ādh). His mother was called Zabys and belonged to the Banī 'Amī. He was a contemporary of Ḥamīd and Farazdaq and in the feud between these two poets took the side of al-Farazdaq but without in any way distinguishing himself. He also wrote satires on the tribe of Imra' al-Ja'is, who found a champion in the poet Ḥishām. As the latter could only write *rajaz* verses, with which he could not hold his own against the more elaborate metres of Dhu 'l-Rumma, al-Farazdaq had to come to his aid but afterwards went over to Dhu 'l-Rumma's side. The latter also became a parodyist of Bilāl b. al-Hadad, grandson of Abū Mūsā 'al-Ash'arī. The latter had, as every one knows, played a very unbecoming part at Ashjūb but this did not of course hinder our poet from representing Abū Mūsā's conduct at Ashjūb as a credit to his descendants. Dhu 'l-Rumma's love-poems were at first dedicated to a Beduin named Mīnyā; Dhu 'l-Rumma and Mīnyā are one of the celebrated pairs of lovers among the Arabs. Afterwards when she harshly rejected him, by her husband's orders, it is said, he turned his attention to a certain Ḥarīṣ but died soon afterwards —, according to one authority, of small pox. The year of his death is uncertain. Ibn al-Khalīkān says 117 (735—736); elsewhere 101 (719—720) is given. The *Atīf al-Aghāni* says in one passage: "he died in the Caliphate of 'Alid al-Malik". This could not be later than 86 (703). But as the RĀW who has been employed as Dhu 'l-Rumma's patron, as we know from Tabarī, only became chief of police in Egypt in 103, Rāḍī in 111, and deputy-governor in 118 (which office he held till 120), this early date for the poet's death is obviously wrong. Probably in the *Atīf al-Aghāni* we ought to read Ḥishām b. 'Abd al-Malik instead of simply 'Abd al-Malik or has actually to be done in another passage. If this suggestion is correct there only remains the date 127 which would quite suit Dhu 'l-Rumma's relations with Bilāl. All authorities are agreed that he died in the prime of life ("40 years of age") and was buried in the desert not far from Bagdād.

This story of his burial in the desert is perhaps a myth; but it certainly is entirely in keeping with the character of the poet. Dhu 'l-Rumma was a thorough Beduin: in appearance, habits and ideas and by no means least in his style of poetry. According to Arab critics his great strength lay in his mastery of *as-taḥlīl*. Ḥamīd al-Rāwīya regards him as equal to Imra' al-Ja'is in this respect. He was particularly skilled in describing

"sand, noonday heat, desert, water, camel-flee and snakes" (the *Kutāiba*); and his descriptions of nature are always described as very remarkable. Abū 'Amr says he was the last *Shāfī* (i.e. *Kutāiba*) poet, as Mu'ba had been the last of the *Kāfī* poets. But he lacked the power to write effective panegyrics and biting satires. This was doubly disadvantageous to him. At one time the Arab *ḥakīm* looked him the rank of a classic (*ṣāḥib*); indeed they were on the whole inclined to deny him the credit of being a poet of genius (*muḥallif*) (*Agāḥī*'s cordial); but then — and this was probably still more unpleasant for him — throughout his life he was poor, although he was a notorious sponger and "often came among the country people as well as to Kufa and Basra to take part in wedding feasts" (*Agāḥī*). To complete this sketch of his character we must add that he plagiarized the works of his predecessors and even of his contemporaries in the most shameless fashion. Mu'ba in particular bitterly complained of him in this respect; he is even said to have simply appropriated whole poems by his brother. On the other hand it is right to point out that al-Burāda's stole certain verses from Dhu 'l-Rumma, because "he was more worthy to have written them", and that the Arabs of this period were, if possible, even more lax in their regard for the ownership of literary products than at the present day.

On the whole Dhu 'l-Rumma was less a poet than a clever maker of verse and a compiler. That he was not a born poet, he himself acknowledged, according to the Arab authorities. We are also told that he was able to write; he is actually *ḥakīm* to have concealed this fact because it was considered a disgrace among the Beduins (or perhaps rather among the poets of the old school?). He had further a considerable knowledge of the ancient poetry and lexicography, as he showed on more than one occasion. He used to settle the genuineness or falsity of poems, the meaning of words, etc. As an authority on the vocabulary of the Beduins he plays an important part in the Arab lexicography. Yāqūt likewise frequently quotes him in his geographical dictionary on account of the many place-names which occur in his poems.

(A. SCHAEFER.)

DHU 'L-SHARĀ, an ancient Arab deity. According to the Arab tradition he was a god who owned a reserved grazing-ground (*ḥayā*) among the Dawites (Wüstenf., *Geographische Tabellen*, 10, 2) with a hollow into which the water trickled down from the rocks, which is in agreement with the fact that the name 'Abd Dhu 'l-Sharā is found in this tribe. According to al-Kalbi (Wü-

stenf., 10, 2) also, this deity was worshipped among the related Ham 'Idjārah (cf. also Lane, i. v.), according to whom the site of his cult was al-Sharā. We meet with Dhu 'l-Sharā (Dumna) on more historical ground as the chief god of the Nabataeans, in whose inscriptions from Petra, the land east of Jordan and as far as al-Hijāz he is often mentioned. His chief sanctuary was in Petra where a large black, quadrangular ashewn stone was dedicated to him in a splendid temple. He had another important sanctuary in Soada which was called Dionysian after him. His festival was celebrated here in August which is certainly connected with the fact that he was identified with Dionysos as the god of fertility, particularly of the vineyard. In Petra and Elam, on the other hand, his festival according to Epiphanius, fell on the 25th day of December on which day "the virgin called Xaxar in Arabic and Dumna both of her (*ḥayā*)" were worshipped with Arabic hymns. How much reliance is to be placed on this statement is however uncertain, even the meaning of the word Xaxar being doubtful. It naturally reminds one of the Arabic *ḥayā*, "a young maiden with breasts developed", but it is also possible to connect it with *ḥayā* "cave" (cf. the *Kaḥa* in Mecca) according to which interpretation the god was thought to have been born from the stone.

As the compound form shows, Dhu 'l-Sharā is not a real name but an epithet of a god, whose actual name and original character is still unknown to us on account of the meagreness of our sources. That he was the sun-god, worshipped by the Nabataeans (Sihbe, vii. 4, 5), is only a possibility. He certainly only acquired his Dionysian character in a civilised land, in which connection it is important to note that an early writer — Herodotus (ii. 5) identifies the Arab god Dhu'al with Dionysos. One may even ask whether the god who bore this epithet was everywhere the same. The answer to this question depends on the meaning of the epithet and at this point so many possible variations offer themselves that it is scarcely possible to come to a definite conclusion. The lexicographers give the following meanings for *Sharā*: district, road or mountain. As they give as an example of the first meaning *Sharā* (*Sharā*) 'l-Hamm, "the neighbourhood of a sanctuary", the name might be interpreted as: owner of such a district, which would of course be applied to various gods. The word appears also, however, as a place-name with or without the article (cf. Steph. Byzant, 337, =: *Ḥarāḥ, ḥarāḥ; ar. ḥarāḥ ḥarāḥ* 'Arāḥ and according to the geographers was applied amongst other places to a hill in the land of the Tāḥites and a place near Mecca, where according to the *Diḥāḥ* of the Hudhailites (ed. Wellhausen, 276, 2), water was to be had and gazelles to be found. A place called *Sharā* is also frequently mentioned where many lions were to be met with (e.g. *Arāḥ*, ed. Wright, 33, 34, 35, 36, 37). The place near Mecca could most easily be identified as the Dawite Dhu 'l-Sharā (cf. *Bibl. Geogr. Arab.*, vii. 316). It is on the other hand more natural to connect the god of the Nabataeans with the district of al-Sharā (i) which practically coincides with the ancient Edom although, in spite of the equation proposed by Lagarde, it is still somewhat risky to identify *Sharā* and *Sharā*.

DIBAB, an Arab tribe, belonging to the Middle group. They were the descendants of Mu'awiya b. Kilab, who was called al-Dibab because of the color of his ~~eyes~~ (Dibab, Qabab and Mu'ayyid). Their genealogy is: Mu'awiya b. Kilab b. Rabi'a b. Amir b. Safa'a b. Mu'awiya b. Bakr b. Hawala.

They dwelled in the district of Kuna Darya in the Nadir territory.

The following settlements of the Dikhs are mentioned: *Maas* (bad Koi, *Maas* (bad Koi) and *Tulsh*; mountains: *Akheun*, at *Mawahoniy*, *Maas* (bad Koi), at *Yahm* (a large black hill), *Kalsh* (with *Maas* at *Kalsh*), at *Shanara* (a large mountain with *Maas* (bad Koi)), *Namra* (bad Koi), *Shanara* (a large mountain, one day's journey in length), and *Shanara* (a black hill with one day's journey), etc.

The following were Waddi of the Qiblah: (Hijab) al-Haddar, al-Halya (in common with the Hijar b. Kabb), Habb (Haw), Hadd and Turaba (a large W. with palm-tree and cactus); in common with the Hadd and 'Amir b. Habb; watering-places: Aqab, al-Awara, al-Naridan (near Dera Ghaidi), Hadda, Tharafa, al-Hisar, al-Qhadir, Haddara, al-Sabbah, al-Shaharima, Safala, Ma'ab and Manay, etc.

(1. 5244. 21774.)

ḌIBĀRĪ, a variegated silk cloth (silk). **ḌIBĀRĪ** is an Aramized form of the Persian *diḥā* or *diḥāb*, which means a coloured cloth in which warp and wool are both made of silk (*subrahma*, Arabic *shrahm*). **ḌIBĀRĪ** probably first entered Arabic through the Aramaeans in any case; the word was known by Shuhaimmūd's time, for it appears in a poem by Hārūn b. Ḥishām (*ʿAṣā al-ʿAghānī*, iv. 17, according to *ʿIṣṣanāt al-ʿArab*, *ʿIṣṣanāt*, iii. 40). The derivation from *shrahm* = *subrahma* or *shrahm* = 'cloth of the split' (*ḍibā* = *shrahm*) is of course a popular etymology.

In spite of the interdiction of the wearing of silk, *dhūḍī* was frequently used in the East in the middle ages as a material for masculine dress. It was especially used for robes of honour. At the *Ḥajj* in Calcutta there was a separate *dar al-dhūḍī* (Makbul, *Aḥḥad*, i. 464; cf. Karabekir, *Die Pers. Neddharer Suraudschah*, p. 84), in which this material was supposed to be manufactured but was probably only made up. The fabric itself is well as the name came from *dhūḍī* Persian; the frequent description of *dhūḍī* as *Khamrawān* is probably not merely a picturesque epithet but a direct reference to its origin. *Dhūḍī* was certainly a highly prized article of commerce, on which the *Ḥajj al-ḥajj al-Makbul* of *Ḥajj al-Ḥajj* of Abu l-Faḍl Ḥijāzī, as the *ʿAḥ al-ḥajj al-Makbul* (Calcutta 1318), p. 25, says: "There are several kinds

of Dildahy, some of which are used for clothing and some for hanging up and spreading out (as carpets). The best quality is that which is beautifully dyed, the designs (patterns) on which are neatly arranged, the silk fine and the web thick, the colour shining, the weight heavy, and which has remained free from traces of fire during the process of smothering (*jo shun-fan-shai*, probably a finishing process). The poorest quality is that which possesses the opposite qualities. The quality used for cutting out for clothes should measure 120, that for spreading out and hanging up 300 spans (*shih*); the piece (*shai*). It may however be more or less; but if it is not sufficient to make a garment, it is a most serious fault, for it cannot be cut up and it is difficult to find a use for it. Even when one finds a similar piece, it is hardly possible to obtain permission to cut a piece out of it to make up the necessary amount¹⁴. Numerous pieces of silk preserved in our museum ~~are~~ be claimed to be ditah.

On account of its beautiful appearance and its popularity the name *Shibui* or *shibuya* has been transferred to all sorts of other things; for example the prefix to a poem or book is called *shibuya* on account of its bold style; the same name is given to the grain of a wood or of a stone. (Shibui's glossary); for other meanings see the distinctions. In certain connections *Shibui* and the words connected with it have come to mean beautiful, brilliant, elegant. *Shibui* *ak-hu-ten* is a name used by the Maids for Shinsu xi—xlv, the so-called *ten-ju-ten*, which take their name from the cursive letters \Rightarrow which introduce them.

(1' 11. Previous.)

PIKAN, now more correctly pronounced **PISTAK** (Yafar. II. 717: Qibiyā; Shabl at-Zahid, ed. Kowalew, p. 220, 4: Qibyan; Ibn al-Jallāh at-Umari, *Ta'rif* (Cairo 1312), p. 104, 1: Qibān); an ancient city in Moab, the birth of the Old Testament, on the Roman road, which is however known to have been used as late as the Mamluk period, between Jabbāh and al-Mukha, became famous in 1868 as a result of the discovery there of the inscription of King Moab (the Moabite Stone). — Cf. A. Merrill, *Arabic Pictorial*, I. 376 ff. seq.

ABUL (or a person known "an old she-camel"), the pen-name of a famous Arab poet of the 'Abbasid period. His real name, according to the *Kutub al-ʿArabiyya* was Muhammad while other authorities say it was al-Hasan or 'Abul-Rahman. His *Amiya* was Abu 'Ali or Abu 'Izzat, the ancestor Razvi was a client of 'Abul ~~XXXX~~ b. Khalaf the Khurasani who was secretary to the Caliph Umar b. al-Khattab.

Al-Mu'll was born in 128 (765), his birthplace is unknown. His family was settled in Baghdad but originally belonged to Kufa, though some say to Karakisiya (Circassia). The poet certainly spent his youth in Kufa, as the result of an unfortunate circumstance he had to remain in confinement for a considerable period and wandered about the country in the company of all sorts of rogues and vagabonds. He then appears to have resided in Baghdad, where he made the acquaintance of the poet Ma'alluq b. al-Walid who introduced him to poetry. By a fortunate chance he came to the court of Harun al-Rashid.

The following facts are definitely known regarding Dibil's further career at the court of Hārūn and al-Amin. He was first for a period prefect of the town of Simlūkhā in Ṭaghazistan, a *nahiyā* (district) of Khurāsān. As his immediate superiors, *Wāsiṭ* (Abū Ḥayyān, s. v. Simlūkhā) mentions two persons: al-ʿAbbās b. Ḥajjār and Muḥammad b. al-Aḥmad. Probably these two individuals are in reality only one, viz., the al-ʿAbbās b. Ḥajjār b. (ʿ) Muḥammad b. al-Aḥmad, mentioned by Jahān (lii 609 and 612). This man (apparently a member of the *ṣayyid* clan) was governor of Khurāsān from 773—775 (789—792) in the reign of Hārūn al-Raḥīm. The period of Dibil's prefecture should most likely be placed in the same period. — Shortly before 800 (815-816) he made the pilgrimage and proceeded to Egypt to his fellow-tribesman al-Muḥallib b. ʿAbd Allāh, who was governor there from 798 to Rammadhān 800 (813—April-May 816). He wrote panegyrics on him and was handsomely rewarded and appointed prefect of ʿUwān (Assuan). But he lost the favour of his benefactor and was soon dismissed because of lampoons on him (which probably however were composed at an earlier period).

Soon afterwards he appears to have been again in the ʿIrāk but when al-Ma'mūn's uncle the singer and astrologer Ibrāhīm b. al-Muḥallib was chosen Caliph during the absence of the Caliph in Khurāsān by members and clients of the family of ʿAbbās in Baghdad (25th Dhū ʿl-Hijja 207 = 14th July 827), Dibil wrote bitter lampoons on him and the ʿAbbāsids in general; "If Ibrāhīm is strong enough to bear the bludge of the Caliphate, then Muḥarrir, Zuhayr and Malik (three professional singers) are qualified to succeed him" "How is it possible — it surely cannot be — that one possibility should inherit the Caliphate from another". Ibrāhīm was naturally enraged at being classed with "strolling people" and when he had again obtained the latter's pardon, he demanded that Dibil should be punished in the severest fashion. But the Caliph, as can easily be understood, took such a thorough intellectual delight in these verses that he forgave the poet everything that he had said against himself and his family, even a verse in which he pointed himself out belonging to the same tribe as his brother's executioner (Ma'mūn's general ʿUthayr b. al-Huwaymī, the conqueror of Baghdad).

This story is by no means improbable. But the slaying of the Baghdad ʿAbbāsids and the proclamation of Ibrāhīm had its origin in the fact that during his sojourn in Khurāsān al-Ma'mūn had appointed the eighth Shiʿite Imam ʿAlī b. Mūsā ʿl-Riḍā (see *lii* 111-112) as his successor. Dibil was a thorough-going Shiʿite throughout his life. He wrote panegyrics on ʿAlī al-Riḍā and was rewarded by him with a robe, which he preserved as a relic. He is also said to have received from him 10,000 dirhams which the Imam had ordered to be struck in his own name (*Ḥaḥḥat*, xlvii. 42 et seq.). Ma'mūn's possibly only feigned friendship to the ʿAbbāsids may have induced Dibil to make his peace with this ruler. In any case in the period following he wrote several panegyrics on the ʿAbbāsids. ʿAbd Allāh b. Tūḥ b. ʿAlī is said to have recited some of them to the Caliph.

Dibil maintained himself in the Caliph's favour for a considerable period, possibly the

latter saw in him a useful poet. Nor was he injured by the enmity of Ibrāhīm b. al-Muḥallib, who was again reconciled to the Caliph, nor of the Mozallimī *Ḥaḥḥ* ʿAbd al-ʿAzīz, while the Caliph simply took a delight in Dibil's biting lampoons on his secretary ʿAbū ʿAbdallāh. But ʿAlī al-Riḍā died at the end of Safar 203 (Aug.-Sept. 817) and on the 29th Dhū ʿl-Hijja 207 (13th April 823) the ʿAlid national flag of green was replaced by the black of the ʿAbbāsids. This is the latest date then (207 = 823) at which Dibil may have returned to his hostile attitude to the ʿAbbāsids. To this date or possibly a little later may be placed a poem in which Dibil describes Hārūn al-Raḥīm in the worst of men and the ʿAbbāsids as a whole as even more unworthy of the throne than the ʿUmayyads.

Shortly before this breach of friendly relations with the ʿAbbāsid court another feud had begun, which was to occupy the attention of a great part of Baghdad society for years if not for decades: Dibil's quarrel with the poet Abū Saʿd al-Maḥallī. The latter lauded the North Arabians (Nasabites) and poured scorn upon the South Arabians (Khalibites), while Dibil was the reverse. While Abū Saʿd for long exercised a certain moderation in his lampoons and at the same time could not break away from the forms of the old Beduin *qasida*, Dibil assailed him with the vilest abuse and expressed it in the language of the gutter. It then came about that only scholars cared for Abū Saʿd's poems, while on the other hand his opponent's verses were sung by the youth of Baghdad as street-ballads to which Dibil himself contributed his share. This feud lasted into the reign of al-Ma'mūn's successor, al-Muṭawakkil; for a poem by Abū Saʿd has survived in which he endeavours in the last verse to draw this Caliph into the feud against Dibil.

Al-Muṭawakkil himself, the eighth ʿAbbāsid Caliph, received a severe chastisement from Dibil on his accession and on his death the poet is said to have exclaimed "a Caliph has died whom no one laments and another has succeeded whom no one rejoices in". The verses Muḥammad b. ʿAbd al-Malik al-Zaydī on this occasion wrote an elegy on al-Muṭawakkil. Dibil's retort ran coupled with an incredibly unmeasured lampoon in which he called after the late Caliph: "Go to Hell and torment, I have never regretted thee as anything else than a devil". Al-Muṭawakkil, usually, the last Caliph whom he survived, was accused by him in a lampoon of pedantry. The verses and other attacks of the Caliph naturally did not come off any better than their masters.

Dibil's end beset his attitude throughout his life. He was harshly punished for a lampoon on the North Arabians by the then prefect of Basra, al-Jahh b. al-Aḥwas. After his release he fled to al-Ahwaz and is there said to have been treacherously murdered in the village of al-Ṭib in 216 (830-31) at the instigation of a certain Malik b. Tawb, whom he had irritated by a particularly cruel lampoon. The details of this story of his murder appear highly suspicious. It may more reasonably be presumed that he died as a result of the ill-treatment he had received in Basra; he was then 98 (Muḥammadan) years of age.

It is striking evidence of the importance attached to Dibil's person that the above men-

tioned prefect of Basra commissioned a North Arabian poet, Abu 'l-Da'if, to reply to the lampoons of Di'bil and Ibn 'Umayr in a poem which he printed under the title of *al-Da'ifa al-Du'ayfa*, the "crushing Kaftan". — That Di'bil's fellow-tribesmen, the Banu 'Umayr, were proud of their poetical champion only at home.

It is critically erroneous Di'bil's poems can only credit a few with any high poetic merit. Only a few isolated pieces have a noble theme (e.g. his farewell to Nu'aim b. al-Walid and lament on his cousin: *Aghani*, xviii, 47 and 34); are pleasant little trifles (we may particularly mention the "Locus-poem" in the *Kutub al-Kutub*, ed. de Goeje, p. 541; it might well be in the *Muhamm* of Abu Nawwas); the great majority are pamphlets and scurrilous songs that were sung in the streets. These are nevertheless particularly interesting to us as an account of the wealth of historical references which frequently afford a fairly safe clue to the dating of the poem in which they occur (which is by no means usual in Arabic poems), and contribute all sorts of little details to our knowledge of the historical personages mentioned in them. We need hardly point out that one must not believe every thing that Di'bil says about his victims. Cf. also the article *AL-KHAWAR*.

Di'bil's poems unfortunately does not appear to have survived in its entirety. Presumably his great popularity — which in this case means popularity with the mob — has prevented serious philologists from exhaustively studying this poet.

DIJLA (without the article) is the Arabic form of the name of the Tigris, called (Hammurabi) in Babylonian, *Ḫiḫlā* in Hebrew and

Ḫiḫlā in Syriac.

According to the Arab geographers the Tigris rises north of Maysan (i.e. "Tigranokerta") at Holar, a place celebrated in history on account of the death of "All the Armenians there in 249 (863) (see Tüchsen, *Suren*, p. 23); out of a dark cavern beneath the Hilar (i.e. T-Karnain). It is the grotto at the source that is here referred to (according to Belok in the *Verhandlungen der Berl. Ges. für Anthropologie*, 1900, p. 439), the subterranean course of the Tigris nearly a mile in length, near Hilar (Holaris = Myrion = Myrion = Myrion = Myrion: see Lehmann-Haupt, *op. cit.* p. 523, Hefelfeld in *Muscat*, i, 333), at the entrance to which the remains of a "Chaldean" citadel, in the neighbourhood of which the name of Qhu T-Karnain is still attached. (See Lehmann-Haupt, i, 439).

The Scamptus, Mukaddas, and Yabūt are our chief authorities on the upper course of the Tigris and its tributaries and have left us a wealth of statements which do not however entirely agree

and cannot always be verified. Yabūt seems to have used the best sources. He mentions a Nahr al-Kilāh "Dog River" as the first tributary, which is probably identical with the Nahr al-Dhīr "Wolf River" of Mukaddas. As he describes it as coming from the district of Shimshar (see *Isfahān*, p. 75; Chastelain, *Armenien unter Arab. Herrschaft*, p. 72; Hamilton in the *Verhandlungen der Berl. Ges. für Anthropol.*, 1900, p. 149), it seems clear that he is referring to the Arghana-Su. Next come below Diyār Bakr [q. v.] the Wādī Salū (= al-Rams of Mukaddas?) — probably the modern Ambar-Caf, the Wādī Salūdam (certainly the Raman-Su, perhaps al-Mandiyat) Mukaddas; cf. Marquart, *Erzählung*, p. 141 et seq., 161), and next the Wādī T-Sarba (called Nahr al-Ḫiḫlā by Ibn Scamptus), the river of Aram [q. v., p. 472]. At the bend in the Tigris is Tell Ḫiḫlā (the modern Tūl, the Tūl of the Assyrians; see Lehmann-Haupt, i, 337 et seq.) the Wādī T-Zam, also called the Bahān-Su or Eastern Tigris, a considerable stream, which has been augmented by the waters of the Bālis-Caf, (cf. M. Hartmann, *Erzählung*, p. 65 et seq.), joins its western sister-river from Diyār Bakr.

The name of the next tributary, which Yabūt writes Nahr Yarnā, should according to Andress M. Hartmann, *Isfahān*, p. 131, be read Nahr Yarnā which would be derived from the name of the Baghnewi tribe of Karda. To what modern stream it corresponds is as uncertain as in the case of the Nahr al-Kilāh, which is next mentioned (thereon cf. M. Hartmann, *op. cit.*, p. 31 and 136 et seq.). The identification of the latter with Ibn Scamptus's Bāsānā (J. R. A. S. 1895, p. 267, 263 et seq.) is not certain, especially as this author's account contains obvious errors. The identification of Bāsānā with the tributary called Bāsānā by Mesūdī, *Tamdh*, p. 34, is (cf. *Silsila Der* von Oppenheim, ii, 158) as the other hand seems probable as is that of the two names with the Scamptus of Ptolemy etc. (but cf. M. Hartmann, p. 101, note 1; and also p. 99 et seq., 133). Yabūt's next tributary, al-Ḫiḫlā, is quite uncertain while the name Wādī Dūkh, Nephelā etc. (M. Hartmann, *op. cit.*, p. 65 and 146).

The Arab geographers have not very much to tell us about the Khābūr al-Ḫamāniya which rises in al-Zawān, joins the Tigris north of Faleghābūr and forms the southern boundary of Ḫabān; mention may be made however of the world-famous Khābūr al-Sindī which, according to Mukaddas (p. 139 and 147), lies across the river of al-Ḫamāniya (= Khābūr) (cf. M. Hartmann, *op. cit.*, p. 39, 70 et seq.; on the modern bridge cf. Miss G. L. Bell, *Amurrah*, p. 287 and 289 and illustration 181; Preussner, *Nordwestr. Randasien*, p. 22 et seq.). After a brief reference, without giving it a name, to the Abū Marya, the stream which flows into the Tigris from the west at Deimā = Bih-Mawā (cf. von Oppenheim, ii, 159 and 165), Yabūt proceeds without further mention in this passage of al-Mawāḍ [q. v.] at once to the al-Zū al-Aḡam, the Upper Zab, which, rising in the district of Muzhaghbat and flowing through the Ḫabān country past Targun and Bāghābūr (cf. Hoffmann, *Städte der Syrischen Aram. Periode*, p. 227 et seq., 233 et seq.), discharges its waters into the Tigris above the now vanished al-Ḫiḫlā.

The town of al-Sinn (see Herzfeld in *Moscow*, I, 233), at the confluence with the little or lower Zahr (cf. Hoffmann, *op. cit.*, p. 254 n. 135) which flows in the district of Bahraza, likewise no longer finds a place on our maps.

Augmented by the waters of the latter, the Tigris, at the modern al-Fall, finally breaks through the Lybical Hamra (various Hamras, q. v., p. 660) which has so long been maintaining its course to the right. The al-Ibardi, which branched off from the Nahr al-Fall, which flows at Najaf, is said to have reached the Tigris at al-Hadi (q. v.) above Takrit (cf. Herzfeld in *Moscow*, I, 215 n. 107). By Vâhîr, and this watercourse which now disappears to the steppe was an important perennial, and it is at least doubtful if the channel which formerly connected the Euphrates and the Tigris was, as Vâhîr, 1921 says, actually navigable.

The great canal system of Babylonia periodically begins at al-Minadim's capital Samarra (q. v.). A vast network of channels leads away from the Euphrates and the Tigris, bearing the waters of the Euphrates to the Tigris in its upper part and those of the Tigris to the Euphrates in the lower part. This canal system which dates from the remotest antiquity, has been subjected to great alterations in course of time not only by the movements or neglect of the dwellers in the marshes but also by the working of the waters themselves. Streck in his *Die alte Landeskarte Babyloniens* has fully discussed the problem, many of which can never be completely solved, mainly on a basis of the Sarapion account. It is on his results that the following brief survey of the picture given us by the Arab geographers is based.

Not far below Takrit the Nahr al-Bahra branched off to the west from the Tigris and after irrigating the district of Tihza, again joined the main stream below Samarra. Immediately below the point of junction on the main side of the main river the important Nahr al-Bahra, watering the district of the same name, left the Tigris; the waters of the Euphrates canal of the same name appear to have mingled with it before it returned to the main stream south of 'Ukkra, which then flowed further west in the riverbed now called Shiqat (cf. Streck, *op. cit.*, p. 26, 33, 220 n. 107, 220 n. 107). The alteration in the course of the Tigris, traces of which we find as early as the 2nd century, appears by al-Minadim's time (1225-1242 A.D.) to have become a definite canal situation; it impedes a proper understanding of the ancient accounts in a great measure (but cf. also Herzfeld in *Moscow*, I, 232 n. 107). Not far from the beginning of the river al-Bahra, at al-Bir, the Tigris sent out eastwards the Kanal-Tamara-Nahrwaqa canal which ran for a considerable distance parallel to the Tigris, receiving the waters of the al-Afaim and the Dyma (q. v.) from the mountains on the east. It returned to the river at al-Bahra, or perhaps not till al-Bahra (see Streck, *op. cit.*, p. 298, 300 and 310 n. 107).

In the interval the Tigris received to the west from the large canals from the Euphrates the Nahr al-Bahra, the modern Nahr al-Bahra below Baghdad, the Nahr al-Sinn (al-Bahra) above al-Minadim, the Nahr al-Mahdi (Nahrwaqa), see also Herzfeld in *Moscow*, I, 234 below the town

and lastly the Nahr al-Bahra (Nahrwaqa) which runs to the west below al-Minadim. Here also the exact location of these canals is rendered difficult by the alteration in the course of the Tigris, the bed of which has been shifting westwards since 1200-1200 A.D. (see Streck, *op. cit.*, p. 292).

While the Sarapion regards the channel now known as the Hamra canal as the main bed of the Euphrates, the Nahr al-Bahra (corresponding to a portion of the present main stream), leaves according to him the same al-Bahra as far as the town of al-Nil, where it takes the name of Nahr al-Nil (cf. the modern Shay al-Nil) and finally flows into the Tigris in the Nahr al-Bahra, and lower Zahr Canal (cf. Streck, p. 304) at the village of this name, or al-Nahmudya, where it is connected with the Tigris by the upper Zahr Canal (cf. de Goeje in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxix, 2). With the Nahr al-Bahra we reach the Shay al-Bahra, which was regarded by the medieval Arabs as the Tigris proper, while the modern Tigris, which separates them from the marshes (approximately KU) al-Ahwas, was then of no particular importance. The Tigris of the Arabs, after passing through Wasat (on the canal of the latter cf. J. Wagner in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xli, 1902, p. 274 n. 107) and sending off a series of canals, and which had been the source of al-Bahra (q. v., p. 274 n. 107), the various lakes of which were connected by channels navigable by small boats and finally poured their waters into the Nahr al-Bahra. The main canal of the Tigris al-Ahwas, the 'Al-Bahra' (Tigris) (see Streck, p. 41; and Herzfeld in *Moscow*, I, 233), which apparently corresponded to the present lower course of the Tigris. According to the Hamra (p. 92, at one time) it flows from the south to end up the latter and connects the Tigris of the Arabs above Wasat at al-Bahra (p. 92) probably by the Kan al-Bahra Canal (p. 92) on the left. — Fara, a popular subdivision of Fâhira near Wasat (cf. Vâhîr's account II, 347 [see Herzfeld in *Moscow*, I, 234] combined with the passage from al-Bahra (see Herzfeld, *ibid.*, p. 136 n. 1) — al-Bahra in the medieval accounts made further advance impossible by the route and only the western channel, through the marshes remained.

In the lower part of the course the river al-Bahra (known as al-Bahra al-Ahwas (Shay al-Ahwas) again was an important channel, of the above main canals on the left bank only two may be mentioned here, as connecting streams with the river, the Nahr al-Bahra and Nahr al-Bahra; the most important on the east side was the Nahr al-Bahra, which formed a navigable connection of the lower Tigris with the Hamra al-Bahra, now called the Khamra al-Bahra (q. v., p. 7) where Persian gulf ships by night, was the town of al-Bahra. In the medieval accounts it appears to have quite lost its importance as a result owing to the advance of the coastline.

The preceding survey of the course of the Tigris according to the accounts of the medieval Arab geographers, naturally only gives the main outlines. Reference has several times been made to the undoubted alterations in the course of the bed of the river and to their supposed date. No doubt certainly is possible regarding the details of these changes. It is an open question at what date the Tigris sent its main stream east-

position at this point protect the plain from invasion. The population of the city in 1911 was 233,000, of whom $\frac{1}{2}$ are Mahomedans. In modern times it has been signalled by the assault and capture of the city in September 1857 A. D. after the outbreak of the Native Army, and the rebellion of the descendants of the House of Thakur, and by four great Durbars held at it, the first on the 1st January 1877 on the occasion of the assumption of the Imperial Title by the Queen Empress Victoria, and the last held as above stated by the King Emperor George. Dhili is the centre of six railway lines, and of the largest body of trade in North India, and in the future proposed for it, will doubtless rise rapidly to the rank of an Imperial city in all respects.

The oldest of the many Sires known as Dhili, usually said to have been seven in number, was the city of Rai Pithora or the Pithori Rajia, a prince of Cawhān (Mallpāl) descent, from whom it was captured by Kust al-din Alak, lieutenant of Shāh al-din Ghori in 519 A. D. In 602 A. D. the conqueror became an independent King, and the first of the Slave or Turk dynasty of Dhili, which ruled till 689. By him and by the Emperor Alauddin (Iltutmish), who succeeded in 697, were constructed the magnificent minar and tower of victory 258 feet high, known as the Kust Minar, the famous Kust al-din mosque made out of the materials furnished by Hindu temples destroyed on the spot, the graceful screen of lofty arches on the west side of the mosque, and the richly decorated tomb of the last emperor. Inside the mosque is the famous iron pillar erected at this spot by a former predecessor of the Pithori Rajia. The second King, of the next, the Khalji dynasty, 'Alauddin, added the beautiful 'Alauddin Mosque, or porch of approach, and proposed a great extension of the mosque, and the construction of a second enormous minar, but these never got beyond the stage of inception. His tomb at the southwest corner of the enclosure, and that of the Emperor Bahman (died 686 A. D.), which lies $\frac{1}{2}$ mile to the southeast of it, are now complete ruins. Outside the enclosure of the city to the south-west is the shrine of the Ghori Saint Kust al-din Khat (died 631 A. D.), round which are the graves of some of the latest Emperors of Dhili, and other notable persons. The Sultan Khatyn, daughter of Alauddin (Iltutmish) who reigned three years from 634 A. D., was the only female ruler among the Kings and Emperors of Dhili.

The second capital Siri was built by 'Alauddin Khalji (695-715 A. D.) two miles north of the first, and the space enclosed by the walls connecting the two, and known as Dihlah-purahi, is reckoned as the third city. This was the Dhili captured by the Moghul Nadir Shah in 800 A. D.; the only remains in and near it, date from the time of the following dynasty one of these, the Ghikri mosque, is interesting as being entirely roofed over like the mosques at Calcutta and Cordova. The Taghlab king founded two capitals, Taghlababad and Pithlabad. The first, which lies 4 miles to the southeast of Siri, is an utter ruin, but the immensely high white walls of the city and Citadel still visible for many a mile round, and the tomb of the founder (died 725 A. D.) still stands in the fortified enclosure in the lake, now dry, which once protected it: it probably suggested the strangeness of the tomb

of Shāh Shah at Samasim (died 952 A. D.). The site of the fifth capital was selected by the Emperor Feroz Shah (751-790) some five miles north of Siri. This was probably much larger than the Moghul Dhili, and extended northwards well into the southern quarters of that capital, and southwards to nearly the tomb of Humayun. The Kalin, (or Kalu Masjid, south of the great Dhami Masjid of Shikhabad, is of that date; while west of the present city is the very ancient enclosure of the Kadam Shahi, containing the tomb of the Emperor's son Prince Fath Khan, killed fighting against the Mughals; and on the ridge above Dhili are ruins of the Royal Hunting seat of Kachik-d Shikar, called from its commanding position Dabhan-nur, in which was placed a stone flag (pillar) of the Emperor Akbar. In the fortress, Kafil, of the city the Emperor erected another stone flag; close to the fortress on the south side was the Dhami Masjid, which excited the admiration of Timur. The Emperor Feroz Shah who died in 790 A. D., is buried in a fine domed tomb on the edge of the great tank of Jami 'Alauddin, constructed by 'Alauddin, which lies two miles west of Siri. After the destruction of Dhili by Timur, the authority of the Dhili sultans became very circumscripted, and after temporary Sayyid and Lodi capitals at Khatwa and Mehraunpur, south and northwest of Pithlabad, the ~~the~~ rulers of the second dynasty transferred the seat of power to Agra, and there the Moghul conqueror, Babur, and his son, Humayun, resided. After Shāh Shah the Afghan interloper, had driven out the latter, he built the Purana Kila at Dhili, south of the Citadel of Pithlabad, and converted the fine mosque with its beautiful polychrome decorations there. After his restoration in 963 A. D., Humayun resided at Dhili and met his death by an accident in the Purana Kila, known usually as the Fort of Indrapati. His imposing mausoleum erected by his widow, Jahangir Begum and his son, Akbar, stands in a garden enclosure a mile to the south, and is the first great architectural achievement of the Moghals in India. The building stands on a fine platform, and is surrounded by a white marble screen which runs along the large central chamber: it is built mainly of red sandstone sparingly enlivened with white inlay and decoration. Close to the mausoleum is the tomb and mosque of Jai Singh (934 A. D.), the mausoleum (ruined) of the great Moghul noble known as Khwān Khān, son of the famous Salim Khan who recovered the Empire of India for the young Akbar, and the shrine of Nizam al-din Chishti (died 724 A. D.). The tomb of the Saint and some Imperial graves here, and the Dhami Khān mosque of date anterior to the shrine, are of much interest and beauty. Four miles to the west of these is the tomb of Saifur Khān, the second Nawab of Awadh (died 1167 A. D.), one of the last Moghul works showing any architectural distinction; and on either side of the road leading to this, we find tombs of the Sayyid and Lodi Kings, who ruled at Dhili from 817 to 849 and 849 to 899 A. D.

The Emperor Akbar (963-1014 A. D.) preferred Agra to Dhili for his capital, and his son, Jahangir, preferred Lahore and Kashgaria, when he left Agra. It was to the Emperor Shahjahan, who had already constructed the beautiful buildings in the Agra Fort, that the last Imperial

Dhili, Shahjahanabad, owes its creation. Its splendid palace there, the Lal Kila or Red Fort, was built between 1638 and 1658 A. D.; the grand 'Jami' Masjid was completed a year or so later; and the other principal mosques of the city, the walls, and the chief palaces were raised during the next eight years. Though not, with the exception perhaps of the 'Jami' Masjid, of such perfection of simple beauty as the Mos Masjid or Taj of Agra, the striking walls of the palace-fort at Dhili made of red sandstone, two grand entrance gates to it, the Na'ib al-Khan in under gallery, the spacious Divan-i 'Amin and the elaborately decorated white marble Dargah-i Khana in it, will ever rank among the great architectural and decorative achievements of the world. The 'Jami' Masjid is one of the few great mosques in the world which is beautifully designed exteriorly as well as interiorly — the enclosed court measures 450 feet each way. The works subsequent to 1670 A. D. showed a sudden and marked decadence. The tomb of Salim 'Jami' (see above) is one instance of this, and the main entrance of Ghazi al-Din Khan (c. 1663 A. D.) is another, though a less pronounced failure. The reason of this was no doubt that Dhili ceased to be a truly imperial capital within fifty years of its creation. The Emperor Aurangzeb, who deposed his father before the original works were wholly completed, left it in 1690 A. D. for the Deccan and never returned; and at the time of the death of his son, Bahadur Shah, in 1702, the real power of the Moghul Imperial dynasty was practically gone. Whatever respect it retained was broken by the invasion of the Persian King Nadir Shah in 1739, and was finally shattered by the sack of Ahmad Shah Durrani in 1751. After this second agony Dhili, Rohilla Pathans and Mahadars all held possession of Dhili in turn, and the Emperor Shah 'Alam II was a refugee from his titular capital for no less than ten years. Finally in 1803 A. D. the British took possession of the place, and the titular kingship of Dhili ended in 1858, the last titular King Bahadur Shah II dying at Rangoon in 1862.

Fortunately Dhili was visited during the culminating period of its glory by a number of European travellers, and Herivel and Tavernier among these have left full and interesting accounts of the glories of the city and the state and magnificence of the Court. Many prominent features of the former, especially the palaces of the nobles, have disappeared since 1857 A. D., and the main street, the 'Andal' Chak, leading to the Palace has lost all its original attributes and attractiveness. It may be hoped, however, that in its new future as an Imperial city, Shahjahanabad will recover much of what it has lost in these respects.

DHYVA (also Dhyva) a. KHALIFA, a Kahlite, who became a companion of Muhammad after the battle of Uhud according to Muslim tradition or according to reliable authorities not till after the siege of Medina by the Kahlites. The rest of his *narad* is variously given and is as uncertain as all else that we know regarding this mysterious personage. He was a rich merchant of pleasant and distinguished appearance, a friend and apparently also a commercial partner of Muhammad's. The latter compared him to the angel Gabriel and gave credence to the story that the latter had several times assumed Dhyva's features. When Dhyva's caravan reached Medina, all the town ran to meet him leaving the Prophet unprotected. It is possibly in this that a passage in the Koran (liii. 3-11) refers. As a Kahlite he must have been perfectly acquainted with the districts bordering on the Syrian *limas*. His business allowed him to go about everywhere freely without arousing any suspicion and he therefore served Muhammad as a secret agent. According to the *Sira* he was entrusted with a mission to Jerusalem to demand that the latter should adopt Islam. There is no reason to accept this story as true, adorned as it is with legendary details. But in the course of his business journeys Dhyva was able to negotiate with a descendant of the ancient Ishmael Amra or with the *Amra* of the desert areas of Syria and soon afterwards we find the Arabs of those regions entering into relations with Medina. Muhammad was about to marry Dhyva's sister when death prevented him.

Dhyva commanded a small body of troops at the battle of Yarmuk and continued to play a part though a secondary one in the conquest of Syria; he is said to have been entrusted with the task of capturing Palmyra. Henceforth his career relapses into the mystery which shrouds the earlier part of his life. Possibly he went to Egypt as an isolated reference to him dates. It is surprising not to find him playing an active part or even mentioned in the reign of Mu'awiya, the friend of the Kahlites and diplomat. He is said to have died about the middle of this Caliph's reign in the year 670 — quite an arbitrary date — and to have been buried at Misra near Ibrahima. We do not know if he left any children, the contrary is the more probable. Dhyva was selected by the editors of the *Sira* along with him al-Hadrami, Amr ibn al-'As, etc. as typical of those innumerable secret agents employed by Muhammad to further his policy throughout Arabia and the lands bordering on it. When Dhyva's caravan was in danger he had been plundered by the Beduins, Muhammad wasted no time in organising an expedition to relieve him or to take their booty from the robbers. In spite of the efforts of the Traditionists Dhyva remains a legendary and almost mythical personage. Cf. the article *DHYVA*.

DĪK, the cock. He is the most universal and not-satisfied of birds; of feeble intelligence, as he cannot find his way to his hen-house when he falls from a wall, he deserves pardon for his impertinent treatment of the hens. When he wishes one of them to come to him, he throws a grain of corn to her; but he only does this so long as he is young and lusty. In the night he collects the peeps round him in a safe place and keeps watch at the door against enemies. He lays one egg in his whole lifetime, the cock's egg (*ḥafṣa* *ḥafṣa*). He proclaims dawn and it is one of his most remarkable characteristics that he appears his crowing exactly to the different hours of the night, whether the night is 15 or 9 hours long. The explanation of this is that, according to the Prophet, God created a cock — to be sure *ḥafṣa*, a white cock, whose wings are set with emeralds and pearls, as an angel in the form of a cock — beneath his throne, who flaps his wings when the night is at an end and proclaims the praise of God. All the cocks on earth hear this and answer by showing shaking their wings and crowing.

There are various kinds of cocks; white cocks possess particularly remarkable powers as Umm al-Bihar before them and they protect the houses; Salim cannot enter a house where there is a white cock. *Ḥawṣil* and *Ḥawṣil* give numerous details regarding the medical application of various parts of the body of the cock but the word is not found in *Ḥawṣil*'s edition of the *al-Bihar*.

Bibliography: *Ḥawṣil*, *Ṣiḥḥ al-Bihar* (ed. Wustenfeld), i. 412; *Ḥawṣil*, *Ṣiḥḥ al-Bihar* (ed. Calvi), i. 288. (J. Ruck.)

DĪK al-DĪNN, ("Cock of the Dinn"), a name of the Arabic poet of Syria 'Abū al-Naṣīb al-Rāḥimī. His ancestor Tamīm had adopted Islam in Mecca (q.v.) from Ḥalīd b. Maḥmūd al-Fihri, who became prefect of Kirmān and Ḥalīd (Mecca) under 'Alī al-Walīd in the year 15 (636-637). Dīk al-Dīn was born in 111 (777-778), spent most of his life in Hīra (Kirmān) and died in 155 (810-850) or 235 in the Caliphate of Muṭawakkil. According to his nephew 'Alī al-Walīd (*Ṣiḥḥ*, ii. 122) he was "a frivolous good-for-nothing, bent only on eating and drinking and other enjoyments, a dissipation of his inheritance". He was paid for his poems by the ten Hishmīdī Abū al-Ḥayy and 'Uṣayr b. 'Alī in addition to panegyrics on them, occasional lampoons and elegies on al-Naṣīb b. 'Alī b. 'Alī al-Dīn — the poet was a moderate Ḥafṣite — he also wrote erotic poems to the decadent taste of his period. For example a typical poem by him has survived (*Ṣiḥḥ*, ii. 126) which shows a peculiar mixture of Syrian-Arab *ḥafṣa* and Persian vice. They are verses to a beautiful boy, whom he had made overtures to in vain, and who had then been brutally violated by others. "Thou didst not even allow me *ḥafṣa* and kisses; now thou hast had to submit to middle and bridge being placed on thee (by others)". The Arab accounts

of him say that he did not feel himself the equal of other contemporary poets, particularly 'Aṭṭar Nizām, and illustrate this by the following anecdote: 'Abū al-Naṣīb visited Dīk al-Dīn when he was going to his prison al-Naṣīb in Egypt but the Syrian hesitated at first to receive the distinguished Baghdad poet.

The few fragments of Dīk al-Dīn's poems that have survived to us owe their principal interest to the fact that he champions the equality of his countrymen in the narrower sense, the Arabized Syrians, with the Arabs proper and sometimes also inveighs against the rivalry between North and South Arabians. The fact that he never left the narrow limits of his Syrian fatherland and never went to the East nor anywhere else to improve the great cause of the empire with poems, may be due not merely to his particular attitude but also to a sense of his inferiority as a poet.

Bibliography: *Ṣiḥḥ*, ii. 122—123; Ibn Ḥalīlī (ed. Wustenfeld), N. 304; *Ḥawṣil*, *Ṣiḥḥ*, ii. 131; Goldziher, *Al-Bihar* (ed. Calvi), i. 156. (A. Schindler.)

DĪKA. The platform, dome upon pillars and surrounded by a parapet, which stands opposite the mihrab of a mosque. It is placed either in the front or in the centre of the mosque. Also a long wooden seat or sofa placed along the wall of a room.

Used vulgarly for *Alān*, it denotes a running string tied round the body to fasten the drawers (*ḥafṣa*) in Muslim attire. The ends of this string or band are usually ornamented but are concealed by the outer dress. (A. S. F. F. F.)

DILĀWAR KHĀN, a name of 'Abū al-Dīn al-Dīn (a descendant of Ḥalīd al-Dīn al-Fihri), who was appointed governor of Māwa by Muḥammad al-Dīn IV. of Dīlī (1702—1715 A.H.). In 1702 he received his surname al-Dīn II. of Dīlī, who had died before 1702, with due honour in Dīlī, but in 1704 he made himself independent of Dīlī. He thus became the founder of the first independent Muhammadan dynasty of Māwa, which became extinct with his grandson in 1739. He reigned as king in Dīlī from 1704—1708, but does not seem to have struck coins in his name. Two inscriptions of his period have however been preserved in the *Ḥawṣil* (now called the *al-Bihar*) built by him in Dīlī. He died in 1708 and the story goes that he was poisoned by his own brother.

DILĀWAR PASHA, a Khorāsani, brought up in the Imperial palace, after leaving the Serai became successively governor of Cyprus, Baghdad, Diyarbakir, Rums and often again being governor of Diyarbakir took part in the campaign against Poland in 1621. During the siege of Chocim he was appointed Grand Vizier on the 1st Rabi' al-Kāda 1030 = 17th September 1621; on the revolt of the Janissaries against Sultan Osman II. in May 1622 the sultan demanded his execution; the Sultan handed him over and the Janissaries cut him to pieces on the 20 Rabi' al-Kāda 1031 = 19th May 1622. The English ambassador Rot

(Nageshiellous, 24) describes him as an earnest, able and moderate man.

DIMOTIKA (urk. Dymroga), the ancient *Δυμορριζες*, a town in Roum, in the province and castrum of Adrianople, 26 miles south of the latter town, near the confluence of the Vardar into the Maritsa; it is the capital of a *ḡazā* and a station on the Vode-Agias railway. The population is 8707, mainly Mohammedans. It has an ancient fortress now in ruins, seven large mosques and a reservoir which has now been converted into a prison. It was taken in 765 (1362) by Murād I. who built a palace there. Charles XII made it his headquarters from February 1713 to October 1714. — The *ḡazā* of Dimotika comprises 4 *nahiyas* (Kudat-burgaz, Karadzhikollit, Sahit and Kerekluk) and 43 villages and has a population of 26,551, the great majority of whom are Orthodox Greeks. In addition to vegetables, tobacco and the vine are cultivated.

DIN Behind the class of meanings given by the Arabic lexicographers under the form *ḍn* (see, for example, Lane, *Lexicon*, p. 944) lie three separate words. There is (1) an Aramaic-Hebrew loanword meaning "judgment": (2) a genuine Arabic word meaning "custom", "usage" which is cognate to (1), being related to the Hebrew *din* (cf. *ḡazā*, *ḡazā*) an entirely distinct Persian word meaning "religion". See Nöldeke in *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxviii, p. 534, note 2, and for the Persian word, derived from *daēnā*, *Compend. d. Iran. Phil.*, i. 1, pp. 197, 270; i. 2, pp. 26, 170; li. p. 644. Vollers contested the existence of *ḍn* as a genuine Arabic word and, showing that the Persian *din* "religion" was already in use in Arabic in post-Islamic times, held that the meaning "custom", "usage" was derived from it (*Zeitschr. f. d. Morgenl. Lit.*, p. 351). This conclusion naturally involved the Muslim exegetes of the *Qur'ān* in endless difficulties. Thus,

for example, in *Maḥḥi Yūsuf* (v. 31, cf. *Maḥḥi*, Rāḥ and Tubāḥ, f. p. 31), they naturally recognised a necessary meaning of "reckoning", "accountance", yet were in great doubt how to reach it. But under one or other of these three meanings all the *Qur'ānic* passages can be brought. Theologically, *ḍn* is defined as a divine institution (*maḥḥ* *ḥakm*) which guides rational beings, by their choosing it, to salvation here and hereafter, and which covers both articles of belief and actions (*Maḥḥ* of Tech. Terms, p. 503). It thus means "religion" in the broadest sense and is so vague that it was felt necessary to define its difference from *ḍn* (q. v.) "religious community", *maḥḥ* (q. v.) "school of canon law" and *ḥakm* (q. v.) "system of divine law." It may mean any religion, but is used peculiarly for Islām, "the religion with Allāh" (*ḥakm*, li. 17). It covers three things: *ḥakm* in its five elements, Witnessing to the Unity of Allāh and to the prophethood of Muḥammad, Worship, Post-rite, Fasting, Pilgrimage; *ḥakm*, Faith; *ḥakm*, Rightdoing. These three make up the aim of Muslim, see the tradition of how Muḥammad answered Gabriel's question (*ḥakm*, ed. Chwolson, p. 27). Similarly, all religions, as supposed an intellectual knowledge, meaning what is gained by prophets through major inspiration (*waḥy*) and by saints through minor inspiration (*ilḥām*) and received by others on authority from them, can be called *al-ḥakm al-dīnī*.

Dīnī, *ḥakm*: Besides the references above, Joyaboli, *Manth. der islamischen Geogr.*, pp. 40, 54. (D. B. MATHIAS.)

DINADIPUR, district in Eastern Bengal, India, area, 3,045 sq. mi. (1901), 1,687,863, of whom about one-fifth are Mohammedans. At the beginning of the 15th cent. A. D., Kāḥḥ Kāḥ, a Hindu landowner of Dinadipur, defeated the Mohammedan king of Bengal and seized the throne, on which he was succeeded by his son and grandson, Ḥalāl al-Dīn Muḥammad and Shams al-Dīn Ḥamīd (1443—1443 A. D.). The tomb of a pīr named Nēkmat is frequented by pilgrims, and is also the scene of an annual cattle fair, at which the attendance reaches 200,000 persons.

DINAR, from the Greek-Latin *denarius* (*denarius*) the name of the unit of gold currency of early Islām. Why the Arabs called the gold piece *dīnār* is not quite clear from Greek or Latin inscriptions or literary sources. Many once (*Hist. Nat.*, li. xxviii, § 13) call the name *denarius*; and we frequently find the expression *denarius aureus* or *indicus denarius*, in the east as well as the equatorial *denarius* = *ignota* *denarius* but the Arabic and Syriac name *dīnār* seems to point to the fact that in Syria the gold coin (after the reform of the currency by Constantine I. 309—319) was usually called simply *denarius*.

The Arabs knew and used this Roman gold coin before Islām (*ḥakm*, li. 68). All Muslim traditionalists agree that the currency reforms of the Caliph 'Abd al-Malik which were effected in 77 (996) left the standard gold coin unaltered. The exact weight of this coin may be readily

ascertained from the great exactness with which the earliest reformed dinars were struck; the dinar is then found to weigh 4.26 grammes (66 grains). This corresponds exactly to the actual weight of the contemporary Byzantine solidus which was again based on the later Achaean drachm of 4.17. The Egyptian glass-weights (*paragon* + v.) enable us to test this. As gold coins in the East have always passed by weight and not by tale, the weight of the current dinar at times differed considerably from the legal weight of 4.26 (the contrary assertion in Makaddas, ed. de Sauter, p. 240 is only exceptionally true).

The oldest dated dinar known to us dates from the year 76 (695) and still bears the Byzantine type (figure of the Caliph); a similar piece is dated 77, in the same year appear the reformed dinars of 'Abd al-Malik. These new coins, unlike the *dirhams* (q. v.) do not bear the mint; it is practically certain that the Umayyads struck gold coins only in Damascus and Hama and after 100 (718) in Cordoba also. After the fall of the Umayyads the chief mint for gold seems to have still for a period been Damascus, but in 146 (763), it was transferred to the newly founded Baghdad. In the reign of Ma'mun (198—218 = 813—833) the usage of gold was decentralised and a new type, similar to that of the *dirhams* prescribed; after 312 (827) gold was struck in the most important of the provincial capitals. The secondary dynasties also made no alteration in the dinar; only in South Arabia was another standard (2.47 grammes) (46 grains) used.

In Baghdad the last dinar was struck soon after the fall of the 'Abbasids; the word *dinar* disappears from their gold coins about 661 (1262). In Egypt the last dinar was struck in the reign of Saif al-Din Iltutmish (747 = 1346). Perhaps as early as the reign of al-Aghaj Sultan (764—778 = 1362—1371) but more probably not till that of al-Aghaj Sultan (1435—1442 = 1447—1453), a new gold coin was introduced, the *naqsh* (3.11 grammes = 53.1 grains) which displaced the dinar throughout Eastern Asia. The *naqsh*, which had never really gained a proper footing there, disappears from India in the reign of Nāṣir al-Din Mahmud (644—664 = 1246—1255), who introduced the national gold *tanka* (3.11 grammes = 53.1 grains) as the official standard coin. In the Maghrib dinars were struck to the end of the fifth century but the reckoning by dinars remained in use till a much later period.

Multiple and subdivisions of the dinar were at all times in use. 'Abd al-Malik appears to have introduced the *triens* (*dirham*) of 1.5 grammes (22 grains) as may be presumed from a piece of the year 94. In the Fatimid period the quarter dinar (append. 1 gramme = 15.1 grains) was a common coin while in Sicily it was almost exclusively struck and survived into the modern period as the *lari d'oro*.

The standard was always very high, the gold being as pure as the technical processes rendered possible.

In the history of Mediterranean commerce the dinar plays an important part and was imitated by many Christian rulers under the name of *denarius*.

In law the legal dinar is still one of 4.26 (661). In banking an equivalent for amounts given by Arab authors the dinar must always be taken as

4.26 (66) but gold unless another value is expressly stated.

DINAWAR (often also less correctly written *DAIKAWAR*), in the middle ages one of the most important towns of Djibal (Medea), now in Persia. Its exact location is according to the latest readings by H. Strass (see *Revue*) 48° 15' East Long. (Greenwich) and 34° 35' N. Lat. (nearest line on the direct line between Kermān and Kermānshāh) is the S. E. and Kirmānshāh (Kermān) to the S. W. and is almost equally distant from both, namely 30—32 miles. It lies on the northeast edge of a fertile plain some 3000 feet above sea-level, watered by the Abū Dinawar. This river, which takes its name from the town, enters a narrow ravine (long. 11 = Part of 1.) at the southwest corner of the plateau, which afterwards opens out into a broad valley, and finally joins the Kermānshāh which belongs to the Karakūh watershed. When the Khurāsānī (ed. de Goeje, p. 176) says that the *Kahr al-Sud* = Karakūh flows in the neighbourhood of Dinawar, he is obviously considering the Abū Dinawar as its real source.

The foundation of Dinawar, which appears also in Syriac sources (as *Dinawar*), dates from the pre-Muhammadan period, to the days of 'Omair it was the most populous town in the district of Kirmānshāh. Immediately after the decisive battle of Nihāvand (621 = 642) it was surrendered to the Arabs by the Persian governor. In Ma'mun's reign it received the new name of Mah al-Kufa, because the taxes raised from it were applied for the benefit of the citizens of Kufa, more particularly for payment of the garrison there. In the administrative division of the Caliph's empire Mah al-Kufa appears not only as the official name of

the town of Dinawar but also as that of an administrative division of Dišlā with two districts: Dinawar, comprising the upper lands and Karmīn (the lower). In the west, Māh al-Kūfā was bounded by the district of Karkar, in the east by that of Hamadhān, in the south by Mānbadhān and in the north by Adharmādhān, thereon cf. Karkar in *Bibl. Geogr. Arab.* (ed. de Goeje), vi. 243 *et seq.* As to the word Māh, this is not to be explained, as do the Arab authors, as a Persian noun equivalent to the Arab *ḥaḥ* = 'town, capital'; Māh rather corresponds in form and meaning to the ancient *Māda* = 'Media'. All geographical names which are undoubtedly compounded with Māh and can be fairly definitely located (cf. for example, Māh al-Muḥayr = Mānbadhān, a name similar in origin to Māh al-Kūfā) belong to Media. Māh al-Kūfā is therefore to be interpreted as: Media of Kūfa, i. e. that part of Media which belongs to Kūfa on Māh of particularly Noldke in the *Zeitschr. f. Deutsch. Morgenl. Ges.*, xxv. 349 *et seq.* and in his *Geogr. der Perser und Araber am Zeit der Sasaniden* (1879), p. 103, 23; J. Marquart, *Asienstudien* (Berlin, 1901), p. 18-19.

Dinawar likewise enjoyed considerable prosperity in the Umayyad and 'Abbāsid periods. When Ibn al-Baṭṭā' wrote (9th-10th century), it was only about one third less than Hamadhān. Bukhārān praises its well built houses and the rich orchards around the town; he also, as does Kāwīn, makes particular mention of the excellent cheese manufactured there. The population was a mixture of Persians and Arabs; as Mas'ūdī (op. cit., iii. 253) tells us, the Kurdish tribe of Shūshān also led a nomadic life to the country round. The confusion that broke out in the last years of al-Ma'mūn's reign brought ruin to the town. When the rebellious general Mardāwīd of Dišlā seized the whole province of Dišlā after defeating the troops sent against him by the Caliph, Dinawar also fell into his hands (319 = 931) and several thousands (the figures vary from 7000 to 25,000) of the inhabitants perished soon afterwards. Mardāwīd (Mānbadhān) a prince of the Kurds living in this region founded a small independent kingdom of which the capital was Dinawar and was able to retain possession of it for almost 50 years (till his death in 369 = 979). In the 11th (11th) century the town was still inhabited, according to Mas'ūdī its doors seem to have been sealed and the houses of the Mongol invasion under Timur.

The present ruins of Dinawar, which are quite uninhabited, were last visited by de Morgan and Th. Sureau. Sureau (op. cit.) gives the following brief account of them: 'The site of Dinawar is only indicated by mounds of earth, which have several times been ransacked in the search for coins: numerous finds are still made, especially by peasants tilling the fields'. According to the same traveller, traces can still be seen in many places in the above mentioned Feḡgī Dinawar of an ancient road leading out of the rock, which probably connected Dinawar with Baghdad.

AL-DINAWARĪ, AND HANSA AḤMAD AL-DINAWARĪ, Arabic philologist and astronomer, probably born in the last decade of the 3rd century of the Hijra at Dinawar in the Persian Irāq, received his education in philology from the father of Ibn al-Sikkīn, the Kūfā grammarian, and from the latter also, in 335 he stayed in Baghdad to make astronomical observations, which he recorded in his *Kitāb al-Raḥīl*. He afterwards seems to have spent some of his time in his native town where his observatory was pointed out for several centuries later. The dates given for the year of his death vary; but the 16th Jumādā I 422 = 10th July 895 appears the most reliable. His literary activity, like that of Ḥaḥḥ, with whom he has often been compared, combined antiquarianism with instruction. Only his *Kitāb al-Asḥār al-Ḥadīṭ* has survived in its entirety; it includes three periods of the history of the world for which tradition affords material for an exhaustive survey. It also devotes particular attention to matters of special interest to Persians. He therefore gives a full account of the history of Alexander, of the Sasanids, the conquest of the Irāq by the Arabs with a detailed description of the battle of Qadisiya, the battles between 'Alī and Mu'awiyah, and the Kharijites, the death of Husayn, the slings of the Arabs and of Mu'awiyah, the fall of the Umayyads and the intrigues of the 'Alids, particularly in Khirāsān in a brief history of the Caliphs (cf. W. Wright's edition, London 1885; prof. varr. and index by I. Kraus, Leipzig, 1913). His famous *Flora* (*Ḍ. al-Nabāt*), the original of which is lost but numerous extracts have been preserved in the later geographers, particularly Ibn Sīdā, and also in Ibn al-Baṭṭā', was of much greater importance to science. Like the much less comprehensive works with similar titles by Abū Zaid and Aḥmad, it was the result of a philological study of the old poets and was intended to explain the numerous plants mentioned by them. It was therefore confined to the flora of Arabia but included also plants which had been brought from foreign countries and acclimatized there. His clear and exhaustive descriptions, for which he possibly borrowed somewhat in older works, were not based on his own observations but were compiled from information obtained by him or his predecessors from Arabs of the desert. As the latter were very keen observers of all that surrounded them and had the power of accurate description, they had a terminology for plants and their parts which was almost scientific in its precision. Besides the descriptions of plants, which have for the most part alone survived, the work, which was still accessible to the author of the *Asḥār al-Ḥadīṭ* in six large volumes, in addition to numerous illustrative quotations from the poets, must have contained many philological and

historical comments on the latter. It began with a detailed account of the kinds of soil and formations of Arabia, its climate and distribution of water, and the general conditions necessary for the growth of plants. It then proceeded to the classification of plants in general and the morphological structure of the individual plants. The main portion of the work treated of the individual plants in three groups: plants cultivated for food, wild plants and plants with edible fruits. The second group dealt with the plants in it according to their places in which they are found, then according to their nature, and partly according to their commercial value. The work, on which Abū Ḥ. Ḥamza al-Bīrām wrote a biting criticism, dealing only with points of philology, in a section of his *Kitāb al-Faṣḥāh* 'alā *al-Ḥadīth al-Kunūz*, became the main authority on plant-nomenclature for later lexicographers.

Biographical: Völz, *Lebensev. al-Bīrām al-Bīrāmī*, ed. DIRĪHAM (Arabic) a silver coin of the last Pahlavi al-Bīrāmī (q. v.), p. 137; his full name was Abū Ḥ. al-Bīrāmī al-Bīrāmī al-Bīrāmī al-Bīrāmī. As to his origin, his pure Arab blood is emphasized and his epithet al-Bīrāmī al-Bīrāmī also seem to point to his descent from the ancient rulers of Khaz. He had risen from the ranks of the Bāghiya and was one of the confidants of Fakh̄r al-Razakī (q. v.), who appointed him generalissimo in 351-1458. In the same year he defeated the Bāghiya near Qibara. In spite of his close relations with the Banu Razakī he was one of Shāwar's (q. v.) chief allies in bringing about the fall of Razakī b. Fakh̄r, whose teacher he had actually been in all military arts. Under the new ruler he received the office of *Ḥakīm al-Dīn* but apparently did not consider that his treachery had been sufficiently rewarded, so he rose against Shāwar nine months later (Rumayṣ 358=Aug. 1143), drove him out of the country, put him to death and seized the vizierate. The Caliph confirmed him in this position and granted him the title of *al-Bīrāmī al-Bīrāmī*; his personal title of *Ḥakīm al-Dīn* passed to his brother Nāṣir al-Dīn. Fortuna did not long favour Dirghām. His attempt to make an alliance with Nūr al-Dīn, with whom Shāwar had taken refuge, was a failure, the hostile attitude of the Bāghiya in Egypt drove the junctura over to dreadful deeds of cruelty, which deprived the land of its best spirits. The invasion of Amalīk I, king of Jerusalem, who was going to compel by force of arms

the payment of the tribute previously promised him, brought further trouble. He inflicted heavy losses on the Egyptians at Hittah and only retired when Dirghām resorted to the desperate measure of herding down the embankments and flooding the country. But even this reached the verge of the success of the efforts of his enemy Shāwar in inducing Nūr al-Dīn to undertake a campaign against Egypt and now too late he sought to make a permanent alliance with Amalīk by promises, which meant a considerable humiliation of Egyptian power; Shīkh al-Dīn and his army invaded the country. Nūr al-Dīn and his army, most of the leaders of which had been won over to the enemy, suffered a severe defeat at Hittah and afterwards Shāwar entered Fustat. Dirghām's adherents gradually melted away; he collected the few remnants of his former popularity when he sought the hands of the West to replace his resources; in vain also he implored the help of the Caliph. When finally, abandoned by every one, he fled, he was murdered by a mob at the tomb of the Sāṭira Nāṣir al-Dīn al-Bīrāmī in Rumayṣ 359=May/June or July-August 1143. His head was cut off and carried through the streets of Cairo; his body was not buried till three days later near the Ḥakīm al-Dīn and a stone erected over the grave.

Dirghām is unanimously described as a brilliant and powerful personality. His extraordinary skill in all manly sports is particularly emphasized; he was a remarkably brave man, a great talent for learning, an excellent poet and calligrapher.

DIRĪHAM 1. A unit of the silver currency in the Arab monetary system. The name (Gr. *δραχμή*, Pers. *dirām*) was in use from ancient times, while the coin to which it was applied was borrowed by the Arabs from the Persians. The derivation of the legal weight of the dirham is more difficult than that of the dinar, as the dirhams were not struck very accurately. The definition of the legal dirham is very variously given by the historians, but all agree that the weight of the dirham was that of the mithqāl as 7:10. But since mithqāl (q. v.) has many meanings, this equation can only have a meaning if the mithqāl is the legal dinar, i. e. the Abbasid mithqāl of 4.25 grammes. We thus obtain as the most probable weight, 3.00 grammes, which best agrees with the extant coins and glass weights as well as with the coin-weights of the time of al-Muṭaṭṭil (295-320=695-720) discovered by E. J. Rogers in the Fayyūm. Sauvage took as the basis of all his calculations the figure 3.025, arrived at by the Egyptian Commission of 1845, and thereby invalidated his results from the very first inconsiderations, who points out Sauvage's error, has arrived at the figure 2.47 by a series of ingenious calculations, but this does not agree with the necessary condition of being $\frac{7}{10}$ of a mithqāl.

The legal *dihām* of 2.07 was perhaps first instituted by the Caliph 'Umar. 'Abd al-Malik ordered that the *dihām* of this weight was to be the only legal silver coin. There can be no doubt about the derivation of the Arabic from the Sasanian *dihām*. The latter was introduced by Artabān I (326–342 A. D.) on the standard of the new Attic drachm of 4.75 grammes and remained almost unchanged till the fall of the Sasanian empire (the drachm of Artabān III of the year 638 weigh 4.10 grammes). The Arab governors in Persia retained the Sasanian type but struck on a reduced standard (3.04); many of their coins weigh roughly 2.07, and thus *dihām* with the legal *dihām*.

The earliest purely Muhammadan *dihāms* (apart from doubtful and isolated specimens) date from the year 75 (694); after this date coinage of the new type were struck in all the provinces although the Arab–Sasanian drachm continued to be struck in Persia for some time longer (to Tabaristan till about 180 = 796).

The copper *dihāms* of the 9th and 10th centuries were struck by the Umayyids, Zangids and other Turkish dynasties of Asia Minor were quite unique. They are large copper pieces averaging 12 grammes in weight, with types and probably specially destined for use in commerce with Christians.

The *dihām* played an important part in Northern and Eastern Europe where it formed the sole currency from 600–1000 A. D.

Multiples and subdivisions of the *dihām* are rare in the early centuries of the *dihām*. The most usual division was that into *mithqāl* (*dihām* = 2 *mithqāl*) and the commonest small coin the half. The *dihām* disappears about the same time as the *mithqāl*. In the early days of Islam the relation of gold to silver was fixed at 14:1 (20 *dihāms* = 1 *dirham*).

A *dihām* is also the name of a weight, (*dihām* full) weighing 3.04 grammes and totally distinct from the coin of the same name. It survived, with local variations down to modern times as an apothecary's and goldsmith's weight. The French expedition found it in use in Cairo in 1799, weighing 3.04 grammes and the Commission of 1845, 3.04 for Constantinople at the present day its legal weight is 3.07 grammes.

DIU (*Diwa*) is an island with an area of 25 square miles, situated at the southern point of the Kathiawar Peninsula of Godhar, India. It was taken from the (Arabs) Rajputs by the Muhammadans in 1330 A. D. In the time of the Sultan Mahmud Begara of Gujarat (1435–1513 A. D.) it was a wealthy Muhammadan port but shortly afterwards it was taken by the Portuguese, who have held it ever since. It was of importance in the 15th–17th centuries as the port of call of vessels trading between India and the Persian Gulf and Red Sea.

DIVAN (See *DIWAN*.)

DIW (D; older form *diw*, Avestan *diu*, *diu*, *diu*, a god), in the Iranian religion, the name of evil spirits, the powers of darkness, the creatures of Anahita, the personifications of evil; their number is legion. At their head is a group of seven principal demons including Ahriman, opposed to the seven *Amshas*. They were subject to *Amshas* (Firdausi, *Shah-Nama*, ed. Mohl, I 49, cf. the Muslim legend of Solomon).

In the Iranian epic, the white *diw* (*diw-i-afshar*) comes to the help of the king of Minandis against king Kai-Kavus; his country is inhabited by *diw* skilled in magic (Firdausi, *Shah-Nama*, I. 497); he is defeated by Rostam who also fights against two other *diws*, Akvan (Akavan) and Arhang. King Tahmuras is nicknamed *diw-kand* "the conqueror of the demons", because he overcame them in a pitched battle with the help of magic; the hostile army was commanded by the black *diw* (*diw-i-afshar*); it was they who taught the king how to write (*Shah-Nama*, I 43–45).

Bibliography: W. Jackson, in the *Grundriss der Iran. Philologie*, II 165, 176, 196, 640, 663, 682; Spiegel, *Erdbuch der Iranischen Kunde*, II. 116–136. (C. H. HART.)

DIWÂN (*Divan*) (from a hypothetical Indian word *Divan*, connected with *divi* "writer", which is connected with M. Andrews with the Assyrian *diw* public registers of receipts and expenditures, kept in Greek (Syria and Egypt) and in Pahlavi (Persia) in the early years of the conquest, then translated into Arabic and continued in that language from this time on 31 = 700, al-Buhārī, p. 193, 300; al-Masūdī, p. 349). The name next passed to the office of the treasury and thence was extended to the government of the 'Abbasid Caliphs and even in Saladin's time to the Caliph himself (The *Shah-Nama*, transl. de Slane, II 104). *Divan al-Zaman* is the office where the register of revenue and expenditure was kept; *Divan al-Tawfiq*, the office of the State Chancery, the head of which had to audit the accounts of the governors (A. v. Kromer, *Unternehmen*, I. 193). The *Divan al-Hay'*, established by 'Alī b. al-Minister of the 'Abbasid Caliph al-Muqtadir, administered certain estates which that minister had made *Wafq* (al-Fakhri, p. 313). The *Divan al-Aqadim* "Office of the Seal", constituted by Mu'awiyah, survived till the middle of the 'Abbasid period.

In Arabic, Persian and Turkish, *Divan* also means a collection of the works of a poet, usually arranged in an alphabetical order of the rhymes. The word further means a large building, where customs were collected, foreign merchants put up, also used as a warehouse and exchange and *divan* was practically synonymous with *cham* or *darbar*. It is used with this sense more particularly in the Maghribi (Jazy, *Suppl.* I. 479).

DIWANI (See *ARABIA* (ARABIC ALMANAC), p. 387.)

DIWRIGI, a town in Asia Minor, the

capital of a *Khay* of the province and *midyah* of Suwayh, near the *Walla-Imrah*, a tributary of the *Kam-Su* (Western Euphrates), lies in the bottom of a valley surrounded by high mountains; the population is 5,600 of whom 3,000 are *Sunnis* and 2,600 *Shi'as*. In it are the ruins of a fortress the surrounding *Walla* of which above survives, the mosque of the Amir *Shah-Bakhsh* (1634-42) built in 576 (1180) or 596 (1200), and the mosque of *Agha Mirza* & *Sultana Shah* (1714-24) built in 1136 (1728) of yellow freestone and well preserved; it has been raised on several occasions under the *Mughal* Sultans but is now used as a public granary. A tomb of the same date in an old Muslim cemetery, an occasional building with a pyramidal roof of stone, is the mausoleum of the Amir *Kam-Su* (d. 594 = 1198). It is mentioned by the *European* historians under the name of *Sephatic* to mean so many of the *Mughals* returned called the *Pouffians*. The early Arab geographers knew it by the name of *Adri* and believed that the main source of the Euphrates was there (*Yakut*, l. 8; *Im Routh*, p. 93; *Guy Le Strange*, *Jour. R. As. Soc.*, 1896, 733; *Khay al-Bihar*, iv. 34). Conquered about 114 (1071) by the Amir *Manghitshah*, a *Saltuk* general, who founded a dynasty bearing his name there, it afterwards passed under the sway of the *Saltuks* of *Rum* (625 = 1228); *Bayan* I. regained it for the *Mongol* empire in 1292 (1297) at the end of the *Tamerlane* campaign (Said al-Mun, *Tari al-Tamim*, l. 130). It was held for a time by Egypt; we have inscriptions of *Sultan Baybars* (1244 = 1250) and various governors of *Khay al-Bihar*, *ed. Ravanne*, p. 51; *Khatib-Rumi*, *Dir al-Salt*, p. 295) and taken in 922 (1516) by *Selim* I. It was long believed to occupy the site of *Nicopolis*, the town built by Pompey to commemorate his victory over *Mithridates*; but the latter has now been definitely located to the southeast of *Endere*. — The *Khay* comprises 9 *nahiyas* and 225 villages with a total population of 48,907, of whom 23,320 are *Sunnis* and 25,587 *Shi'as*. It has market gardens (tomato, melon and cucumber), vineyards and wheatfields all of which are very fertile. In the mountains there are deposits of iron ore and lead-ore, which appear to be no longer worked.

(C. L. HENNING)

DIYA or 'Aqi is the bloodwrit or compensation paid by one who has committed homicide or has wounded another. In the Diyahs the price paid by the homicide is said to have been ten she-camels. 'Abd al-Muqaffi redeemed his son 'Abdallah by the sacrifice of ten she-camels, but, as he had to repeat the sacrifice ten times, a hundred she-camels was henceforth considered the equivalent of a life; and this is the amount laid down in a letter written by Muhammad to 'Amr b. Huzayfah. The same letter fixed the compensation for a blow generating the hair on a forehead at one third of that amount, for the loss of an eye or hand or foot at half, for a tooth or for a wound exposing the bone at five camels. 'Amr put the money equivalent of a hundred camels at 1000 dinars or 12,000 dirhams — the

former payable by the 'people of gold' (the people of Egypt and Syria) and the latter by the 'people of silver' (the people of Asia), payment being spread over three or four years. Camels were not accepted as payment from these 'people of the treasury', gold was not accepted from the 'people of silver' nor silver from the people of gold, and neither gold nor silver from the merchants, who paid in shekels. These camels must be of a definite age and condition, twenty-five shekels a year old, twenty-one two years old, twenty-five three years old and twenty-five four years old — the first intended households for international commerce twenty shekels one year old, twenty-two years old, twenty he-camels two years old, twenty she-camels three years old, and twenty she-camels four years old.

A woman receives the same compensation as a man up to one third of the Ditya of 100 caught; if above the third, then she receives half of what a man does. Thus it is in the system of Mable: in that of Shyde she receives in certain cases half a man's Ditya, e. g. five candles for the loss of a finger instead of ten (cf. Laws, art. 10000). A master of an insane person is not personally liable to give compensation in ordinary circumstances. The Ditya for the latter is paid by the state. If a master and a person of age together kill a Muslim intentionally, the latter is put to death, the former paying half the Ditya. Similarly if a slave and freeman kill a slave intentionally, the former is put to death, the latter paying half the value of the murdered slave.

The life for wounding a slave is so to estimate the loss is a twentieth of his value, for a wound penetrating the brain or sinews is fatal, and so on in proportion to the loss to his market value. The law of retaliation holds between slaves as between free persons. If one slave kill another, the owner of the latter may demand the life of the former, or the value of his own slave, or the owner of the former may surrender his slave in compensation. If a Muslim slave wound a Jew or a Christian his master must pay compensation, even if he have to sell the slave, but may not bind over his Muslim slave to them.

If a Christian or a Jew be killed, his blood is as full as that of a free Muslim. A Muslim may not be put to death for an infidelity unless he have killed him treacherously. The blood of a Magian is less precious. The compensation due to these three classes for minor injuries is in the same proportion.

In cases of homicide or wounding unintentionally the perpetrator alone is liable to fine, and if he cannot pay, the fine remains a debt against him, but his kin may pay it if they wish, for the sake of peace. In this respect, his nearest kin are his brothers on his father's side, then all the male descendants of his father's father, and so on.

A murderer or homicide cannot inherit the life of his victim, nor can the former inherit his property, since that might have been his motive in killing him.

The *Diyat* is of two kinds: *Diyat al-'A* and compensation for an intentional injury, and *Diyat al-Khays*, compensation for an unintentional. The *Diyat* is full is paid not only for a life, but also for the destruction of the eye, of the eye of a married person, of the tongue and of the two ears if the hearing is destroyed. If the right of

one eye be destroyed the Diya is a hundred strikes, and that for a deep wound in the face, by more than for one in another part of the head.

Women and children are not liable to pay Diya. Employers are liable for injury to minor employees. In the case of a riot between two parties the injured or killed should receive *lagi* from the other side. Owners are responsible for their animals, and those who cause them for accidents. There are many injuries for which no Diya is named and these cases must be referred to the Muftahid.

(C. H. Wate.)

DIYALA, one of the most important tributaries on the left bank of the Tigris. Its source lies in the centre of the Persian province of Asidin (see above, p. 427). The main stream (called at first the *Gihir* or *Gawhid*), rises to the west of *Asadabad* (34° 30' N. lat. (the latitude of *Hamadan*) and at first flows to the northwest. A little above the 53° N. lat. it is joined from the north by the *Ab-i Shikran* which takes its name from a place named *Shikran*, and rises in the hills southwest of *Sikra* (*Sikra*); thenceforth the latter is the name almost exclusively used for the Diyala. After bending to the southwest the river again resumes its previous northwesterly course and is joined at its furthest north point by the *Yar* of *Yarad* which flows from the *Zaribar* (*Zaribar*) Lake to the south. Its confluence with the latter has a decided effect on the future course of the Diyala, for its originally northwestern direction is changed to a southwestern and ultimately becomes almost direct south. The Diyala, the whole of the upper course of which has hitherto been confined between high mountain walls, now enters a long, high-lying valley, which ends in the narrow *valley of Hamra*; here it receives on the left the waters of an important tributary, the *Zamakhan* (*Zamakhan*). The latter is made up of little streams rising in the *Karind* district. The upper valley of the Diyala may be said to end at the mouth of the *Zamakhan*; its middle course which likewise for the most part flows through a mountainous country ends where it breaks through the *Dijel* mountains.

The Diyala next rushes through the broad valley of *Shahr*, in which it is further increased by the *Tand* (or *Tad*) (whose source lies above *Sulaimaniya*), which flows from the north through *Shahr*; it next flows through the western Zagros ranges. A few hours' journey above the mouth of the *Zamakhan*, it begins to form the present boundary between Turkey and Persia and continues to be the frontier till it reaches 34° 30' N. lat. At *Zaqum* the Diyala is joined by the *Kulwan*. The latter rises south of *Karind* and takes its name from the once important Babylonian frontier town of *Kulwan* (q. v.). Soon after passing *Kulwan* (see *DIYALA*) the Diyala breaks through the *Dijel* (mountain) and crosses the Babylonian plains through which it sinks with sluggish course almost imperceptibly

to the Tigris, with which the last 80 miles of its course is almost parallel. It is only on the lower part of its course beginning at *Kulwan* that the Diyala is called by this name by the people on its banks; above *Kulwan* it is known only as the *Shikran*. Although in Babylonian a vast amount of water is taken from the Diyala for irrigation purposes, when it flows into the Tigris it is still more than half as large as the latter owing to the plentiful supplies it receives from the abundant mountain streams of its upper and middle courses. The place where it joins the Tigris, in 33° 15' N. lat. 3 hours' journey below *Baghdad* (according to the Arab geographers: 3 parasangs = 12 miles), and about halfway between *Baghdad* and the ruins of *Ctesiphon*, is, according to *Cliff* (*Le Provinces de Bagdad*, Cairo, 1908, p. 88), called *al-Mahalla* "the confluence". A short distance above this point there is a bridge of boats across the Diyala.

After its entrance into the Babylonian plains the Diyala from the earliest times has been extensively used for irrigating the surrounding districts; canals and dams were built to regulate its flow and to prevent devastating inundations. This irrigation system was in its best in the *Abbasid* period. After the Mongol period the canals and dams gradually fell into disrepair; the inevitable result was that many fertile stretches of land became desert and *swamps* (*bars*) sprang up in places. Even at the present day no decided improvement has yet been made.

The Diyala is connected with its neighbouring Tigris tributary, the *Asi* (or more) canals, which however are usually dry except in the season when the snow melts (cf. above, p. 125). The great *Kut-Nahrwan* Canal, which dated from the *Sassanid* period, connected the Diyala with the Tigris by numerous *subcanals* in both sides. This great waterway, which is now in many places choked with mud and quite dried up, but whose remains may still be clearly recognised (according to *Hersfeld's* theory, it is a former bed of the Tigris), leaves the Tigris 5 miles below the modern *Imam Dar* (north of *Samarra*) and runs parallel to it as far as the district of *Kut al-Amra*. The water still left in the *Nahrwan* returns to the Tigris at the point where it breaks up into the *Shahr al-Ira* and its eastern branch, the modern main *Imam Dar* and *Nahrwan*, names originally used for the upper and lower courses of this canal, and find the Arab authors also applying to a particular part of it the two names of the Diyala familiar to them (*Diyala* and *Thurath*). This is explained by the fact that the *Kut-Nahrwan* below *Bo'z* (see above, p. 610) ran for 20 miles along the bed of that river. The canal part of the Diyala may still be traced from *Bo'z* (south of *Bo'z*) to the ruins of *Shikra* (N. W. of *Baghdad*); in ancient times the river has however left its ancient bed and between *Bo'z* and *Shikra* it flows in another channel from 2—2 miles west; cf. *R. Leprieux's* map (eastern sheet) in *M. F. v. O. p. 116*.

In the *Abbasid* period the Diyala also watered the suburbs of *Baghdad* on the eastern Tigris by two canals, *Nahr Khali* and *Nahr Im*, which in their turn by means of further smaller canals filled the streets of the Caliph's capital with a network of small waterways.

particular veneration; the second called Hamrawat came from the Karu-Dagh in the south of the town. The banks of the Tigris are covered with gardens, which grow melons; the most beautiful is the *Kishu-Naghi* "garden of basils." Two temples are venerated, that of Shalibi, son of Khalid b. al-Walid, in the mosque at Khadid inside the citadel and that of the Persian historian Ibn al-Munkhal (Abu Manajil al-Mu), who was born at Lar in Persia, retired to a Jewish monastery and is buried near Shalibi Khadid (Bawliya, *Sefer ha-Muqdam*, iv, 53, 55).

(C. HARTZ.)

AL-DIYARBAKRI, MUHAMMAD b. MUHAMMAD b. al-HASAN, born at Diyar Bakr, afterwards took up his abode in Mecca, where he died (1374) and died some time after 982 (1574).

He was a Hanbali in Maliki Khalifa, who is followed by Wittenfeld, says that Diyarbakri, who completed his *al-Khawarizmi* on the 5th Sha'ban 940 = 27th February 1534, died in 966 = 1559, but at the various recensions of this work that have survived in 96 months the accession of Sulaym Murad III, which did not take place till 982 (1574), the author cannot have died before this year unless the appendix to the work is a copyist.

He wrote the following works:

1. *Tarikh al-Khawarizmi fi al-Asma' wa al-Afkar* (var. *Asma' wa al-Afkar*, *al-Khawarizmi*), a biography of the Prophet in which the author, although very old, has endeavored to weigh the various accounts, and to distinguish the good from the bad; the whole is followed by a short history of the Caliphs to the accession of Sulaym Murad III. The work comprises: 1. an introduction on the creation of the light (*nur*) of the Prophet; 2. three *asas* or foundations: a. events which took place between the birth and the mission of the Prophet; b. from the mission to the Hijra; c. from the Hijra to the death of the Prophet; 3. Conclusion: the four Caliphs, the Umayyads, the Abbasids, and other dynasties to the accession of Sulaym Murad III. It has been published in Cairo in 1285 and 1302 A. H.

Under the title *Geschichte der Firdaus der Chulifas Umar*, Otto von Hatten published (Berlin, 1837) an extract from the *Tarikh al-Khawarizmi* with a translation and a brief introduction in German, relating to the veneration of the second orthodox Caliph Umar b. al-Khattab.

In his *Lang. Arab. Grammatik*, (2nd ed., p. 43) Pelecanus gives a short extract relating to the Caliph Umar who had his son 'Abd al-Rahman whipped to death for having drunk wine in Egypt.

II. A minute description of the Ka'ba and the Holy Mosque, which survives in Ms. in Berlin N^o. 6069 and in the Khedival Library, ill. 116.

Biography: Haddad-Khalifa, ill. 177; P. Wittenfeld, *Die Geschichte der Propheten und ihre Werke* (Stuttgart, 1882), p. 520; Homboldt, *Reise in die Arabische Provinzen* (Berlin, 1902), i, 361; H. Hartz, *Arab. Literature* (London, 1903) p. 376.

(M. H. HARTZ.)

DIYAR MUDAR, the "dwelling of the tribe of Mudar" in al-Hauran = Mesopotamia, comprised the valley of the Euphrates from Samarra to 'Ana with al-Rakha as their capital, and the lands in the Bahh. See Le Strange, *The Lands of the Eastern Caliphate*, p. 96 et seq., 101-102. For further information see the article MEYAN.

DIYAR RAB'IA, the "dwelling of the Rab'ia" in Mesopotamia stretched along the Tigris from Tell Fafan to Tukri (capital al-Basra) and comprised the valleys of Khutir-Hamas-Ishdhar on the right, the lower course of the little Khutir, the upper and lower *Wadi* on the left side of the main river. See Le Strange, *The Lands of the Eastern Caliphate*, p. 27 et seq. For further particulars see the article *ANFA*.

DIZ (r. older form *dikh*, Avestan *dasu*), a fortress or citadel. Arab writers have handed down to us the name *Qahanda* "the old citadel" borne by the Sassanian fortresses inside the towns of Khuzistan and Misr al-Basra (Samarqand, Bagdad, Bahh, Misr, Nishapur, Hama etc.). — *Diz*, the governor of a fortress. Ahmad Wafiq Nishapur called himself *Diz* from a family of Bulgarian origin called *Diz*. (C. HARTZ.)

DIZFUL, the capital of Khuzistan, in 32° 25' N. lat. and 48° 35' E. long (Greenwich), on the bank of the Dizful-Rud or Abi Diz, which takes its name from it. This river which runs in the Murghab district flows into the *Wadi* a little below Band-i Kiz ("Asher's Bridge" see above, p. 488). According to Hensfeld, Dizful (650 feet above sea-level) is built on conglomerate cliffs 60 feet high, the outermost spur thrust by the mountains into the Sasanian plains; the ruins of Sura begin about 15 miles to the southwest. Dizful (Pers. *Dizful*) = "Castle Bridge" takes its name from a fortress which was erected to protect the long-arched bridge over the river there. The Arabs say this bridge was built by the Sassanian king Shapur II: it was often repaired, at least in its arches, in course of time; Mustawfi (740 = 1340) speaks of 43 arches, the Persian writer 'Ali of Vard (826 = 1425) of 28 large and 27 small, 55 in all; at the present day (according to Lottin) there are 23 arches, which have been so often renovated that they practically show quite modern brickwork; only the piers of the bridge are undoubtedly ancient and may actually date from Sassanian times. The town, which arose round the citadel at the bridge, is given various names by older Arab geographers: Kayt al-Khadi, Kanjarat al-Khadi = the Roman Bridge, Kanjarat al-Rud (= the River Bridge), Kanjarat al-Zah (Zah repeatedly means a river-name; Semitic root *zāh* "to flow"), also simply al-Kanjarat; the name Kanjarat Anshah (Anshah is the real ancient place-name) is also found; the Persian name Dizful is, as far as I am aware, first found in Vāqit.

from the *Journ. asiat.* 1902, p. 16 [76]: An. *Leopoldine d'Alphonse de Meudon* (Strassburg 1895), p. 17 et seq., with an explanation of the diagram in the *Almagest* of Ptolemy; *Almagest* (Oxford), *Traité de l'Almagest* (Paris 1895), p. 3 et seq. of the text. (R. CANA DE VAUX.)

AL-DJABBĀR, "the Great" was the name given by the Arab astronomers to the constellation of Orion, who was depicted in Greek mythology as a mighty hunter and giant. The older name of this constellation among the Arabs, before they became acquainted with Greek astronomy, was *al-Jabbār*, which originally may have been given only to the three bright stars in the girdle (from *jabbar* = kernel, nail, centre). The necessity of Arab astronomers also call the two brightest stars of Orion, *Al-nīl* and *Al-djabbār* = *Al-djabbār*, q. v., p. 789; and *Al-djabbār* = *Rigel*, q. v., although they call the whole constellation *al-Jabbār*.

DJABBUL, a town in Central Babylonia, on the east bank of the Tigris, a few hours' journey above Kūr al-'Amīn, and 5 parasangs (= c. 20 miles) southeast of Nūmāsiya (the modern Tell Ne'man). It is described as a flourishing place by the older Arab geographers; but, by Yāqūt's time (the beginning of the 12th or 13th century), it had considerably declined in course of time — we have no details of its decay — and fell utterly into ruins. This town must date from a very remote period; for the name of the Tāmūl, one of the most important Assyrian named tribes, frequently mentioned in the 12th century year R. 1, must have survived in Djabbul; they have left traces of their influence in modern topography in several other places. The ruins of Djabbul which were known by the name Djumbul, Djambul or Djambul as late as the first half of the 13th century according to the travellers Rich, Chesney and Jones, have now utterly disappeared owing to earthquakes. Up to the site where Chesney in 1835 had seen the ruins of a large town, no trace of them was to be seen in 1848 when Jones passed it; the Tigris had in the interval entirely engulfed the remains of the town.

(H. STRASSBURG.)

AL-DJABBUL, the ancient Gannatā, a place E. S. E. of Kufa, celebrated for its Mallāh or Sahkha watered by the Nahr al-Jabbul (see above, p. 806). The salt-mines there lent Djabbul a certain economic importance in the middle ages as they still do, to which it probably also owed its position as an administrative centre in the political division of the Mamlūk kingdom.

DJABIR an Arab Astronomer, a the Astronomer of the middle ages; he was often confused with the astronomer Geber, whose full name was Abu 'Abd Allah Jabir b. Hayyān al-Bīrūnī (see the next article). He belonged to the period in which he flourished cannot certainly be determined, but from the fact that he was personally acquainted with Maimonides (d. 1204), it may be concluded that he lived towards the middle of the 11th century. He wrote an astronomical work which still survives under two different titles; in the Oriental MS. it is called *Kitāb al-Hayyān* (the Book of Astronomy), in the Latin copy it is entitled *Libri de Astronomia* (translation of the *Almagest*). In it he sharply criticizes certain views held by Ptolemy; particularly rightly when he asserts that the inner planets, Mercury and Venus, have no visible parallaxes, although he himself gives the semi-parallax of about 3'. He also states that these planets are nearer to the sun than the sun. The book is otherwise noteworthy for preserving the astronomical part with a special chapter on trigonometry (cf. the article *cos*, 'LOWAYX', p. 123). In his astronomical trigonometry, he takes the "rule of the four magnitudes" as the foundation for the derivation of his formulas and gives for the first time the fifth main formula for the right angled triangle (see A = cos A sin B). In plane trigonometry he proceeds after the manner of Ptolemy, i.e. he solves his problems with the aid of the whole chord, the sine of the trigonometrical functions, sine and cosine. The work was translated into Latin by Gerhard of Cremona and this translation was published by Petrus Apianus in Nürnberg in 1534 under the title: *Gerardi filii Johannis Heptagonalis de astronomia libri 12, in gallica translatione, adiectis thesauris, emendatis etc.* — Whether a Hebrew work described by M. Steinschneider, *Seder ha-panim*, which treats of exact numbers is a translation of a work by Djabir b. Ahiab, is doubtful; besides the author is called Ibn Ahiab but Ahi Ahiab is not known.

DJABIR b. HAYYAN, whose full name was Abu 'Abd Allah Jabir b. Hayyān al-Bīrūnī, a famous Arab alchemist, known in the Christian middle ages as Geber, his name is sometimes given as Jābir and sometimes as Jābir. He is said to have been born in the 8th century, which is a doubtful question, to have early become a convert to Islam and to have shown great enthusiasm for this new religion: the name al-Bīrūnī dates from a later period.

His teachers were Khayyān b. Yazīd u. Mu'awiyā (d. 85 = 704), to which account he is also called

al-Umair the "Umayyad", and Dajfu al-Sakib [q.v.]. This is the story given by some authorities. It is really however he must have lived somewhat later than Khalid b. Yazid, so that he could probably flourished about 800 = 776. The *Ar-Risala* and *Udhihi Khata* connect him with the *Umayyads*. Of his life we really know nothing; according to the most reliable tradition he spent most of it in Kufa. A view, given in the *Fihrist* (p. 354 et seq.), that he never lived at all but is only a mythical personage, may be dismissed at once.

A large number of works have been attributed to Geber. Those that exist in Latin if we except the *Book of the Spheres* by Isidore do not correspond to the Arab works and in general they represent a more advanced stage of alchemical science. Our library contains 11 Arabic treatises bearing Uthayr's name, five of these have been published, viz. *The Book of the Knowledge of the Alchemist*, the *Secret Book of the Alchemist*, *The Book of the Alchemist*, the *Book of the Alchemist*, and the *Book of the Alchemist*. The *Book of the Alchemist* is a treatise, treated by a pupil, the *Book of the Alchemist* (K. al-Fihrist) and the *Book of Eastern Spheres* (K. al-Fihrist).

The doctrine contained in these works — and in the *Book of Spheres* especially, the authenticity of which is most certain, — is very anthropomorphic, as, if this term be preferred, very anthropomorphic. Matter is considered a living being; it develops in the body of the earth for a long period, thousands of years, passing from the state of an imperfect mortal to that of a perfect like gold. The aim of alchemy is to imitate this transformation. The laws of generation, marriage, impregnation and reproduction are applied to matter; as also are the ideas of life and death; rivers and earthly substances are "dead" in contrast to light and subtle substances which are called "living". Every material body has a soul and a body, a spiritual part and a material part. The work of the alchemist is to separate and refine the one from the other and then to give each body the spirit which suits it.

Western tradition has attributed important discoveries in chemistry to Geber, namely of sulphuric acid, nitric acid and nitrate of silver. But none of these discoveries is mentioned in the Arabic works which bear his name; they do not appear till the Latin works at the end of the 15th century. The estimation in which the Christian middle ages held Oriental alchemy is therefore not based on definite facts which we can check.

Bibliography: *Uthayr* at O. Houdon, *Uthayr* (1893); Paul Lacroix, *Science et lettres au moyen-âge* (Paris, 1877), p. 106 et seq.; Brockhaus, *Gr. d. arab. Litt.*, I 240 et seq.; Cava de Vava, *Uthayr*. In the *Encyclopaedia of Religion and Ethics* (Edinburgh, 1908). (U. Cava de Vava.)

Uthayr. The principal residence of the Uthayr Arabs of Chabab, hence called "Uthayr of the Kings", in Dywida, a day's journey S. E. of Damascus. It covered several small hills, whence perhaps is derived the poetical form *Uthayr* of the plural, with an allusion to the etymological meaning of "mountain", as a metaphor for the greatness. Cf. *Uthayr* and *Uthayr*, *Uthayr*, etc. (p. 72, 73). It was the perfect type of the ancient *Uthayr*, the *Uthayr* of the Bedouins, at the same time, a large camp, a collection of dwellings, half nomad and half sedentary, a com-

posed camp of tents and buildings, among the latter a Christian monastery. It had a plentiful water-supply and abundance of excellent pastures around it which are still called by the Bedouins of the Syrian desert. The gate to Uthayr, as leading towards it, was called *Gate of Uthayr*. It had three entrances, the present gate of Bab Sharq. About 1000 Uthayr is the one of the ancient names of Damascus.

The Arab conquest further increased its importance. A large camp was early established there, the principal of all Syria and for long the head-quarters of the *Umayyads*. As a military centre, being the Byzantine period it figured the Syrian metropolis. The name of Uthayr has been given to the battle of Yarmuk, there was a partial engagement with the Byzantines here and here also the spoils were collected after the battle. The capture of the Caliph Umar came here in the year 17 to settle the position of the new conquest, commanded by the principal *Sakib* of the Uthayr with the exception of Ali. It was a triumphal march, the first great demonstration of Arab imperialism. A parliament was held here, at which all the generals and principal officers of the Syrian troops were present. It has become celebrated as the "Day of Uthayr". The sermon delivered by Umar is likewise called *Uthayr* sermon. The Muslim generally refers to it as an important document. It was a claim to fame to have been present at it. The importance of this meeting was emphasized that which condition has given it its importance. It was on this occasion that the troops were organized on the system of regular divisions. From these divisions it was that proposed to include the Arab tribes, natives of Syria, who had assisted the invaders of the Uthayr, but their resistance caused this plan to fall through. As a result, the army was very healthy, Uthayr became the headquarters for the troops who were being demobilized. The plague of 'Amwas in Palestine north-west of Jordan, Damascus and the city of Uthayr on the west coast the *Umayyads* were distributed here; the place early had a general mosque and a number of palaces which got it on the same footing as the other and chief towns of the Uthayr. It is easy to understand then why all the *Umayyad* Caliphs after Mu'awiya visited Uthayr on returning from Damascus residence at Damascus. 'Ali al-Madik was the first to visit there before returning to Damascus was the Arab Uthayr.

When the Caliph was proclaimed Caliph and had moved the Uthayr from the Hijaz the Syrian contributed Uthayr to chosen settlement to Mu'awiya. The Uthayr was the first to arrive at the conference with his Kabbala, Uthayr the Kabbala (p. 72) had given to Uthayr, with the Kabbala, was an incentive. In addition to the young son of Yazid I, the other Uthayrs were there and all the Arab chieftains Syria. The Uthayr presided at the assembly and at Uthayr end of August 661. The various conditions were discussed. Yazid's children were ruled out of the question on account of their youth. Finally on the proposal of Kabbala the Uthayr, chief of the Uthayr, it was agreed to give the Caliphate to Marwan al-Hakam. Khalid b. Yazid I and next the Uthayr 'Am al-Ashabi were to succeed him. The army of the Uthayr party was thus once more established and Uthayr became the

castle of the Marwanid dynasty. Before marching against Dabab al-Kais the new Caliph unfolded the banner of the Marwanids, which was afterwards preserved by his successors. The victory of Banu Kalbi gave effectual sanction to the decisions come to at Hishiyah.

The recognition of the two eldest sons of the Caliph 'Ali al-Malik as heirs presumptive was the last great political event which had its scene at Hishiyah. The expedition against Constantinople began in the reign of Sulaiman caused the transportation of the great military camp of Hishiyah to Dabab, to the north of Aleppo. Hishiyah continued to be the chief town of a district dependent on Damascus. Its importance continued to diminish, particularly under the 'Abbasids, who hated everything associated with the Umayyads and in proportion as the Arabs became accustomed to living in towns its name continued to live in the Hishiyah. According to Ibn 'Abbas, the souls of believers are assembled at Hishiyah and those of the infidels at Hishiyah.

شاهي: شاهi

AL-DJABR wa al-MUGZALAH: was the name given in the older mathematical works of the Arabs to the theory or rather the method of solution of equations of the first and second degree; it may be best translated "Restoration and Comparison (or Equations)". Arabic writers themselves were not quite agreed on the meaning of these terms; but most of them agree with the following definition which is succinctly given by Bahr al-Lam al-Amili (d. c. 1377) in his *Kitab al-Hisab* (Basra, 1843, in Arabic and German by Nesselmann, Berlin 1843, p. 41-42 of the Arabic text and 45 of the translation): "The side which contains a negative term, is made perfect again and a quantity equal to that (term) added to the other side, (this is al-Djabr; the same or similar on both sides are taken away, this is al-Mugzalah". Example:

From $5x^2 - 6x + 2 = 4x^2 + 7$ by applying al-Djabr we get:
 $5x^2 + 2 = 4x^2 + 6x + 7$
 from this by applying al-Mugzalah:
 $x^2 = 6x + 5$

The second operation is as obvious as the first, to understand the first it must be remembered that the Arabs, unlike the Hindus, do not allow negative terms in an equation; the conception of the negative was still strange to the Arabs; therefore when an equation contained negative terms, it was not in order, it was imperfect, and had therefore first to be arranged, then restored (al-Djabr). But an equation with fractional coefficients (in the highest term) was also not in order, not properly arranged for solution, the fraction had therefore to be removed; the equation

$1x^2 + 3x = 9$
 had therefore to be multiplied by 3 so that the first term may be only 3 and it therefore becomes:
 $3x^2 + 9x = 27$

Al-Bahr al-Kashfi (c. 1300), rightly considered this operation also to be al-Djabr (cf. the *Kashf* or *al-Kashf* of Al-Bahr al-Kashfi, al-Husain al-Kashfi, trans. by A. Neuberger, Halle 1878, 1880, Part II, p. 43) In later works, e.g. the *Arithmetic* of Abu Zakariya al-Jazari (before 1000) (cf. Suter in *Bibl. Math.*, vol. 1 (31st Ser.), 1901, p. 40-41), and in those of Bahr al-Lam al-Amili (before 1400) and of Bahr al-Malik (d. 1400). In addition to the term al-Djabr, used in the above sense we also find al-Haff (reduction), in the sense that for example the equation
 $5x^2 + 3x = 5$

by application of al-Haff, i.e. by division by 5 becomes the equation

$x^2 + \frac{3}{5}x = 1$
 Carra de Vaux (*Bibl. Math.*, Vol. III (2nd Ser.) 1897, p. 1-2) is however wrong in thinking that al-Haff is an older name for the second operation and was in time replaced by al-Djabr; al-Haff has no connection with al-Djabr, but is a simple extension of the notion of al-Djabr, which is not at all necessary.

In course of time the second term *al-Mugzalah* gradually fell into disuse and, contrary to Nesselmann's view (*Algebra der Griechen*, Berlin, 1842, p. 45), this happened with the Arab mathematicians themselves: Abu Zakariya al-Jazari in his treatise on Arithmetic used only the word *al-Djabr* throughout. This name passed from the Arabs to the West: In Leonardo di Pisa's *Liber Abaci* (1202) we find the untransliterated word *algebra* or *algebra*, but immediately followed by the translation *restauration et opposition*. Cornet of Florence (15th century) is the first western writer to use *algebra* alone; al-Mughzala (c. 1500) found in the *Algebra* of Gosselin (1577). The former is also said to be the originator of the statement that *algebra* was derived from the name of the Arab scholar al-Bahr al-Kashfi (d. 1377), whether he meant the alchemist al-Bahr or the Spanish astronomer of the same name, cannot now be ascertained; Michael Stifel in his *Arithmetica Integra* also uses the expression *regula Gevi*.

But European scholars gave new names also to this science; in Italy arose the expressions, *arte magica*, *arte rei 77 terminum* (a translation of the words *77* (x) and *mai* (x²)) for which the corresponding Italian words *magister* and *arte* (for *regula*) still now afterwards came into use. The latter name also passed into German, in the 15th and 16th century Algebra was almost regularly known as *Recht der 77* or simply *die 77*. The oldest Arabic work on algebra, known to us, was composed by Muhammad b. Musa al-

Extractions in the time of the Caliph al-Ma'mun (ed. Rosen, Arabic and Engl. London 1831); as the terms *al-Jabbar* and *al-Jabbar* are not explained in them, it must be assumed that their meaning was already known and therefore that these ~~works~~ have been previous works on Algebra: whether the ~~works~~ were invented by Arab mathematicians, or ~~works~~ taken from Greek or Hindu works, has not yet been proved; in any case Diophantus uses both of these operations in solving an equation in his arithmetical work and describes them in a similar way but gives them no special names: but on the other hand this very impression that Diophantus had been translated into Arabic by the time of al-Ma'mun, his first translation is said in the Arab authorities to have been Khatib b. Ishaq (died c. 910).

Bibliography: On the Algebra of the Arabs in addition to the above-mentioned works the following may be consulted: *Extrait du Khatib, traité d'Algebre par Abou Israhil Mohammed b. Pontificia de' Nuovi Lincei*, T. 16, 1851, and Estratto, Rome 1851). — Cantor, *Vorlesungen über Geschichte d. Mathem.*, I (2. ed.), 1894, p. 676—768. [L. S. 1894.]

DJARRÄ'L, or Jharil, Gabriel, is the best known figure among the angels of Islam: he is one of the four archangels, one of angels favoured by an "hallowed name" (*muhammadiyyin*) God, and one of the divine messengers. His duty is to bear the orders of God to mortal prophets and to reveal his mysteries to them.

Gabriel plays an important part in the Koran. Muhammad applied the legend of this celestial messenger holding converse with the prophets to himself and believed that he had received his mission and the subject of his preaching from him. Gabriel's name only appears three times in the Koran; but in other and important passages, a celestial personage is designated by titles or epithets such as "the Spirit", "the Terrible" or even quite indirectly and the commentators unanimously recognise Gabriel in this personage. This identification is quite justified by a comparison of the different passages.

Let us begin with Sura II, 9. "Say: Who is as enemy to Gabriel? he is both revealed to thy heart, with God's permission, confirmation of what had been before and a guidance and glad tidings to believers". This verse explicitly states the part played by the archangel as revealer of the Koran; it belongs, it is true, to a late Sura; but it only reproduces another passage which is certainly early in which the inspiring angel is called "the Holy Spirit". (Sura 166): "Say, the Holy Spirit brought it down from thy Lord in truth to establish those that believe and for guidance and glad tidings to them". Wherever in one of the most ancient Suras, the same spirit is given the title of messenger, followed by a kind

of cosmology (Sura 166): "The Koran is the word of the noble Messenger, mighty, standing out with the Lord of the throne, obeyed and faithful".

It is possible that Muhammad did not at once give a name to the spirit with which he felt himself possessed, as the three passages, in which Gabriel's name appears, are late. In Sura xcvi, which in all probability is connected with the first revelation of the spirit and the sort of angel in which he received his mission, the angel is not designated by any name or title; the apostrophe, which is quite brief and perhaps mutilated, is impersonal; there it is said: "Preach, in the name of thy Lord who has created; ... preach, for thy Lord is most beneficent". According to tradition, this first revelation took place on Mount Hira near Mecca, whither Muhammad had retired, and the voice is said to have said: "O Muhammad, thou art the apostle of God, and I am Gabriel." But this may be only a false development, inspired by L. 16 of the Gospel of St. Luke, where the angel says to Zacharias: "I am Gabriel, that stand in the presence of God; and am sent to speak unto thee, and to show thee these glad tidings".

It appears that as a rule Muhammad heard the spirit but did not see him. Indeed there are verses in Sura LIII (1—18) written with great vigour and a deep feeling of solemnity from which it is clear that he only saw him on two occasions: "It is one Mighty power that has taught him; it is the Vigorous One; he hovered in the loftiest sphere, then he came down and remained suspended in the air. He was at a distance of two bows' length or nearer still; and he revealed to the servant of God, what he had to reveal to him ... he had already seen him in another vision ... the lote tree that marks the boundary ... the lote tree was all covered". The minuteness of the details leave no room to doubt the sincerity of the statement. Tradition adds that after this vision, Gabriel brought to the Prophet the name of al-Muhammad (q. v., p. 793).

Muhammad apparently knew Gabriel from the Gospel account of the Annunciation; but he could not have been directly acquainted with this source. It is probable that he heard it from the mouth of some philosopher or religious linguist, from some *harrif*, to whom it had already come in a mutilated version. In his opinion God sent his Spirit to Mary in the figure of a very beautiful man (Sura 93, 19); the spirit is not mentioned by name here; he told Mary that he had come to give her a son. In Sura LXXVI, 2, Muhammad recognizes that she retained her virginity and he asks God may "the breath of our spirit enter her". Tradition explains that Gabriel merely approached her and breathed upon her bosom; it was thus that she became pregnant.

The legend of the Archangel Gabriel is highly developed among the Muslims: this is seen without if one looks through works rich in legends, like the *Makharig al-Afshar* (*Adels der Mysterien*, transl. Carré de Vaux) or the first volume of Tabari's Persian *Chronicle* (transl. Zotenberg). There is scarcely a prophet to whom this celestial envoy has not brought help or revelations. Gabriel revealed Adam after the Fall and revealed to him twenty ~~years~~ years; he taught him the cultivation of wheat, the working of iron and the

letters of the alphabet; he took him to the river of Suez where he taught him the river of pilgrimage. It was Gabriel also who showed Noah how to build the Ark; he saved Abraham from the flames (cf. Gen. XXI, 19) and he had a good deal of further intercourse with this patriarch. He helped Moses to fight against the magicians of Egypt; at the Exodus he appeared on a horse with white feet to decide the Egyptians to enter the Red Sea which was to swallow them up. He appeared to Samuel, and to David to whom he taught the art of making coats-of-mail; he comforted this prophet and brought him braves with ten saddles which Solomon wanted. As in the Gospel, he came to Zacharias to announce the birth of St. John.

In the preparation of charms and talismans, Gabriel also plays an important part; his name frequently appears on the sides of magic squares, for example, along with those of the other Archangels, Michael, Anan'el and Izrail.

(B. CAZZA DE VALL.)

DJADA ('Amir), a South Arabian tribe. Their territory, *sensu* 'Amir land, also called Shafel, was to the west of the land of the Yafa (q. v.) and is for the most part mountainous. The soil is fertile in the north and produces dates with a little coffee and tobacco. The largest Wadi is the W. Nuta, into which flows the W. Jabab. Near the latter lies the Djebel Ar'ul Dharim, on which stand three ancient Himyarite castles. The chief town is *W. Hiyala* (also called *W. Shafel*) with about 1000 inhabitants (including about 100 Jews), a large market and many palaces. The Sultan of the 'Amir resides here and in war can rely upon an army of 3000 men. The little territory of Shafel is enclosed in the Djada territory but is politically independent.

The Djada are an ancient people. They are mentioned by Hamdani in his *Djatra*. He says of them that they speak bad Arabic; for example, they say *ya'nu wa-nawin* for *ya'nu al-nawin*. Of hills which belonged to them, he mentions: Hiyar and Ralufan; of castles: Shukra and al-'Uluin (?); of Wadis: amongst others: al-Jabab (which still exists), *Du'n* *wa* *Dama*, al-Hu'diya, al-Hazim, Khodir, Shafa (which still exists as a W. and as a village with about 100 inhabitants), 'Amir, Hawin, all of which ~~are~~ into the Adnan (Hijaz) (The Wadis given by Hamdani, *Amir and Shafel*, *Arabia*, p. 358-360, from a bad manuscript of Hamdani's *Djatra*, are mostly wrong and are to be corrected from Müller's edition, p. 89, .. 14).

The geographer al-Buhārī also mentions settlements of the Djada in the districts of Najdān. He mentions the hills *Lipi* and *Umin*, the villages of *Auk*, *Hunana*, al-Salbiān (?), *Najdā* (?) and the stream *Habhab*.

According to Hamdani the South Arabian Djada belong to a small tribe of 'Am al-Kahr, but as they are called Djada, try to claim kinship with the greater North Arabian tribe of Djada b. Ka'b, as it is usual amongst the smaller tribes in Arabia to take the name of a larger tribe and then to trace their descent from them. But it is really very probable (as Sprenger, *Die alte Geographie Arabiens*, p. 272, 284 f., also supposes) that in earlier times a portion of the Djada b. Ka'b migrated from Yemen to the westward to Yemen and there incorporated other South Arabian ele-

ments, so that the Djada in Yemen would really be descendants of the North Arabian tribe.

DJADA *wa* *Ka'b*, an Arabi tribe belonging to the Ma'adhi (Ma'adhi) group. Their genealogy is: *Djada* b. *Ka'b* b. *Kahla* b. 'Amir b. *Faris* b. *Ma'adhi* b. *Isa* b. *Ma'adhi*. The *Kahla* and *Isa* were closely related tribes. The poet *Nabigha* (al-Hu'di) traces his descent from the *Djada* b. *Ka'b*.

They inhabited the district of *Falaj* in the territory of *Yamama*. Of places, which belonged to them, there are mentioned, amongst others: *Ukm* (a large fortified town on the Wadi of the same name, with a much frequented market, many wells, houses and palaces and rich palmgroves), *Ghalghal*, *Malah*, al-Silāra and al-Judhān (?); of Wadis and watering places: *Ashab*, al-*Uhad* (a large Wadi a day's journey in length with the town of the same name), *Umin* (jointly with the *Kahla*) and the two streams al-*Ahla* and al-*Kuḥḥa*. Of castles there are mentioned: *Ma'adhi* and *Ka'b* 'Adl.

The Djada are said to have gone to the Prophet about a quarrel with the *Qasim* about the watering-place of al-*Ahla*, but he decided it in favour of the latter. In 126 (744), in alliance with the *Ka'b* b. *Kahla*, the *Uhad* and *Kahla*, they slew the prefect of al-Falaj, the *Ma'adhi* al-*Najdān* b. *Isa* (the so-called Day of al-Falaj), whereupon the *Kasbi*, 1000 strong, led by 'Abd Allah b. al-Na'man, undertook a campaign of revenge against them and they, after a defeat, a severe defeat upon them (the so-called second Day of al-Falaj). On other battles (*Faris* 'Adhān, F. *Kahla*, F. *Sharāh*), cf. A. al-*Agāthi*, *ib.* 134-137, 139, 140.

Sprenger, *Die alte Geographie Arabien* (Bern 1875), p. 233-235 (§ 363-365), 272 (§ 407). (J. SCHLEIER.)

DJADHIMA, al-*Adhima* or al-Wayḥay (i. e. the leper), a legendary Arab king, who founded an important kingdom in the lower Euphrates, including the towns of al-Hira, al-Ahisa etc., before the Lakhmid dynasty appeared in this territory. Tradition says as to his relationship to the other rulers, who are mentioned in the pre-Lakhmid period, though the North Arabian legends agree that he was an *Adhima*. Stories of him are very popular and various Arabic proverbs refer to him. So proud was he that he

would only have two sons or idols (*al-ḥarṭūṭānī*, or *al-ḥarṭūṭānī*, or *al-ḥarṭūṭānī*) as his companions; but his later conferred this honour on two more, Malik and 'Aḥḥ, who had fought and brought back his lost nephews. 'Amr b. 'Adī, his mother's son, his proclamation for the marriage of his ~~sons~~ with the Lakhmīd 'Adī could only be obtained after he had been intoxicated — a favourite motif, which has ~~been~~ found a place in the biography of Muhammad. He was ultimately enticed by the queen al-Zabīdī (Zenobia) to go to her and was slain by her.

It is, of course, impossible to add the historical basis from the realm of legend. At most the contemporaneity with Zenobia may be considered genuine tradition, particularly as it ~~agrees~~ with the fact that the inscription of al-Nuḥḥān given 328 A. D. as a certain date for Imru'at b. 'Amr, who, according to tradition, was a son of 'Amr b. 'Adī.

Jacob, *Attributions des Lakhmīd*, 105. (P. A. Wiet.)

DJADJIMA n. 'Adī was the son of 'Adī b. al-Du'ī = Dajān n. 'Adī-banāt n. Kinnān; but he is generally called Dajadīmā n. 'Adī n. 'Adī-banāt n. Kinnān. The small tribe named after him was settled at al-Sijrānāḥ not far from Mecca, and is chiefly famous for the treacherous attack made upon it by Khāḥḥ b. al-Walīd in the eighth year of the Hijra. Twenty years previously Khāḥḥ's uncle al-Fāḥī b. al-Mughīḥ had been robbed and killed by a party of Kinnān. The matter ~~had~~ been settled and in the interval Dajadīmā had professed Islam. Yet Khāḥḥ, being sent to them as a missionary, and with hostile intent, first induced them to lay down their arms and then proceeded to murder them in cold blood, in order to avenge the ~~murder~~ of his uncle. When Muhammad heard of it he professed to be greatly grieved, and paid compensation for the blood shed and for the property stolen.

Bibliography: Talbot, I. 209 et seq.; Ibn Khaldūn, p. 833 et seq.; Caussin de Perceval, *Revue*, III. 222 et seq. (P. A. Wiet.)

DJADID (properly "the new"), a malee, which was unknown to the Arabs and was first introduced by the Persians (whence the name) is said originally the form *fāḥḥūn* *fāḥḥūn* *fāḥḥūn* (twice), *Awsharīn* *Awsharīn* *Awsharīn* (twice), is also found.

Bibliography: Muhammad 'Alī, *Dictionary of Technical Terms* (ed. Springer etc.), I. 191. (A. SCHAEFER.)

DJADIS, one of the aboriginal tribes of Arabia: Tamm and Djadis were the two sons of Lakhmīd son of Shammī son of Nakh (*Nakh* = *Nakh*), but according to another account Djadis was the brother of Tammīd son of Lakhmīd son of Shammī, whilst Tamm was brother

of Amīdā and son of Lakhmīd son of Shammī (Ibn Khaldūn). Their country is said to have been invaded by the Lakhmīd Ibn al-Aḥḥ, and their extinction is ascribed to the Lakhmīd Ibn al-Aḥḥ. It is said to have risen against Tamm al-Aḥḥ (Ibn Khaldūn, who extenuated Djadis (*Kitāb al-Asnā*, p. 308 et seq.). Their both tribes were destroyed. Caussin de Perceval places their events about the year 250 A. D. (*Revue*, I. 100 et seq.). Two more were named in reference to this story — 'More been-destroyed than Tamm' and 'More been-destroyed than Tamm' — Zarkā, being a woman who warned Djadis that the enemy were approaching, and Lakhmīd being the Tammīd who invoked the aid of the Lakhmīd (Mullāḥ, *Arab. Press*, I. 192; n. 696). Djadīma al-Aḥḥ is said to have attacked Tamm and Lakhmīd before the expedition of Tammīd (see Caussin de Perceval, *Revue*, II. 24). Djadis seems to be referred to by Ptolemy under the name *Takurān* or *Takurān*, which would imply that they were still existent about the years 125-130 A. D. (*Geogr.* I. 29). Djadis, as the name of a sub-tribe of Lakhmīd is 'Adī, is an error for Lakhmīd or Lakhmīd (*Geogr.* I. 28 et seq.).

Bibliography: Talbot, I. 771 et seq.; Ibn Khaldūn, *Kitāb al-Asnā* (ed. Wiet), p. 14; Ptolemy, *Geogr.* I. 29 (ed. Wiet), p. 206; Caussin de Perceval, *Revue*, I. 28 et seq.

DJADWAL (Pl. *Qandāḥ*) means firstly "diamond", "intercourse"; it further means "table, plan" (in this meaning derived from *qandāḥ*). It thus becomes a special technical term in geometry, synonymous with *qandāḥ*; here it means quadrangular or polygonal, sometimes also circular figures, into which various and also *qandāḥ* *qandāḥ* *qandāḥ* *qandāḥ* powers are measured in the most varied fashion. There are usually certain systematic characters, Arabic letters and numerals, magic words, the names of God, the angels and demons, as well as of the planets, the days of the week, and the elements, and lastly pieces from the Koran, like the *Qandāḥ*, the *Shams* *Qandāḥ*, the so-called "intercourse" etc. The application of these figures is manifold; frequently the paper on which one has been drawn is burnt to smoke and used with its smoke; in the writing may be washed off in water and drunk; along with the *qandāḥ* (conjunction) and often also the *qandāḥ* (with) the *qandāḥ* forms the contents of a *qandāḥ* (magically). The very popular *qandāḥ* of *qandāḥ* is, for example, prepared as follows: it is quadrangular, is divided into 49 sections by six lines drawn lengthwise and six drawn across its breadth and contains: 1. The name *Qandāḥ*, i. e. Solomon's seal and other powerful figures. 2. The seven *qandāḥ* or *qandāḥ* which are not found in Surā 1-3. The names of God, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ* and *Qandāḥ*. 3. The names of the seven *qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ* and *Qandāḥ*. 4. The names of the seven kings of the *qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ* and *Qandāḥ*. 5. The names of the seven kings of the *qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ*, *Qandāḥ* and *Qandāḥ*. 6. The names of the days of the week. 7. Those of the planets. The underlying notion is that secret relationships exist between these various components and the *qandāḥ* is therefore made to obtain definite results from the correlations of the heterogeneous elements composing it. In this way new *qandāḥ* for particular purposes

come to be made; there are also made by using the above mentioned seven seals. The extremely complicated system of Arabic letters, which is based on the numerical values of Arabic letters, is very frequently used for the *djawal*. A special class is formed by the squares called *misb*, in the fields of which certain figures are so arranged that the addition of the horizontal and perpendicular lines, as well as that of the diagonals gives the same total (a p. 34 or 15). The quadrilateral containing the celebrated magic name *hastak* (q. v., p. 770) is derived from such an arrangement. For the other quantities of *djawal* the notes c. v. in Dory's *Supplément* and Rodmann's *Turkish and English Lexicon*.

Bibliography: By far the most important Arab authority is al-Hanafi, *Sigat al-Mu'arraf wa-Lawaf al-Mu'arraf*, while the best European work is E. Douté, *Magis et religion Juv. l'Africain du Nord* (particularly p. 150 v. 179), where a further note is given. There is also some information in Lane, *An Account of the Manners and Customs of the Modern Egyptians*; also Markham, *Quantum-Religion*, particularly p. 133 v. 179, and Sellmann, *Der Arab. Myth.*, p. 163 v. 179. (K. GRASSER.)

DJADY, the bu-goat, more particularly a hog-goat one year old. Kaewul gives only a few notes under the Arabic *mu's* (goat) on its natural history. Goats have thick skin and thin hair unlike sheep which have thin skin and are protected from cold by a thick covering of wool. When the hog-goat sees a young lion, he approaches it slowly, but when he smells it, he falls into a stupor and lies on its head till the lion departs. It eats locusts without harm and becomes fat on them. Its uses in medicine are numerous; Kaewul gives the *Atal al-Mu'arraf* of Balling as his authority for them.

In Astronomy, *al-Djady* is 2, the name of the Pole Star (= Ursa Minor) "by which the Kibla is located"; 3, the name of Capricorn, the tenth constellation in the signs of the Zodiac, which is composed of 28 Stars.

(J. KUNZ.)

DJA'FAR s. Abu TALIB, whose epithet was al-Tayyib ("he who flows into Paradise"), a cousin of Muhammad. *Dja'far* was one of the first converts of the Prophet and took part in the second migration of believers to Abyssinia. According to the usual story he was actually the leader of the emigrants and spokesman at the audience with the Negus. Some say he also took part in the battle of Badr; but he was still in Abyssinia at this time. He did not return to Arabia till 7 (628), immediately after the battle of Khaybar, and he as well as his followers received from the Prophet a share of the spoil taken there. When in the following year Muhammad sent an army of 3000 men under Zaid b. Haritha against the Byzantines, he appointed *Dja'far* to be deputy in case Zaid should fall and 'Abd Allah b. Rawhah to succeed *Dja'far* if he also should perish in the battle. They came upon the enemy at Mu'ta not far from the Dead Sea. Zaid, *Dja'far* and Ibn Rawhah fell in succession, and it was only with difficulty that Khalid b. al-Walid was able to check the flying Muslims and

lead them back to Medina. This happened in the year 8 = 629. The tomb of *Dja'far al-Tayyib* is still shown at Mu'ta and is said to be venerated not only by Muslims but by Christians also. The mosque there was built by the Ayyubid al-Malik al-Mu'azzam Ibn.

Bibliography: Ibn Sa'd, vol. IV, part I, p. 22 v. 179; Tabari (ed. de Goeje), passing Ibn al-Akthar, *Chronicon* (ed. Tornberg), II. 42, 59 v. 214, 163, 178 v. 217; de, *Ust al-Ust*, I. 280 v. 217; Ibn Hisham, *Ust*, I. 483 v. 217; Müller, *Der Islam im Morgen- und Abendland*, I. 1304; Coqut, *Annuaire de l'Islam*, see Index; Ibn Khayy, *Ust* v. 1304; Ibn Khayy, *Ust*, I. 105; Muall, *Arabia Petraea*, I. 62, 152; II. 287, 330; Caillat, *Universitäts-Bibliothek*, p. 204 v. 217; Journ. As., 9th Ser., IV, 280. (K. V. ZETTERSTEN.)

DJA'FAR s. al-FAR. (See Ibn al-FAR.)
DJA'FAR s. MUHAMMAD, also called al-Sayyid ("the Trustworthy"), the sixth of the twelve Imams. *Dja'far* was born in 80 (697-700) or 83 (702-703) and succeeded his father Muhammad al-Baqir as Imam. He played no part in politics. On the other hand he was celebrated for his thorough knowledge of Muhammadan Tradition and is said also to have occupied himself with astrology, alchemy, and other secret sciences, but the works which bear his name are later forgeries. He died in Medina in 148 (765). The members of the Imamiya sect are agreed upon the succession to the Imamate down to him; but they do not agree as to his rightful successor, for he had several sons and no fewer than four of them, Muhammad, 'Abd Allah, Musa and Isma'il, claimed the Imamate. His son Musa al-Kadim is however recognized by them as the seventh Imam.

(K. V. ZETTERSTEN.)

DJA'FAR s. MUHAMMAD. (See Abu TALIB, p. 94.)

DJA'FAR s. YAHYA the Barmaqid. The position of *Dja'far*'s family placed him at once in intimate connection with the ruling dynasty, for his father Yahya b. Khalid b. Barmaq, as vizier and secretary of state, had long been a chief ruler of the great empire. His brother al-Fadl b. Yahya was held in great honour by the Caliph Harun whose sister-brother he was and by his own personal qualities he succeeded in becoming the recognized favourite of the great 'Abbasid Caliph and reaching the highest summit of power. In 176 (792-793) he was appointed Governor of Egypt but in the following year the Caliph relieved him from the post. When troubles broke out in Syria, he was sent there in 180 = 796-797 and restored peace. In the same year he was appointed Governor of Khurasan and Sijistan, but replaced twenty days later by 'Isa b. *Dja'far*. He was also vizier for a period. Nevertheless he did not play any considerable part in public life; his importance lay mainly in his great personal influence on Harun, who could not live without the company of his witty and cultured friend; he even entrusted him with the education of his eldest son Ma'mun. His striking attachment to the young Barmaqid, which he probably to be

traced to a vice not uncommon in the East, even went so far that he married him to his favourite sister 'Alibda. As he wished to have them both beside him and 'Alibda could not well believe the young Djafar, they had to marry; but lest the Barmakids by this alliance might become a menace to the dynasty, the marriage was to be only a nominal one. Nevertheless 'Alibda bore a son — according to another story, twins — whom she had brought up in Mecca. The truth could not be concealed from the Caliph for ever. 'Alibda was betrayed by a slave-girl and after Hasan had convinced himself of the truth of her story, while on a pilgrimage to Mecca, he resolved to be avenged. On the second last day of Muharram 187 = 27th January 803, Djafar was suddenly beheaded by the Caliph's orders without further investigation. The other Barmakids were thrown into prison and their property confiscated. Whether Djafar's connection with 'Alibda was really the cause of the Caliph's sudden outburst of hatred against his favourite, must remain uncertain however. But his dependence on the family of ministers must in the long run have become unbearable to Harun and with the inherent of power of the Barmakids only two things were possible, complete subservience on the Caliph's part or the utter destruction of the Barmakids. Other explanations are also given. For example, it is said that Hasan had set free the rebel Yahya b. 'Abd Allah without permission and thus crossed the Caliph's wrath. In any case the latter must have been embittered against Hasan personally for some reason; otherwise his wrath would have been mainly directed against his father, the head of the family. The intrigues of Faql al-'Itah' also were certainly not without influence.

Probably several circumstances contributed to Harun's decision to overthrow the Barmakids. Cf. the article *BARMAKIDS* (p. 663).

DJA'FAR CELEBI, an Ottoman poet, whose father Tadjibey was attached to the personal service of Sultan Bayazid II, while the latter was governor of Amasia in the lifetime of his father Muhammad II, displayed precocious talent and was therefore appointed Mudarris in Mahmud Pasha's school in Constantinople; from this post he was called to fill the office of *Nizâmî* (secretary to the Divan) and Bayazid appointed him supervisor of the *Dolâkçılar*, at the same time giving him the rank of Pasha, whence the name Nizâmî Pasha by which he was popularly known. After the death of the Janissaries in favour of Selim, (917 = 1511) he was dismissed, but when the latter succeeded his father in the following year, he again appointed Djafar Nizâmî; a little later he made him *Kâtip* of Anadolu and took him with him on his Persian campaign. Deposed by the Janissaries as one of the investigators of their refusal to march beyond Tabriz, he was condemned to death and executed on the 8th Raddab 920 = 29th August 1514. He was buried in the mosque which he had built in the

Bahçe quarter (the Nizâmî Mescidi). He left a *Diwan*, which is not yet published, and a poetical work entitled, *Nezâid*: "Book of Wishes." The lyrical style of his *Diwan* is elegant, and shows the author's profound erudition but the artificial character of his poetry is too marked.

(C. L. HUART.)

DJA'FAR, or *Abu Qasim*, called ZATALI, of Delhi, a notable author of humorous poetical and prose compositions, some in Persian, others in mixed Persian and Urdu, including *Fihrist*, or *Index* on fortune-telling. His ancestors came to India in the time of the emperor Humayun, and were given a tract of land rent-free, as a reward for loyal military service. At the commencement of the reign of Shah-Jahan they were dispossessed of these lands, and Sayid 'Abbas, the father of Abu Djafar, became dependent for a time on the earnings of his wife as a seamstress. After a while he opened a small shop, and, on receiving temporary assistance from a rich relative in the Dekkan, he was enabled to extend his business, and became a prosperous merchant. Abu Djafar was born shortly after the accession of Aurangzeb (A. D. 1658). He lost his father at an early age, and was brought up by his mother. Abu Qasim (the trading school) he obtained service under Adam Hakikah, the youngest son of the emperor 'Alauddin, and he said to have obtained the sobriquet of Zatali "The Jester" from the Hegazi Zali al-Nisbi, daughter of the emperor. The date of his death is uncertain, but he is said to have lived to an age of over 80 years. His *Index* has been written by Muhammad Asad, under the name of "Hindostani Speculation" in a work entitled *Abu Djafar* (Lahore, 1892). His *Kulliyat*, or complete works, have been frequently published.

(J. P. BERNHART.)

DJAFR. There developed very early in Shiite Islam a belief that the descendants of 'Ali were in possession of a *Wahid* tradition, a body of religious and political esoteric knowledge covering all things to the end of the world. The general Muslim reverence for the family of the Prophet had grown in the Shi'a to a belief that the Imams could err; they did not err. Thus, a book was written in 'Ali giving the inner meaning of the Qur'an (Ibn Sa'd, ii, p. 201, l. 19). In intelligible enough opposition to the Sunni exegesis of the 'Alids. Even the Kharijites make a just use of the secret knowledge professed by the 'Alids (*Agad*, xx, p. 107, ll. 16 ff. 19), and in the third century of the Hijra, Bishr b. al-Mu'tazz, the Mutawila, wrote a book by which they are deceived. The *Wahid* *Al-Bihar* (*Exposition*, v, p. 94, l. 1) the *Wahid* (d. 270 A. H.) also refers to this book. In a quotation by Hamid in his *Al-Bihar* (*Exposition* and *Wahid*, vol. i, p. 171, ed. of 1315) from the *Wahid* *Al-Bihar*, the *Wahid* is said to be a book by Djafar b. Muhammad al-Sadi (the sixth Imam, d. 168), written on the skin of a *Djafir*, a just woman old or lamb, for the information of the House of the Prophet, containing all that they needed to know and all that was to happen until the Last Day. This passage does not seem to be in Gruner's text, and Hamid may have

mistaken his book. For Ibn Kuthayb, according to Ibn Khallikān, has a passage to the same effect in his *Maḥallat al-faḥḥ* and adds there some lines by Ḥarūn b. Raḥ (or Sa'īd) al-Bḥrī, head of the Zaidites, ridiculing this pretension (Ibn Khallikān, de Sane's text, p. 432; de Sane's transl. in p. 184; Wartenfeld's text, No. 419; Goldziher in *Zeitschr. f. d. Islam. Wiss.*, xli, p. 123; Friedländer in *Journ. As. Or. Ser.*, xlii, p. 106). Ibn Kuthayb's etymology is more than dubious; there seems no trace of *Diyafr* being used in the sense "vellum" or "parchment". Van Vloten (*Chrestom.*, p. 56, note 6) suggested a connection with *ḡaḡa* and Goldziher (*Zeitschr. f. d. Islam. Wiss.*, p. 30, note 5) with *ḡaḡa*. But more singular still is the fact that while the *Diyafr* has many references to *ḡaḡa* al-Sāḥib (p. 178, l. 13; p. 195, l. 7; p. 224, ll. 30 et seq.), p. 317, l. 26; p. 355, ll. 1 et seq.) and does not hesitate to bring him into connection with *ḡaḡa* b. Ḥayyān the astronomer (p. 355) and questions, though to reject, his asserted authorship of a cardinal book on mythology (p. 317, l. 26). It has no scrap of mention of this *Diyafr*. A *ḡaḡa* al-maḥallat by 'Alī b. Yūḡayyū is referred back to his authority (p. 224, l. 25) and it is plain that such books were current in his environment. See another *ḡaḡa* al-maḥallat (p. 223, l. 20) and a *ḡaḡa* al-Raḥīf (p. 223, l. 17). Yet the *Diyafr* would certainly fall within the class of *Maḥallat* books. The catalogue, however, of this ancient, infallible book was universally assumed by Shī'ites. When a Shī'ite author tells how Ḥaḡmān appointed *ḡaḡa* al-maḥallat, 'Alī b. Muḡa al-Bḥrī (eighth Imam of the Twelvers, d. 202) as his successor, he always adds that 'Alī b. Ḥaḡmān wrote to Ḥaḡmān "through the *Diyafr* and the *ḡaḡa*" to indicate the opposite of this" (i.e. p. 204, l. 19 of ed. of *ḡaḡa*, 1317). The *Diyafr* is another similar book often mentioned in this connection. For it see Goldziher, *Revue de l'islam*, p. 35 and note, and for an interesting hypothesis of its origin, bringing it together with the *ḡaḡa* of the Ikhwān al-Salā, Casanova, in *Journ. As.*, 9th sér., vol. 21, pp. 151 et seq. Yet another such book is the *Maḥallat* *ḡaḡa* (Goldziher, l.c.). Another historical occasion with which it is always connected is the appearance to the Maghrib of Ibn Tūmar. It was the *Maḥallat* tradition that their Maḥallat had been a favorite pupil of al-ḡaḡaḥ, the custodian at the time of the *Diyafr*. That al-ḡaḡaḥ had learned from the *Diyafr* the high destiny of Ibn Tūmar, and that at his death the book had passed into the custody of Ibn Tūmar (see my *Life of al-ḡaḡaḥ* in *Journ. As. Or. Ser.*, vol. 22, p. 113, and especially *ḡaḡa* pp. 116 et seq.; and the poemigraph *ḡaḡa* al-maḥallat, p. 1 et seq. of Bombay 1314). Was the opinion of the upper and more sceptical public may be gathered from al-Bḥrī and Ibn Khallikān. Al-Bḥrī (l. 440) speaks *Chrestom.*, transl. Sachau pp. 70, 182) with the greatest reverence of al-Sāḥib, but has no patience with the decisions as to endorse falsely ascribed to him. He does not mention the *Diyafr*. Ibn Khallikān treats the *Diyafr* in connection with the book of *Maḥallat* (Quatremère's text, ll. pp. 184, 195. Dillé's ed. of 1278, pp. 162, 164; de Sane's transl. ll. pp. 216, 226). He declares that the House of Muḡammad had, like all the world, the knowledge of prophecy. Such a book, therefore, might have been produced by *ḡaḡa* al-Sāḥib, but he finds no

proof of such connection. The fragments in currency may, he thinks, connect with a book called *ḡaḡa* which Ḥarūn b. Raḥ al-Bḥrī possessed and which he said had come to him from *ḡaḡa* al-Sāḥib. But of this descent there was no proof. (But see above as to this Ḥarūn). There was (note also, and Ibn Khallikān, of another book called *ḡaḡa*. It was by Yaḡqūb b. Ishāq al-Bḥrī, astronomer to Ḥarūn al-Raḡhīd; it treated astrologically of the fate of the Muslim empire and was based on astronomical conjunctions. But it had been completely lost. So far, the connection of the *Diyafr* has been with prophetic traditions and astrological calculations (see de Goeje's *Memoire sur les Coraniques*, pp. 115 et seq.). But in time there arose a belief that in its terminology were cabalistically expressed in separate letters, and 'Alī al-*Diyafr* came to be known as 'Alī al-*ḡaḡa*, the method of prediction by assigning (by *ḡaḡa*) numerical values to letters (Ibn Khallikān, ll. pp. 603 et seq.). To this science (*ḡaḡa*) Ibn Khallikān devotes a section (Quatremère, ll. pp. 137 et seq.; de Sane, ll. pp. 158 et seq.; Dillé, pp. 245 et seq.); but makes no connection with *Diyafr* or the *Diyafr*. In his exposition *ḡaḡa* reads like a reduction ad absurdum of numerology, and certainly, the ideas that letters in *ḡaḡa* represent real things, more fitted with a recognition that Arabic is sacred in itself as the vehicle of the Muslim message, seems to have led to this transition (*Dict. of Ism. Sci.*, l. pp. 202 et seq.; also on pp. 127—131, sub *ḡaḡa*, on *Diyafr* as 'Alī al-*ḡaḡa*). This has come to be the ruling association with the word *Diyafr*. For further details, references and instances of existing traditions and fragments bearing this name, see Brockelmann, l. 24, l. 11; p. 220 note 3; 446 (Ibn 'Arabī, No. 77, 78; *ḡaḡa*, p. 404 (No. 5, 6); Murādī, *Sill al-Durur*, l. p. 5) (a translation into Turkish of *Diyafr* al-*ḡaḡa*) still recently preserved in the library of the Sultan at Constantinople; Abūwālī in *Basmal* (l. p. 354 et seq. *Nieuw in Suppl. to the 'Alī al-ḡaḡa* MSS in *Isis*, Mar. No. 825. For use in popular literature, see *ḡaḡa* al-*ḡaḡa*, Burton's *Arabian Nights*, Library ed., vol. xii, pp. 114 et seq.; the book is in the library of Ḥarūn al-Raḡhīd and is contained by him.

ḡaḡa al-*ḡaḡa*; Goldziher, *Fortsetzung*, pp. 224 et seq., 263 et seq. (important); E. Doust, *ḡaḡa* et Religion, pp. 177 et seq. (on 'Alī al-*ḡaḡa*); Rahmān, *Monuments musulmans*, l. pp. 346 et seq., 370 et seq.

(Dr. H. MAURINARD.)

DJAGHUB. a *Zawiya* of the Senḡal in the Oasis of Fareligha on the frontier between Tripolitania and Egypt, fifteen days' journey S.E. of Benghazi and two S.W. of the Oasis of Siwa; lat. 29° 47' N., long. 24° 20' E. (Greenw.). This place was uninhabited when ḡaḡa al-Sāḥib, founder of the *Zawiya* order, settled there on his return from Mecca and Cairo in 1855. He built a *Zawiya* on a rocky spur commanding the oasis, dug a spring out of the rocks and planted gardens and a palm-grove. He died and was buried there in 1859; beside him lies one of his sons ḡaḡa al-Muḡammad ḡaḡa, (d. 27th Ramadan 1333 = 12th March 1896). The *Zawiya* seems to have developed rather slowly at first. In 1894 it only contained a few students and some slaves but it soon afterwards began to expand rapidly. In 1898, according to Dreyer,

it contained 750 *muḥ* and 2000 slaves. Besides the religious buildings, there were workshops of all kinds and an arsenal. Under Sheikh Sidi Muḥammad al-Makhlūf, son and successor of the founder, the Zāwiya became the headquarters of the propaganda, and from it missionaries spread Islam and Sufi doctrines throughout Central Africa, particularly towards Wadai. In 1890 the Sheikh removed from Djaghber to Bilal al-Dīf in the oasis of Kafir, to be nearer Wadai and at the same time to remove his disciples from the reach of European influence. Djaghber has nevertheless remained the most important Zāwiya of the South. It is a place of pilgrimage and a centre of learning, attended by 3-400 students, with a library of about 8000 volumes as we know from Shaikh al-Makhlūf.

Douvriat, *La Confrérie musulmane de Sidi al-Sayyid* ... in *L'Année 1700 de l'Égypte* (1885) 7. 2. in the *Bulletin de la Soc. de Géog. de Paris*, 1884; al-Husaynī (Le Cheik al-Makhlūf ben al-Manzūq), *Voyage en Pays de Nubie*, trad. par V. Serret et L. Lantier (Paris 1905; 2nd ed. Paris 1912). (C. V. V.)

AL-DJAGHMINI (or **CAJAGMINI**), **MUHAMMAD B. QASB**, an Arab astronomer of some importance born in Djaghmin, a district in Ghazir, his date is not quite certain but it is very probable that he died in 745 (1341-1345) (*cf.* my note on this point in the *Revue de l'Égypte*, *Mémoires*, *Géographie*, III, 339). We possess the following works from his pen: 1. *al-Makhlūf k' l'Alfīya* (Commentary of al-Bīrūnī), a work which was very popular and has often been translated, e.g. by Kāfī al-Dīn, al-Djurdhān, etc. 2. German translation of this work by Rodolf was published in the *Revue de l'Égypte*, *Mémoires*, *Géographie*, *Vol. 23* et seq. Numerous manuscripts still exist, in Berlin, Götting, Leiden, Paris, Oxford, etc. 3. *Kitāb al-Makhlūf wa al-Falākh* ("The Strong and Weak Influence of the Stars"), a copy of which still exists in Paris. 4. *Ḥadīth al-Minor Canon*, a medical work, extracted from the *Ḥadīth al-Minor Canon*, which still exists in Munich, Götting, etc.

Bibliography: Rühl, *Des Tripoli*, *Vol. 135*; Rodolmann, *Gesch. d. Arab. Literatur*, I, 473; Nallino, *al-Falākh*, *Opus astronomica*, various passages in the index of this work; Suter, in *Abhandl. v. Gesch. d. mathem. Wissenschaften*, 1884, *Vol. 177*. (H. V. V.)

DJĀGIR (f.), literally = "he who takes a place", is used in India, in the same sense as the Arabic *ḥiḍ*, for a piece of ground which is granted to any one either for his lifetime or in perpetuity as a grant, as a reward or service. The holder of such a grant is called *ḥiḍdar*. (*cf.* H. H. Wilson, *Glossary*, s.v.; Beider's *7-words* (London, 1847), p. 213, 224.)

DJAHĀNĀRA BĒGAM was commonly known as the Bēgam Shāh, and is also sometimes called Padshāh Bēgam. She was the eldest surviving child of Shāh Jahān, and was born in March 1614, probably at Agra. Her mother was the Arghandān Bānū, or Mumtāz Mahal or Mumtāz al-Zamān the daughter of Asaf Khān (No. II.) and niece of Nur Jahān, for whom the Taj Mahal was built. Djahānāra was never married, and was distinguished for her beauty and accomplishments, and her affection for her father and

for her brother and spiritual guide, Shah Jahan. Both Shāh and Mumtāz have a good deal of apocryphal gossip about her, and though Mumtāz acquits her of one horrible charge, he does both her and her father injustice when he says that Shāh charges her with having poisoned her nephew. She may have had her faults and her enforced apocryphal was not conducive to morality, but she was most generous and charitable, and was a devoted daughter to her father when he was old and infirm, so that Mr. Keene aptly calls her the Moghul Cinderella. She was very religious, and wrote an account of one of her favourite saints, *Mawlā al-Dīn* (light of Ignorance) (*Alif*, *Vol. 1*, p. 11, *Alif*, *Vol. 1*, p. 11, 1357) in March 1644 (she had a narrow escape from burning). They were celebrating her birthday (according to the civil and not the lunar calendar) at Agra, and she was returning to her chamber after saying good-night to her father, when her dress of black muslin caught fire from a naked light. She was severely burnt on the chest and arms, and her two handmaids, who tried to save her were also burnt. Indeed it appears that two or more of them died of their injuries. The chief mosque of Agra was built by her, or in her honour, and probably as a memorial of her recovery, in 1644-1648. She also built her tomb outside Delhi in the precincts of the tomb of Nizam al-Dīn Awliya, a famous saint of the Sufi order. It bears a touching inscription composed by herself. The original text of it is given in Sayyid Ahmad's *Asar al-Sanadid*, (p. 39 of Lucknow edition of 1895) and there is a translation of it by Eastwick and Keene (*see* the latter's *Handbook of Delhi*, Calcutta, 1882, p. 37). She died in Delhi on 6 September 1637. There is a good account of her in Keene's edition of *India's Oriental Disasters and Tragedies*, and there are references to her in the *Farḥastama* and in *Asar al-Sanadid*. (H. V. V.)

DJAHĀNDĀR SHĀH, **MUHAMMAD B. ALI** AL-**SHĀH**, the thirteenth emperor of Delhi of the house of Tughlq, eldest son of Shāh 'Alauddīn Shāh, was born in May, 1307. Before his accession he was governor of the province of Multan, and on his father's death in Lahore, in 1322, was raised to the throne by Shāh 'Alauddīn Shāh, who was instrumental in overthrowing his three brothers, 'Alauddīn Shāh, 'Alauddīn Shāh, and 'Alauddīn Shāh. Jahāndār was violent, foolish, and pusillanimous, and centralized all classes of his subjects by his open and shameless profligacy and his subservience to his mothers, Lal Kunwar, a Hindu dancing-girl. He had not been seated on the throne a year when Farīdshāh, the eldest surviving son of his brother, 'Alauddīn Shāh, succeeded in attaching to him the two Saljuq brothers of Balkh, 'Alauddīn Shāh, governor of Balkh, and 'Alauddīn Shāh, governor of Balkh. Farīdshāh and the Saljuqs marched from Pajmā towards Agra, joining to Shāh 'Alauddīn Shāh an army of 80,000 horse from Delhi to Agra. At Samragh near Agra the armies met; and during a fiercely contested battle Jahāndār's army and his son 'Alauddīn Shāh, leaving Shāh 'Alauddīn Shāh opposed to the rebels. Shāh 'Alauddīn Shāh, unable to discover the fugitives, was forced to retire, and

Ferozshāhyar advanced on Delhi. On Feb. 12, 1723, Dījahāndār Shāh was strangled by the orders of his successor, Ferozshāhyar.

Bibliography: *Siyar al-Mulūk* (Hakim, etc.). (T. W. Haig.)

DIJAHĀNDĀR, eldest son of the Emperor Akbar. He was born at Faizpur Sikri on 31 August 1569. His mother was a Rajput, the daughter of Rājā Bihārī Māi Kachhāwā, who afterwards was styled Mirzam al-Zamān, "The Mary of the Age". His father gave Dījahāngī the name of Sultan Salīm, though he generally called him Shāhghī Bāhā, in allusion to the belief that he was born in answer to the prayers of the dervish Salīm Chishtī, and in his cell. When Dījahāngī succeeded his throne on 23 October 1603 he took the title of Nur al-Dīn Dījahāngī Badshāh. After death he was styled Dījahānī Shāhān "the whose shade is in Paradise". He reigned for 22 years and died on 23 October 1627 shortly after leaving Faizpur on his way from Kashmir to Lahore. He is buried at Shikharā near Lahore, on the right bank of the Ravi, and close by is the tomb of his wife Nur Dījahān.

Dījahāngī was not without abilities, and he had a genuine love for nature and was a lover of justice but he was a drunkard and an opium-eater, and his reign is not marked by any feat of arms or of virtue, except perhaps his committing a steady stream from Agra to Lahore. In the 17th year of his reign, 1623, Kandahar was lost to the Persians. While in prison, he caused the murder of his father's mother, Asha 'U-Faq, and indulged so much in debauchery that Akbar wished to pay him over and to make his son Nuruz his heir. Dījahāngī also rebelled against his father, and probably it was this and cowardice rather than ill-affection which prevented him from executing his designs. He was a worse man than his contemporary James I of England, and had a worse training, but there were curious coincidences between the two men. Both loved learning and hunting, both were weak of mind and under the power of paroxysms, both had a certain amount of tenderness and good nature, and both substituted against tobacco. As Macaulay has shown that James resembled the Emperor's father, it follows that Dījahāngī had something in common with the latter. It was perhaps a pity that Akbar did not allow his son to marry Nur Dījahān in his youth. She would probably have had a good influence over him. He did marry her after becoming king, but he did so as he had to act somewhat after the fashion of King David with Uriah, and to procure the death of her husband. Dījahāngī had no children by Nur Dījahān, but she was almost an elderly woman when she married him. She had a daughter by her first husband and married it her son-in-law — Shāhryār the youngest son of Dījahāngī — and her quarrel with Shāh Dījahān, had disastrous consequences for India. They are eloquently described in the *Muzhar al-A'war* I, p. 133, in the notice of her father Qilyāsh Beg. One of the most remarkable events of Dījahāngī's reign was his capture and practical dethronement by Shāhshāh Khān in 1606. Eventually Nur Dījahān released him. Dījahāngī has five sons and two daughters. The eldest, Sultan Khurram, rebelled against him in the beginning of his reign, but was defeated and captured and died in the Akbari after a long imprisonment. Sultan Farwā was an able prince,

but had his father's vice of drunkenness, and died before him. Sultan Khurram afterwards Shāh Dījahān, rebelled but eventually submitted. He succeeded his father. Sultan Dījahāngī who was born at the time of the accession and who was called Sultan Tughl (the Throne-Sultan), seems to have been an idiot from birth. Shāh Dījahāngī was worthless, and was nicknamed "Good for Nothing". He attempted to become king on his father's death and was executed.

Dījahāngī wrote his own Memoirs. They are styled *Fawa'id-i-Jihāngīrī*, and are interesting and valuable. The first volume has been translated, and published by the Roy As Soc. London, 1902. There is another version of the *Fawa'id* but it is more or less spurious. A translation by Major Price was published in 1899 by the R. A. S. The Persian text of the *Fawa'id* was published by Sayyid Ahmad of Aligarh at Qashghar in 1863, and again at Aligarh in 1864. It contains a good many errors. Much of the Memoirs is translated in the 6th volume of Elliot's *History of India*. Sir Thomas Roe's *Journal*, and the book by the chaplain the Rev. Edward Terry contain interesting notices of Dījahāngī. There is also a Persian life of his reign by his secretary Mahmūd Khān which was published in the *Bibl. Ind.* in 1865. (H. BERNIERI.)

DIJAHĀN-SHĀH, MUGHAL AL-DIN, the third ruler of the Kara-Kyrgyz dynasty, was the son of Kara-Yasul; after unsuccessfully fighting on the side of his brother Iskandar against Shah-Rukh, the son and successor of Timur (1370-1405), he submitted to him in 1388 (1334-1335), and was granted the governorship of Adharbadjan on Iskandar's flight (1393-1433-1436). After the departure of the Timurids he was attacked by his brother but he fled to him in the fortress of Adharbadjan, in which he had taken refuge; Iskandar was murdered by his own son Kubak. Dījahān-Shāh became undisputed lord of this province and an such marched against Georgia. On the death of Shāh-Sūgh (Sunday, 25th Rabi' al-Thani 850 = 12th March Jul. Cal. 1447 = 1st Nawruz; see Khondamir, II, 3 p. 138) he rose against the Timurids, captured Isfahan, massacred the Ismailis and conquered almost the whole of Persia including Khorasan and the coast of 'Ussak (1452 = 1458). He fought with the Kara-Kyrgyz and unsuccessfully invaded Bayat Shāh; when he was retreating in disquiet over the mountains near Sugh, which separated him from Tabriz, he was suddenly attacked by Uzun-Hasan in his tent and slain (12th Rabi' al-Thani 852 = 10th November 1467). His body was brought to Tabriz and buried there. His reign was marked by the rising of his son Hasan who, confined in Adharbadjan, had taken advantage of his father's preparations against Abu Sa'id to raise the province, and by that of his other son Fir-Daula, governor of Baghdad, who forced his father to besiege him for eighteen months in this city (869 = 1464). Dījahān-Shāh was a freethinker, who led a dissolute life; as he turned eight into day, he was called *Shāh-farāz*, "the bat". After his death the throne passed to Uzun-Hasan and the Ak-Kyrgyz dynasty.

Dījahān-Shāh was also the name of a younger son of Bahadur-Shāh I, the Mughal Emperor of India, who fell at Lahore in 1724 = 1722 in the fighting after the death of his brother Dījahān-Shāh.

DJAHAN-SOZ, or "World-burner", an epithet bestowed upon 'ARAF al-DIN (Huarz), the Ghazni chief who defeated the Ghaznavi king Mahmud and sacked the town of Ghazni and then in a ferocious manner, drove eastward his pick-namans; 345 (1150). He afterwards joined the Ghaz and Ghazni in attacking the Saljuq monarch Sanjar, but was defeated and taken prisoner. He shortly afterwards re-instated in his government of Ghazni, and extended his rule into the Blughian valley. He died at Herat in 591 (1196) leaving the Ghazni Dynasty in a very strong position (See *Ann. Asiatiques*, pp. 163-164 and *Asiatiques* (Suisse), p. 386).

(Cf. *Asiatiques* (Suisse) Diction.)

DJAHANNAM, the Muslim name of Hell. The word is derived from the Hebrew *Sheol* or valley of *Sheol* (Isaiah, xv 8); it was a valley near Jerusalem in which sacrifices were offered to Moloch, in the days of idolatry. The form with the long vowel (*Djahannam*) means a deep well.

The word *Djahannam* and the idea of hell frequently appear in the *Koran*, whether because Muhammad himself had been much struck with the idea or because he thought it useful to indicate to his work upon the feelings of his hearers. He does not however seem to have had a very definite picture before him; in fact, in certain passages, he speaks of it as if it were something portable: "being hell" (God shall say on the last judgment (*Koran* li, 10-11); the angels will then come from their ranks and shall be brought up". In this passage it would appear that Muhammad represented hell as an animal; for him it was a kind of gigantic monster, with gaping, glowing jaws, ready to devour the damned; western artists of the middle ages have sometimes similarly depicted the purgatory of St. Bernard. This explains how in another passage Muhammad says: "hell shall almost burn for fury" (67, 1).

The Muslim *Ghazis*, in his curious eschatological treatise entitled *al-Furqan al-Fakir*, has discussed these Islamic texts. Hell begins to tremble when God commands that it shall be brought in. The angels having told it that God does not wish to punish it but to punish galleys men with it, it allows itself to be led. It walks on four legs, each of which is bound by 70,000 rings; on each of them are 70,000 devils, each of which is strong enough to rend mountains to pieces. In moving, hell gives forth a buzzing, growling and rattling noise; sparks and smoke come out from it and the horizon is filled with darkness. At the moment when it is still separated from mortals by a space of a thousand years, it escapes the hands of the devils and throws itself with a terrible noise on the crowd of men assembled at the place of judgment.

For the conception of hell as an animal is one of the dominant ones in the *Koran*; hence it there is the well-known architectural conception of a hell composed of concentric circles arranged in the form of a stair. This representation has its prototype in antiquity, in the infernal city of the Greeks, in the Assyrian hell with seven gates

in the legends of Ishtar. It is the conception which took hold of the popular imagination in the middle ages, in the east as well as in the west, and we find it expressed with so much power in Dante's work.

Muhammad only quite a rudimentary notion of the structure of hell; he speaks of its gates, specifying that there are seven (*Koran*, xxii, 19, 20, 21). A plan of hell is given in the Turkish work, the *Al-Furqan al-Fakir*. It is situated under the pedestal of the world, above the hell and the fish (corresponding to the Dejahmuth and Leviathan of the Bible) who support the earth. It is composed of seven stories forming a vast under. Above is a bridge thrown the whole length of the world; its bridge, as narrow as the edge of a sword, has to be crossed by the *ghazis* in order to enter Paradise; the souls of mortals cross it in a moment; those of infidels and wicked people take a longer or shorter time to cross it, while those of the unrighteous do not reach Paradise but fall into the gulf.

At the lowest stage of hell is a tree called *Zaffar* which has for flowers the heads of devils (cf. *Koran*, xxii, 19-20), a caisson of boiling and stinking pitch and a well which reaches to the bottom of all things.

The punishments in the Muslim hell are varied and graduated according to the kind and importance of the sins, as in Dante's Inferno; the *Koran* hardly mentions them; but they are described by some authors, notably Suyuti (died 911 A.H.).

These very materialistic representations of the structure of hell and its punishments have not satisfied all spirits in Islam, even the plain and believing *Ghazis* allows himself to explain away a little on this point. Thus the road or bridge thrown across hell has for him only a moral meaning; it is namely the "straight path", by which God conducts the faithful and symbolizes the just mean between opposite faults. It is the boundary between excess and failure, in which perfection lies (see the end of his *Al-Furqan*, ed. Bombay, p. 100). According to Avicenna, the plan of hell chiefly consists in awful sights retaining their awful influences after death; but thus they suffer horribly as they have no bodies wherewith to satisfy them.

The *Koran* appears to hesitate a little on the question of the eternity of punishment in hell; the passages which refer to this point, do not quite agree. Perhaps this uncertainty is due merely to the fact that Muhammad, who was not a speculative philosopher, was not able clearly to face a question into which there entered such an abstract conception as eternity.

"They for whom the language shall be light", it is said in one passage (*Koran*, xliii, 10-11) "are those who shall themselves perish in hell and shall dwell there for ever (*Al-Furqan*)". But elsewhere (*Koran*, li, 10-11) Muhammad says: "The damned shall be cast into fire... they shall dwell there as long as the heavens and the earth shall last, unless God will otherwise".

The Imam Ash'ari has reproached the *Mu'tazilites* and the *Kadarites* with making men despair of the mercy of God, by teaching that mortals are condemned to eternal fire. This, according to him, is contrary to the words of the *Koran* (iv, 126) "he will pardon all sins except *shirk* to whom he will" and to the traditional saying of the

Prophet; "he shall make men come out of hell after they have been burned and reduced to cinders".

This Linton's view is that which has prevailed in Islam.

II; do., *Préface à l'Épigraphie Musulmane* (Marseilles, 1895); Léon Gautier, *La Poésie Préislamique de l'Arabie* (ed. and transl. 1878); A. F. Mehren, *Islam 'l-Hadith All al-Aghuri*: Third Meeting of the International Oriental Congress, 1876 p. 47 (B. Carré de Vaux.)

DIJAHIL (أ) "Ignorant" of DIJAHILIYA, among the Muslims *Dijahil* is a technical term meaning "uninitiated, layman" (opp. *Ahl*, q. v., p. 299).

DIJAHILIYA is the name given to the state of things which obtained in Arabia before the promulgation of Islam, or in a narrower sense the period when there was no prophet, between Jesus and Muhammad (see *ARABIA*). It is the collective noun from *Dijahil*, a pagan Arab, especially a poet of the earliest of the four chronological classes, of which the second is Muhammadan, denoting one who was born in ~~the~~ times, but who died under Islam.

As to the exact meaning of the term *Dijahiliya* the usual opinion is that of J. H. Michaelis and others, that it is "the time of ignorance", as the period before Christianity is named in Acts 17. *Islam* being regarded as the period of enlightenment and knowledge. *Dijahil* "to be ignorant" is the antonym of *Islam* "to know" frequently in the old language and allusions in more recent times. Thus 'Anas, *Shifah*, I. 41. *Ma'ad al-Dijahiliya* *Shim* ~~the~~ *al-hadith*. But Goldziher points out that this sense of *dijahil* is really secondary and that in its primary sense it is opposed not to *Islam* but to *Jaahiliya*, to be eloquent, flourishing, grave, and in means to be wise or might as powerful, and he cites a number of cases in which derivatives from these two roots stand together by way of contrast, e. g. *Al-Shahid*, *Lahiyat al-Arab*, v. 51: *and* *ra'ad al-Jahiliya* *Shim*, Hence he renders *Al-Dijahiliya* "barbaric", (*Islamwissenschaftliche Studien*, I, any other). The word occurs in *Ma'ad* 3, and *Shah* 33, vi; 48, 14.

The heathen and indigenous religion of the *Dijahiliya* have been dealt with above in the *ARABIA*, p. 379 et seq. Goldziher draws a sharp distinction between the Arabs of the South and those of Central Arabia. The former were of a distinctly religious turn of mind; the latter had practically no religion. But this statement has to be modified by the consideration that so many southern Arabs migrated to the north. This was especially the case with *Yasrib*. Moreover, as *Yasrib* Margoliouth remarks, descriptions may yet be found which will throw light on the religious ideas of the Central Arabian tribes, as ~~has~~ been done in the case of the southern and northern. But, so far as we know at present, the people of Central Arabia, to judge from the poetical and other remains, were indifferent to religious ideas. The nearest they could attain to was a vague Islam or belief in Fate (*azdijah*, *manah*). The descriptions of idolatry in the Koran refer largely to times long past and very little at all to Muhammad's contemporaries, whose treatment of Muhammad shows that their reverence for their gods was not very deep.

What was of very much more importance to the pagan Arab than religion was his tribal connection. The clan was the unit from which all the society he had ever built up. Even Islam was powerless to displace his attachment to his tribe, and tribal feuds were carried on after the time of Muhammad as before, if not to the same extent. The great rivalry of North and South was still being fought out in *Hijaz* in the second century (180 A.D., vi 36 et seq.) and even at the present day the population of a district will keep up the distinction of *Haim* and *Yasrib* (*Him*, *Shirah* *Tham*, I. 220 et seq.). Much of the old poetry consists of panegyric of the poet's tribe and satire of those to which he does not belong; and the tribe is sometimes a very wide term.

The pagan Arab's idea of courtesy is expressed by the word *manah*, that is, manliness, virtue. This courtesy mainly in courage and generosity. This courtesy is shown by the number of enemies he kills, by his defending his own clan, but also by chivalrous treatment of his foes very much akin to that of the medieval knight. His generosity appears in his being always more ready to join in the fray than to share in the spoil, in his ~~being~~ in slaying his enemies for blood of the guest and of the poor and helpless, and in his being generally ~~more~~ willing to give than to receive.

Arab hospitality no doubt often led to excesses in both eating and drinking, such as were common in Europe a century ago, and it cost them a hard struggle to give up the use of wine in *Yasrib*. It was considered with some a point of honour to remain in a tavern until the wine-servant was compelled to take down his sign, the wine being spent. At the same time the use of habitual drunkenness was not tolerated. *Umayyad* in *Haim* was expelled from more than one tribe on account of his vicious habit in this respect. Wine-songs continued to be composed long after Islam ~~was~~ forbidden the drinking of wine, poetry and religion preventing in this respect a serious contest. But so strong was the Arab liking for wine that its use was permitted during the *Umayyad* period, though forbidden again under the *Abbasids*.

The position of women among the pagan Arabs was in some respects freer than under Islam. Marriage with two sisters and the *Nikah al-Mahr* were permitted, but on the other hand the institution of the veil was unknown. Divorce was not more easy than it is under the Muslim code and women had the right to it as well as men. Indeed, the manners of the sexes before the time of Muhammad were in some respects quite good. In any case they were capable of being improved, whereas after the law of Islam had once come into force, alteration was not to be thought of. The worst feature of the Islamic marriage code—that of the *mu'tah*—was unknown.

The produce of the soil of Arabia has always been insufficient to support its inhabitants. In certain favoured spots such as the Yemen, and in the oases food was to be had in plenty. The people of Mecca made their living as carriers between the Yemen and Syria, to which fell to ~~be~~ added the profit they made out of the pilgrims who annually thronged their town. But the desert population of Arabia has always been in a state of chronic starvation. Partly for this reason

opposites of the two sexes and the kind of life which suits them. In the book of questions (*Kitāb al-Mas'āl*) he dealt with problems like the following: "Ought jealousy (*al-ḥasād*) to be considered a thing innocent in man or rather as an artificial product of civilisation which ought to be distinguished from pride (*ʿanafa*) and sense of honour (*ḥawās*)". The "Book of Animals" (*Kitāb al-Hayawān*, publ. at Cairo 1323-1324) is undoubtedly the most interesting of the works of Jahiz that survive. **Abū Ḥanīfa's** *History*. It is one of the best products of the budding study of nature among the Arabs. In spite of the quotations from Aristotle, there is very little in it that shows Greek influence. Qualitative from poets occupy as much space as the author's own ~~observations~~. This *History* for *lost* presents recalls the grammarian. The book is closely connected with theology by the author's effort to show the unity of ~~the~~ the equal value to the observer of its constituent parts; for he not only discusses the larger animals but even shows a kind of predilection for insects and very small creatures. In this book we find in ~~the~~ embryo stage theories (evolution; adaptation, animal psychology), the final development of which belongs to our times.

We might connect with the preceding category another series of works by Jahiz in which he deals with the different ~~aspects~~ of society. These books contain a moral and satirical element and therefore belong to the science of *ʿAdab*, [q. v., p. 231] founded by Jahiz. Such, for example, are: The "Book of Tameers", the "Book of Tricks of Tameers" (*Kitāb Ḥikayat al-Samʿān*), the "Book of Young Tameers" (*Kitāb al-Khāṣ*), the "Book of Uprosets", the "Book of Schoolmasters", of "Scriters" and of "Slaves". The following have survived: the "Book of Male and Female Slaves" (*Kitāb al-ʿIḥwān wa'l-Ḥabībāt*), the "Book of Songstresses" (*Kitāb al-Ḥayāt*). The "Book of Slaves" (*Kitāb al-Hudūd*), publ. by v. Vloten, Leiden 1900, introduces us to the private life of the slaves of Bagdad. The "Book of the Customs of the great Lords" (*Kitāb al-Ḥikāṣ al-Mufāḥ*), of doubtful authenticity, contains a mass of interesting details on etiquette at the courts of the Persian kings and the Caliphs.

In Rhetoric, Jahiz attaches himself to the school of Ibn al-Balkhā, Saḥl u. Ḥarun, al-Balḥī, etc., on whose style he modelled his own and in whose ~~works~~ he published several of his own works like them he composed "Letters" (*Ḥudūd*). Short discourses on any subject, addressed to his ~~opponents~~. In his better works of this class (*Risāla f. l-Maʿād* = *l-Maʿād*, *f. l-Maʿād* = *l-Maʿād*, *f. l-Maʿād* = *l-Maʿād*, etc.), the Arabic language attains a wealth of expression which it will never again reach without losing in vigour and depth. The "Book of Exposition and Demonstration" (*Kitāb al-Bayān wa'l-Taḥṣīn*, Bihār, 1313), was one of the last products of his pen. It is a ~~new~~ compilation, a kind of anthology of Arab eloquence, in which selections from poets and orators are given to illustrate the often very original views of the author.

The faults of almost all the works of Jahiz are the want of order in the editing and arrangement of the matter, the digressions and a very pronounced fondness for isolated facts and anecdotes. To sum up, he was rather an observer than a thinker, a man of letters rather than a

philosopher. In spite of his wit and the often surprising truth of his remarks, we can only place his works among the *Adab* (i. e. edifying and entertaining literature, science). For to the interest in his works apart from literary and grammatical interest mainly consists in the valuable material he gives us on the public and private life, the customs and point of view of the Arabs of his time and preceding periods.

The influence of Jahiz on Arabic literature has been very considerable. Among his imitators may be mentioned the pupil al-Muḥammad, the author of the *Adab*, the geographer Ibn al-Fakḥ and the encyclopaedist Thābit al-Baḥārī's "Book of Advantages and Disadvantages" (*Kitāb al-Maḥāṣin wa'l-Maʿānī*) and the "Book of Sciences and Antitheses" (Leiden 1898) are direct descendants of the school of Jahiz. Maḥmūd had read him. He admired him and quotes him frequently. The influence of his *Kitāb al-Ḥayawān* on the treatises (*Ḥayāt*) of the Ḥayawān al-Ḥayāt is a point which is quite worth careful investigation. The zoologist Kaawir, Dessert, and the anonymous author of the British Museum *Ala* (Add. 21,003) owe a great deal to Jahiz.

(where Nos. 3, 3, 7, 9, should be omitted); Arnold, *al-Maʿād*, p. 38 ff. seq.; al-Baḥārī, *al-Maʿād*, p. 160 ff. seq.; Harten, *Die philol. Systeme der islam. Theologie* (Leiden), p. 320 ff. seq. Apart from the works already mentioned as published, the printing of a collection (*Maḥmūd al-Rasāʾil*, 1324) has been begun in Cairo.

DIJLĀWĀN (from *Halat* *Ḥalā* = below, or *sunah*), province of Balḥistan, lying below or S. of Sarawān, giving its name to one of the two great divisions of the *Ḥalab* confederacy: area, 21,125 sq. m.; pop. (1901), 224,073, mostly *Ḥalab*, with here and there a few *Ḥalab* and *Ḥalab*; capital, *Ḥalab*. It is mainly a grazing country, supporting vast numbers of sheep and goats, with some camels and a few horses.

Bibliography: *Balḥistan Gazetteer*. Vol. VI. (Bombay, 1907). (J. S. Corbett.)

DIAM u. *Sawān* and *Muḥsin*, a chief of the *Ḥalab* tribe, called al-Faḥḥāḥ by name and al-Samānī by others, a *Ḥalab* man and theologian, who attached himself to *Ḥalab* in *Ḥalab*, the "man with the black hammer", during the reigns in *Ḥalab* towards the end of the *Ḥalab* period and therefore put to death in 125 (745-746) by *Ḥalab* al-*Ḥalab*. At a theologian he occupies an independent position in as much as he agreed with the *Ḥalab* on the one hand in teaching that belief is an affair of the heart and with the *Ḥalab* in denying all anthropomorphic attributes of God, but on the other hand he was one of the strongest defenders of *Ḥalab* (see the article *Ḥalab*, p. 985). He only allowed that God is all-powerful and the Creator because these are things which cannot be predicated of any created being. He further denied the eternity of Paradise and Hell. His followers, called *Ḥalab* after him, survived down to the 14th century around *Ḥalab* but then adopted the doctrines of the *Ḥalab*ites.

proposals, but liberated on the intervention of the Alakal, governor of Gabes, to whom he had addressed a flattering poem of which however he afterwards disowned the authorship. On leaving Tarpoll, he crossed the town; when it fell into the hands of the Christians (795 = 1394) this was regarded as the effect of his cause. He retired to Djerba where he died in 50 (1349-1350) according to al-Shamshih, or in 710 (1320-1330) according to Abu Rza, and was buried in the great mosque.

(RENE HANSEN.)

DI'AZ (literally "running") is commonly reckoned as one of the Five Orders (*al-ahkam al-Akhamia*; best in Goldziher, *Zohieren*, pp. 66 et seq., see *ibid.* *ibid.* *ibid.*, L pp. 379 et seq.) and is synonymous with *muhihi* "permitted", an action legally indifferent, neither forbidden nor commanded nor recommended, the doing of which will not be rewarded, nor the omission punished. But *DI'AZ* is much wider, and from its meaning of "current", "allowable", *muhihi* not only *muhihi* but anything not legally hindered, thus *muhihi*, *muhihi* and *muhihi*. Further, it can be taken intellectually as well as legally and mean what is not authentic, whether necessary, probable, improbable or possible (*Dir. of Trian. Term.*, L pp. 207 et seq.).

(D. R. MACDONALD.)

DIJAKAT. [See ZAKAT.]

DIJALAIR, a Mongol tribe, cf. the article MOSCOW. Hama Dzung (q.v.) belonged to this tribe and Djalair is therefore also used as the name for the dynasty founded by him in Baghdad, which began on the death of Salih 736 (1335) and was replaced in 1411 by that of the Kara Kuyunlu. Hama, who died in 757 (1356) was followed by his son Shihab al-Din (q.v.) till 776 (1374), the latter by his son Husain (d. 784 = 1382-1383), Sultan Ahmad (d. 813 = 1410), and Bayand and by other descendants. The end of this dynasty was brought about by the campaigns of the world-conqueror Timur (q.v.). Cf. Cl. Huart, *Mémoires sur les sultans de la dynastie des Hémakien*.

DIJALAL (A.), "Majesty", "excellence".

DIJALAL, Bukhara, Salyid, commonly known as **DIJALAL** or **DIJALAL** (*DIJALAL*), the son of Salyid Ahmad b. Salyid Djalal al-Din, Bukhara, and was born in 705 A.H. (= 1305 A.D.). He received his spiritual training from his father and from Sheikh Bala al-Din, a grandson of Rabi' al-Din Zakariya (q.v.); he was made a *khawfi*, first in the Suhrawardi, and afterwards in the Chishti order. He died in 785 A.H. (= 1383 A.D.) and was buried at Tashkent, where his grave is still an object of veneration. His followers, who call themselves *Djalali*, are ragged and fakire, with no fixed dwelling-places; they pay little attention to prayer, drink *hama* (Indian beer), and eat *makar* and scorpions; they shave their beards, wear white and yellow, and wear glass armlets and a woollen cord round the neck. They are found in scattered groups in Northern India and are said to be common in Central Asia.

Bibliography: Mrs. Shikoh, *Safinat al-Awfiya*, 2 v., Hama Djalal, *Sirat al-Awfiya*, 2 v.; Abu T. Fayl, *Asbat al-Siyar* (ed. Blochmann), II, 283-289; *Census of India*, 1891, vol. xii, p. 295-296.

DIJALAL AL-DAWLA, an honorary title borne by several rulers, for example — in addition to the Bayid given below: — the Ghaznawid Muhammad (q.v.) and the Khwarizmid Nusr (q.v.).

DIJALAL AL-DAWLA AND **TAMU** b. **BALA** AL-DAWLA, a Bayid, born in 383 = 993-994. When Sultan al-Dawla was appointed Amir al-Umra' on the death of his father Bala' al-Dawla in 405 = 1012, he obtained the governorship of Hama to his brother Djalal al-Dawla. The latter remained here for several years without taking any part in the dissensions within the Bayid family. In 415 = 1024-1025 Sultan al-Dawla died and his brother Muhammad al-Dawla also died in the following year. Djalal al-Dawla was then proclaimed Amir al-Umra'; but when he did not appear in Hama to take up his office, Abu Khatib, a son of Sultan al-Dawla, was applied to, but he was too little able to undertake the office. When Djalal al-Dawla learned that his brother was no longer mentioned in the *Khutba*, he advanced on Baghdad with an army, but was defeated and had to retire to Hama. In Ramadan 418 = October 1027 he appeared in the capital however, in answer to an invitation from the Turks. He could not come to terms with the people of Baghdad and feared the influence of the Agha. His friendly relations with the Turks were not long maintained. In the following year a revolution broke out in Baghdad and Djalal al-Dawla was only able to restore order with difficulty at the same time. Abu Khatib won Hama without striking a blow, and in 420 = 1029 he succeeded in gaining possession of Wasir also. But when Djalal al-Dawla made a raid on al-Ahwas, Abu Khatib wished to enter into negotiations for peace; Djalal al-Dawla, however, preferred to sack al-Ahwas and carried off the women of Abu Khatib's family prisoner. At the end of Rabi' I 421 = April 1030, Abu Khatib advanced against Djalal al-Dawla but was defeated after a three days' battle and had to take to flight, while the latter occupied Wasir and then entered Baghdad. Hama also was taken but soon re-occupied by Abu Khatib's troops. In Shawwal (October) of the same year, the latter was again defeated at al-Madina. This town fell into the enemy's hands but when Abu Khatib sent reinforcements, Djalal al-Dawla's supporters were driven again. In the capital the inhabitation of the Turkish mercenaries continued to increase and the Amir al-Umra' soon lost the last remnants of his power. In 423 = 1032, Djalal al-Dawla's palace was sacked, and the only course left for him was to flee the town and go to Tashkent, while Abu Khatib was proclaimed Amir al-Umra' by the Turks in Baghdad. He later at this time was in al-Ahwas and as he had no particular ambition for the Amirate, Djalal al-Dawla was able to return to the capital about six weeks later where however matters went from bad to worse. In the following year his palace was again stormed and plundered, and a second time the now quite helpless Bayid had to flee. This time he went to al-Bukhara, where he was protected by the Shih, and he remained here till the rebels invited him back to Baghdad. In

the same year Abu 'l-Kasim governor of Diyar rebelled against Abu Kallijär because the latter intended to depose him, and invited Ijäl al-Dawla's son al-Malik al-Aziz to help him. The latter was driven out in 425 = 1033-1034 and homage was again paid to Abu Kallijär in Raqqa. In the capital untroubled success reigned and in 427 = 1035-1036 another military stroke was in the army, which was however put down by the intervention of the Caliph. In 428 = 1036-1037 Basarghan, one of the most powerful Turkish chiefs in Baghdad, whose position was threatened, called in the help of Abu Kallijär. Ijäl al-Dawla was once more driven out of Baghdad; but when he received support from Kirwän b. al-Makallid of Mosul and Dihäim b. 'Ali of Hilla and the Daisamites in Baghdad quarrelled with the Turks, he was soon able to drive out Basarghan and occupy the capital. Basarghan was captured and put to death while Abu Kallijär ultimately made peace with Ijäl al-Dawla. Their final reconciliation was sealed by the marriage of one of the latter's daughters with Abu Manjur, a son of Abu Kallijär. About the same time Ijäl al-Dawla assumed the ancient Persian title "King of Kings", which title corresponded with his own importance in the general chaos. In 431 = 1039-1040 or according to others 432 = 1040-1041, he was to put down another Turkish rising in the capital. Ijäl al-Dawla died on the 6th Shaban 435 = 19th March 1044. It was his reign that brought the Buyid kingdom to its lowest depths of humiliation.

(R. V. ZETZLER.)

IJALAL AL-DIN MANANDARU, the last of the Khwarizmshahs, was the eldest son of Muhammad and had been elected by his father the Ghazni lands he had conquered with the capital Ghazni, while another son Salghush was appointed his successor. The Mongol conquest under Chingis Khan (q. v., p. 856) rendered their dispositions worthless; for Muhammad is said to have recognized before his death in 617 (December 1220 or January 1221) that only a valiant warrior like Ijäl al-Din was able to rule the kingdom in the dangerous situation in which it then was. But this did not please certain Turkish Amirs, who when Ijäl al-Din had come to Mawghlak with his two brothers Salghush and Aghash from his father's deathbed as an infant, formed a conspiracy to seize and kill him. Ijäl al-Din was just able to escape this danger by taking flight to Khwarizm, whether his brothers followed him, because the Mongols made any long stay in Khwarizm impossible. But while his brothers were captured by the Mongols on the way and slain, Ijäl al-Din succeeded in escaping via Nishapur, Zhetysay and Samarkand. There he collected an army around him again and put to flight a body of Mongols not far from Persia; but when a considerable body of his troops soon afterwards left him, Ijäl al-Din, continually pursued by the Mongols, had to escape to India. He was overtaken by hostile troops on the bank of the Indus but escaped after a valiant defence by himself and

his men by plunging his horse into the river and successfully swimming to the other side (Nov. 1231).

Ijäl al-Din remained in India for about three years. During this period he led many stirring adventures with the Indian rulers Shams al-Din Iltutmish (q. v.) and Khusrau, which we must pass over here, and then went to Kermän in 621 (1232) where Rukn al-Din [q. v., p. 703] had made himself ruler. The latter submitted to Ijäl al-Din and was confirmed by him as governor of this province. Ijäl al-Din himself continued his journey to Persia and the Persian 'Iraq, where his brother Ghiyath al-Din Farukh ruled, but soon found himself forced to submit to Ijäl al-Din. Chingis-Khan had in the meantime gone back to Mongolia, but Ijäl al-Din did not think of using the opportunity to restore peace and order to the devastated lands, but his father had once ruled. On the contrary he quarrelled with the 'Abbasid Caliph al-Nasir, and with Salghush (q. v.), the Arab of Adharbadjan, and thought it his duty to fight the infidel Christians. During these continual campaigns the Mongols again appeared in the lands of Islam and when Ijäl al-Din was preparing to fight them, he quarrelled with his brother Ghiyath al-Din, who left him his troops and retired to Kermän in 625 (1238) where he met his death through the intrigues of Rukn al-Din. The result was that though Ijäl al-Din was defeated in the battle with the Mongols, the latter suffered such heavy losses that they did not continue the war but retired again. Ijäl al-Din's power thus remained undisturbed and he found nothing more pressing to do than renew the siege of Ghazni in 626 (1239) which belonged to the 'Abbasid al-Nasir (q. v., p. 484), which he previously attempted to take. This time he was successful in taking the town, though after a six months' siege. The negotiations, which he entered into during this period with the Salghush of Asia Minor, Kalyatid I., were so far from being successful in their object that the latter took the side of al-Nasir and the two princes took the field against him, which resulted in his being severely defeated in 627 (1239) near Armanjün. This peace was soon afterwards agreed to in view of the common danger from the Mongols, but when in the following year the Mongols actually appeared again, Ijäl al-Din was not able to collect an army to drive them back. Accompanied by a few faithful followers he was able to escape his enemies, who followed his camp here, for a period, till he was finally captured by a Kurd and while he was lying in the latter's house murdered by another Kurd in 628 (1231).

IJALAL AL-DIN RUMI, one of the great mystic poets of Islam, was born at Balkh in 621 (1207). His family claimed descent from Abu Bakr and was connected by marriage with

the royal family of Kh-wārazm. When three years of age (607 = 1210), he was taken by his father to Nishapur and presented to the aged 'Alī. The latter, according to the legend, predicted his future greatness and gave him his *Book of Secrets*. His father Bahā' al-Dīn Walad had to leave Balkh at this time, because he had incurred the wrath of the caliph Muḥammad Khwāzmi. Khwāzmi took the young Djalāl al-Dīn with him and after visiting Baghdad, Mecca, Damascus, Malatya, Antakya and Larissa finally settled in Konya about 1226 or 1227 (623-625) where he found a protector in the person of the Seljuq prince 'Alā' al-Dīn Kaikubād. He was appointed professor there and on his death in 628 (1230-1231), Djalāl al-Dīn succeeded him in the chair; he never again left Konya except for a short journey.

The event, which had the greatest influence on his intellectual and moral life, was his meeting with the Shī'ī Shams al-Dīn Suhrawardī. The latter in the course of his wanderings, came to Konya; here he saw Djalāl al-Dīn, whom he exercised a powerful influence. Rumi acknowledged what he owed to his master by dedicating a great part of his works to him. As a result of this meeting, he abandoned the study of sciences in order to devote himself entirely to mysticism. He founded the order of Mawlawi or "dancing dervishes"; contrary to the general Muslim practice he gave a considerable place to music in the ceremonies of the order. He died at Konya in 672 (1273).

His tomb is in the monastery founded by him. The architecture (see this article p. 422) of this *maṣr* is of remarkable dignity and beauty; the mosque is adorned with splendid mosaics, valuable tapestries, embroideries and beautifully carved inscriptions. His successors are interred in Djalāl al-Dīn. The order has always had at its head one of his descendants who live in Konya; he is called the *Qatebi* (q. v., p. 531). Djalāl al-Dīn is often invoked under the title *Mawlānā*.

Al-Rumi's principal work is the *Mathnawī*, a vast poem in six books, a mixture of fables, anecdotes, symbols and reflections. It is meant to illustrate and explain Shī'ī doctrine; he took forty years to compose it. He also wrote a *Diwān* and a prose treatise entitled *Faḥr al-faḥr* "what is within is within", this last work which is unknown in Persia is to be found in several European libraries. Djalāl al-Dīn is a poet of the first rank; he possesses the most diverse qualities: variety and originality of imagery, dignity and pictorialness, learning and charm, depth of feeling and of thought. The composition of the *Mathnawī* is, it must be granted, very disjointed; the stories follow one another in no order; the examples suggest reflections which in their turn suggest reflections which in their turn suggest others so that the narrative is often interrupted by long digressions; but this want of order seems to be a result of the lyrical inspiration, which carries the poet along as if by leaps and bounds, and if the reader yields to it, the effect is by no means displeasing. It would be fatiguing to read the book right through, but if one opens this immense poem by chance and reads a few pages, one cannot fail to be deeply impressed.

As a philosopher, al-Rumi is less original than

as a poet. His teaching is that of Sūfism, expressed with glowing enthusiasm: it is not systematically expounded and the thought is sometimes carried away by the lyrical fervor; to re-construct this philosophy, it would be necessary to collect the elements, which are scattered throughout the book and formulate a number of principles from them.

As amongst other Sūfī writers, many Neo-Platonic ideas are found in Rumi: others are closely allied to those of Christian mystics; some are very boldly expressed which may be excused on account of the poetic form. As an example of the last we note this thought, delicate enough in theory, that even evil contributes to the glory of God, that it makes part of his perfection; a painter who wishes to represent the ugly, shows skill if he renders it in a hideous fashion: "The ugly says: O King, Creator of the ugly, you are as powerful in the beautiful as in the ugly which is despised" — Another very bold idea is that of an old Sūfī who says to the Shī'ī Bāyezīd, when he was going on a pilgrimage: "Go around me, that will be equivalent to going round the Ka'ba: although the Ka'ba is the house of God, destined by him for the accomplishment of religious rites, my being is superior to it as the house of his secrets". — The episode of Moses and the bushman has often been quoted, in which the author expresses to touch that the manner of expressing the religious feeling is of no importance, that rites and formulae are nothing and that the feeling is everything: "What can words do for me?" says God to Moses, "It is a glowing heart that I want; inflame the heart with love and pay an heed to thought or expression".

Another well known passage is one that contains a kind of doctrine of transmigration: "I die as a stone and become a plant; I die as a plant and am raised to the rank of an animal; I die as an animal and am reborn man... dying as man, I shall come to life again an angel... I shall even transcend the angel to become something no man has seen, and that I shall be the Nothing, the Nothing". And lastly this apparently pantheistic fragment, in which the poet identifies himself with all nature: "I am the mote in the ember, I am the hall of the sun; I am the glow of morning; I am the hush of evening, etc."

DJALALABAD, town in Afghanistan, near the Kabul river, almost half-way on main route from Peshawar to Kabul, headquarters of a large district of the same name; permanent population at early 2000, but this number increases tenfold during the winter, when the Amir often takes up his residence here in a fine palace built in 1891. It takes its name from the Moghul emperor Jhalal al-Din Akbar, who is said to have founded it in 1570 A.D. It is famous in history for the defence of the garrison under General Sale during the winter of 1841—1842, when the rest of the British army had been destroyed.

Little's Gazetteer, W. Broadfoot, *The Career of Major General Broadfoot*, pp. 47—109 (1885); *Imperial Gazetteer of India* (Afghanistan), p. 66 sq. (Calcutta, 1905). (J. S. CORTON.)

DJALALI L. e. *al-Tarikh al-Djalali*. Peta *Tarikh al-Djalali* = the Djālālī calendar, also *Tarikh al-Malik*, so-called after the Saljuq Salju Malik Shah al-Ap Arslan, who in 467 (1074-1075) called a conference of astronomers, among whom was the famous mathematician and poet 'Umar b. al-Thalibi al-Khalyfawi (q.v.), at his newly erected observatory (the site is uncertain, Isfahan, Ray or Nishapur are possible) and ~~to~~ them to regulate the ancient Persian calendar again and bring it more into agreement with the results of astronomical observations and calculations. The existing Persian system (the era of Yazdegerd) ~~was~~ follows: the year had 12 months of 30 days each and the five odd days (*al-mutarafah*, Pers. *mutarafa*) were added to the eighth month (*abân*) as intercalary days. But as the year has approximately 365 $\frac{1}{4}$ days, the error amounted to one day every ~~365~~ years and one month in 120 years so that one month was intercalated every 120 years and the 120th year therefore ~~had~~ 13 months (for the various views on this intercalation see the notice quoted below) in this calendar, which was however driven much out of line by the Muhammadan after the Arab conquest, the ~~error~~ was the same as in the Julian but it was inferior to the latter in this respect ~~that~~ an adjustment was not made every four years but only every 120 years. — We ~~are~~ not quite clear as to what change was made by Jhalal al-Din's astronomers. Authorities are only agreed that they retained the 12 months with their 30 days each and their old names, as well as the five intercalary days, but these were added at the end of the twelfth month (*abân* or *mutarafa*, Arab. *Itmarafa*) and that a further intercalary day was now inserted every four years (where is not known, probably after the five days). Two different and not quite clear accounts exist of the institution of the cycle after the expiry of which an adjustment with the true time would be reached: according to 'Ulagh Beg (died 1449) ~~this~~ this intercalation (one day every four years) had been repeated six or seven times, it was postponed to the fifth year (instead of to the fourth); according to Kash al-Din al-Shirazi (died 1311) ~~it~~ was not postponed till the fifth year until the seventh or eighth time. This

statement cannot be otherwise interpreted than as has been done by later and better scholars, namely, that from the beginning of the era the years 4, 8, 12, 16, 20, 24, (according to al-Shirazi 28, also) were leap years of 366 days, but after that the next leap year was 29, (or 33), followed by 35, 37, 41, 43, 49, 51, 57, then the ~~next~~ leap year was not till 62, (according to al-Shirazi 37, 41, 45, 49, 53, 57, 61, 65, and then 70); ~~this~~ cycle was then repeated again in the same way, according to 'Ulagh Beg, whose account is probably the correct one, there would be 15 intercalary days in 62 years, which would give an average year of 365, 241 935 days (the ~~average~~ length of 365, 242 $\frac{1}{2}$), the error would therefore be one day in about 3770 years, while in the Gregorian calendar it is one day in about 3330 years. The Djālālī calendar would thus be somewhat more accurate than ours, not as 'Ulagh Beg thinks, less accurate, because it has taken the average length of the tropic year as 2" too long. On the other hand he is right when he says it is somewhat complicated; but on the other hand the equivalent to true time is made in a much better period than in the Gregorian calendar, viz. in 62 instead of 400 years. — If Kash al-Din al-Shirazi's account were the correct one, there would be 17 intercalary days in 70 years, which would give an average year of 365, 242 $\frac{1}{2}$ days, with an error of one day in c. 1540 years. — In his translation of the *Yazdegerd* to 'Ulagh Beg's tables L. A. Delille has thought the accuracy of the Djālālī calendar was still higher, but here he is wrong, he assumed a cycle of 101 years with 39 intercalary days, which gives an average year of 365, 242 $\frac{1}{2}$ days, so that an error of one day would not be made for 28,000 years. Although 39 intercalary days appear in 101 years of the Persian calendar, this number does not however complete a cycle, which is only done by 3X62 or 186 years and the 25 years which follow the 101, increase the error with their 6 intercalary days. — The *Lexique du Dictionnaire des Langues*, (for 1854) and following is a number of modern astronomers thought that a cycle of 33 years with 8 intercalary days could be recognized in the Persian calendar, which could have been the most accurate of the calendars yet devised, with an error of only one day in c. 5000 years. This cycle was obtained by the assumption that a intercalary day was inserted every four years for seven times and for the eighth time only after the fifth year; this result cannot be obtained from the statements of 'Ulagh Beg and Kash al-Din, as we ~~know~~ ~~know~~ them, but it is by no means impossible that error may have crept into these accounts and that both of them should read: "when this intercalation has been repeated six to eight times", in place of "six to seven times" or "seven to eight times"; for in Persian the numerals *haft* (7) and *ast* (8) are easily confused, as in Arabic are the figures for 6 and 7 (the letters *shams* and *dal*). We would thus have 16 intercalary days in 66 years, or 4 in 33, which is the same thing, but it is not easy to understand why the Persian astronomers should have decided on the complicated method if they could obtain the same accuracy with the simpler mode. But on the other hand we must grant that the table in the *Yazdegerd* to 'Ulagh Beg's tables, for the sum of the days in the years 1 to 1000,

agrees better with the assumption of 8 intercalated days in 33 years than with that of 15 in 62 years. Gauss has proposed another hypothesis which Bataine has given in his *Die Chronologie in ihrem historischen Umfange* (Vienna, 1844), namely, that there were seven cycles of 33 years with 8 intercalated days in each cycle combined with a 37 year cycle with 9 intercalated days; this gave an average year of 365.242537, which agrees to five decimal places with that given by Uigh Beg. — The Persian astronomers took as the New Year's Day (Nowrūz) i.e. as the beginning of the new era, the 10th Ramezān 471 A.H. = 15th March 1079, on which day the sun entered the sign of the Ram. Whether this era ever attained any vogue alongside of the Muharramzān, and how long it survived, cannot be ascertained from the authorities; Waken however mentions that the poet Sa'ifi (d. 1263) in his *Gulistan* praises the month Anlilabāst (Jalāl), i.e. the second month of the Djalāl year (middle of April to the middle of May) as the finest season of the year.

(JL. STRECK.)

DJALALZADE MUSTAFĀ CELEBI, known as **Koca Nigârânî**, belonged to Tonia in Asia Minor where his father held the office of Kâğı, entered the service of the state in the reign of Selim I as a clerk in the Imperial Divân, accompanied the Grand Vizier Ibrahim Pasha on his mission to Egypt in 1530 (1524) (v. Hammer, *Geschichte des Osman. Reichs*, iii. 39 et seq.) and on his return was appointed Râis al-Katâib (Secretary of State) in 941 (1535) he accompanied Sulaimân I on the Persian campaign and was promoted on this occasion to be Nihâdî (Keeper of the Great Seal, *hâfiz*), which office he held till 964 (1556-1557), supported by the favour of Ibrahim Pasha, whose confidence he had become, and of the Sultan, in this year, while holding the office of *munferrih-katib* (chief king's messenger) he resigned that of *nihâdî*, at the instigation, it is said, of the Grand Vizier Rustem Pasha who was not well disposed to him. During Sulaimân I's last Hungarian campaign in 974 (1566), in which he accompanied him as *munferrih-katib*, he was again appointed to the office of Nihâdî; he only survived the Sultan a year and died in Râis' h. 975 (beginning 5th October 1567); of his chronogram in his epitaph in *Hudûd al-Mu'arrif*, i. 295. The Turks speak highly of Djâlâzâde as a brilliant stylist and an extremely capable official, in the office of Râis Efendi and Nihâdî he was entrusted with important negotiations with foreign states (v. Hammer, *Gesch. d. Osman. N.*, iii. 131, 159; *Corneille de Sappes, Mémoires*, 137—138; *Uray, Urkunden*, etc., ii. 1, p. 20) and obtained an insight into all the branches of the history of the state. He took advantage of his opportunities to write a history of Sulaimân I, planned on a large scale, the *Tuhfat al-Manâzil wa Durrat al-Manâzil*, only a part of which was completed; it comes down to the year 962 and the author had finished the

earlier parts by 941 A. H. (v. Hammer, *Gesch. d. Osman. N.*, iii. 158 et seq.). We also possess from his pen a very remarkable history of Selim I (*Mu'athir Selim-Nâmâ*); considerable extracts have survived of his edition of the laws *Kanûn-Nûs*, which Ewlyâ Efendi, i. 174, and Poloni, i. 43, mention as a separate work. A translation of Bashîr's Persian biography of the Prophet, *Al-Nabî al-Muhammadi wa Ma'rifat al-Sunna* and an ethical work *Mawâhib al-Khatib fi Ma'arif al-Aghlâl* are also ascribed to him. His poems, in which he calls himself Nihâmî, are scattered throughout his historical works. He built a mosque in the Aiyâd suburb, which is known as the Mosque of Nihâdî (Hudûd, loc. cit.).

Bibliography: In addition to the works quoted above, *Cat. of the Turk. Manuscr. in the Br. Mus.*, p. 49 et seq.; Khâssar al-Khass, p. 5 et seq.; *Lepsius*, 335 (ed. 1314 32.); Tashkîzi, ii. 105. (J. H. MONTAGNAK.)

DJALUL, a Turkish poet of Bursa, who had adopted the same *wasfîy* as two of his less known predecessors, the one of whom belonged to Bursa, and the other to Adrianople. He was the son of Hamîd and was long in Constantinople the poet Adâ's inseparable companion in his dehaucheries; in his native place he was looked upon as a madman. He lived in the reign of Sultan Sulaimân I, was the contemporary of Baki (q. v., p. 603) and left two long poems in complete, *Emâs a Ma'ânî* and *Adâriw u Shirin*; his numerous *ghazals* are collected under the title *Gul-i yad berg*; "the Hundred-leaved Rose". A translation of the *Ghâzâtnâmâ* ascribed to him probably never existed.

Bibliography: v. Hammer, *Geschichte der Osman. Dichtkunst*, ii. 198; Gibb, *History of Ottoman Poetry*, iii. 159. (C. L. HUNTER.)

DJALULA, (also **Djaulâ**), a town in the Irak (Babylonia) and, in the medieval division of this province, the capital of a district (*sanjak*) of the circle Shâhî-Kubâh in the Eastern Tigris valley. Djaulâ was a station on the important Khorâsân road, the main route between Babylonia and Irak and was about equally distant (7 parasangs = 28 miles) from Dastâjird (q. v., p. 226) in the S. W. and Khânîkîn in the N. E.; it was watered by a canal from the Diyâlâ (q. v., p. 983) (called Nahr Djaulâ), which again joined the main stream farther down at Bagdâd (q. v., p. 558). Near this town, which seems from the statements of the Arab geographers to have been quite unimportant, a severe defeat was inflicted by the Arabs on the army of the Sassânian king at the end of the year 16 (= 637 A. D.).

According to Mas'ûdî (c. 740 = 1340), the Seldjûk Sultan Mâlikshâh (1063—1092 = 1073—1092) built a watch-tower (*ribât*, popularly *ribât*) which probably was *ribât* as a *caravanserai* in Djaulâ; after his time the place was usually called Kûbat (Djaulâ). This statement helps us to locate the site of Djaulâ with certainty; for we may be no doubt that Ribât (Djaulâ) is to be identified with the modern Khil-rûbâ; besides, the distances given by the Arab geographers for Djaulâ, also our Khil-rûbâ; its geographical position is: 34° 10' N. Lat., 45° E. Long. (Greenw.); it lies within the mountains, at the east end of the pass through the Jebel Hamâm. The Diyâlâ flows past at some distance to the east of the town. The name Khil-rûbâ, popularly corrupted

after a brief stay in India and Cairo, where during a fortnight's stay he came in contact with the Ashar circles and held private lectures in his dwelling, he reached Constantinople (1283 = 1860). At a great reception he presented him, a very hearty welcome awaited him at the hands of the leaders of society in the Turkish capital. He was appointed to the council of education and invited to deliver public lectures in the Aya Sofia and the Ahmediya Mosque. A lecture for students delivered by him in the *Mad al-Funda* before a distinguished audience, on the value of the arts, in which he mentioned the gift of prophecy among the various social activities, gave Hasan Fakhri, the Sheikh al-Islam, who was jealous of his growing influence, an opportunity to charge him with revolutionary views; he charged prophecy among the sciences the account of the intrigues of his opponents against him he had therefore to make up his mind to leave Constantinople and go to Cairo, where he was very kindly received by the authorities and educated classes. The government granted him an annual allowance of 12,000 Egyptian piastres without binding him to any definite official duties. He was to instruct the young men eager for knowledge who gathered round him in his house and in unrestricted intercourse in the higher branches of philosophy and theology and at the same time pointed out to them the way to literary activity. His politics also he influenced these around him in the direction of a nationalist revival and liberal constitutional institutions; his activity was without influence on the nationalist movement which came to a head in 1882 and led to the bombardment of Alexandria, the battle of Tell el-Khar and the English occupation. Shortly before this, in 1879, the influential Egyptian, whose political activities were as inconvenient to the English representatives as his regeneration of philosophical studies had been irritating to conservative circles in the Ashar, was at the instigation of the former deported and detained in India (Vaidarshah), and later Calcutta) until, after the suppression of Arabi's rising, he was allowed to leave India. During his stay in Vaidarshah he composed his refutation of materialism (cf. the article DAWUD p. 894). From a memorandum by W. S. Blunt who was interested in Egyptian politics (in Browne, p. 401) we learn what is not mentioned by other biographers, that Ujmal al-Din went from India to America, where he spent some months in order to obtain introduction as an American citizen without however carrying out this intention. In 1883 we find him for a brief period in London, soon afterwards along with his friend and devoted pupil, afterwards the Egyptian Mufti Muhammad 'Abdub, in Paris where he devoted his literary activities to giving vent to his disapproval of English intervention in the affairs of Mohammedan peoples. The most prominent and influential newspapers opened their columns to his essays, in which much attention was paid by competent authorities, on the Oriental policy of Russia and England, conditions in Turkey and Egypt, and the meaning of the Wahabi movement which had meanwhile arisen in the Sudan. To this period also belongs his polemic with Ruzsa Khan, ending with the latter's Sorbonne lecture on "Islam and Science" in which he stated that Islam

did not favour scientific activity; Ujmal al-Din sought to refute this in an article which first appeared in the *Journal des Debats*, (later in German, see *Review*). It may be mentioned in passing that, soon afterwards, Khan's lecture was translated into Arabic by Hasan Efendi 'Agha and lithographed in Cairo (n. d.) along with a refutation ready. The greater part of Ujmal al-Din's literary and political activities in Paris were however devoted to an Arabic newspaper published at the expense of a number of Indian Mohammedans in conjunction with Muhammad 'Abdub (the actual editor), entitled *al-Nawazid al-Hawadith* ("the new Indian world") which was originally edited in English policy in Mohammedan countries (particularly India and Egypt); the newspaper, the 12th number of which appeared on the 15th Jumada I 1301 (15th March 1884) was suppressed by the English authorities in the East; its introduction to Egypt and India prevented, and it was only possible by sending it under covered post for it to reach those whom it was intended to influence (information supplied by Ujmal al-Din himself). Although as a result of these obstacles it was destined to but a brief existence (Ujmal al-Din and Muhammad 'Abdub brought out 18 numbers in 2 months, the 18th appearing on the 16th Dhu l-Hijja 1301 = 17th October 1884), it exercised great influence on the awakening of liberalist and anti-English views in Muslim circles and may be considered the first literary harbinger of the nationalist movements in the Mohammedan territories of England, which were gradually strengthened by it. That its authority is not lessened at the present day, may be concluded from the fact that quite recently (1328 = 1910) after the lapse of a quarter of a century a new edition of the *Review* has been prepared by Husayn Muhyi al-Din al-Mabkh, editor of the *al-Balagh* newspaper (printed by Nash al-Hindi Sudan). — In spite of his frankly acknowledged Anglophobe agitation, through the intervention of W. S. Blunt, the leading statesman of England entered into personal relations with Ujmal al-Din with the object of putting down the Wahabi movement in the Sudan but no practical result was attained. Soon afterwards (1886) Ujmal al-Din, whose agitation for the awakening of Islamic peoples was penetrating far and wide, received a telegraphic invitation to the court of Shah Naser al-Din in Tehran, where he had a most distinguished reception and was shown great honour and granted high political offices. But this did not last long as the Shah, soon becoming suspicious, became tired of the increasing influence and growing popularity of his guest and Ujmal al-Din had to leave Persia under pretext of considerations of health. From there he went to Kazan where he again entered into important political negotiations and remained on the occasion of his visit to the Paris Exhibition of 1889 he met the Shah, who was then in Europe, at Munich and was induced by him to accompany him to Persia. During his second stay in Persia he experienced the fickleness of the Oriental ruler's favour in a still more marked fashion. At first he enjoyed the Shah's full favour and confidence, but the intrigues of the Grand Vizier Mirza 'Ali Akbar Khan, Amir al-Saltan, who had a grudge against Ujmal al-Din and felt he had a rival in the learned and popular

at 219; Ernest Renan, *L'Islamisme et la Science*, a lecture delivered in the Sorbonne on the 29th March 1883. A criticism of this lecture "by the Afghan Scholar *Hyamali*," *Kiddin* and Ernest Renan's *Reply* (Lund, Vertheim, 1883). Two lectures by Djamali al-Din (on education and citizenship) are given in *1888* Arabic periodical *Star* (Aleppo, 1296 3th Jumada 1); two essays on absolute governments (*al-Hakimiyyat al-Istislahiyya*) in *Al-Munir*, Vol. III. Much material for his biography is also contained in the accounts in periodicals of meetings and conversations with Djamali al-Din, of descriptions of him in German as well particularly mention the articles in the *Preiner Tagesblatt* of the 23rd June 1896 (concerning Africa) and in the *Beilage zur Allgemeinen Zeitung* (Munich, 24th June 1896) from which some of the above quotations are taken. (L. GÖTTSCHEW.)

DJAMALI, ALI al-DIN 'ALI b. ASHRAF, a native of Carmanara, a famous Mufti and Sheikh al-Islam in the reign of Haydar II, Selim I. and Sulaiman I. 909—932 (1503—1545). He studied in Constantinople. He was then appointed Mudarris in the 'Alliyeh Madrasah at Kütahya. But when his salary was reduced by Muhammad II, he resigned his office and did not take another till the reign of Bayazid when he became Mudarris in various towns in Asia Minor, Armenia, Syria, &c. In 907 (1501) he set out on the pilgrimage to Mecca, on account of the troubles then rife in the holy city had to content himself with a year's stay in Egypt. On his return he was appointed to the Madrasah recently erected by Bayazid and appointed Sheikh al-Islam. As such he delivered the *fatwa*, which was in justice Selim I.'s declaration of war against Egypt. As it was his custom to hang out of the window a basket into which people, who wanted a *fatwa* from him, could put their query, he was humorously called *Zabih* (Basket-hanger). A collection of his *fatwas* exists in a manuscript in Cairo. Djamali died in 932 (1525).

DJAMALI, a title in Sumatra (q. v.).
DJAMDAR, (a contraction of *Jum'ah-dar*, keeper of the wardrobe, see Nozy, *Supplément*, wrongly written *Jum'adar* in Voller's lexicon), denoted a body of slaves of the Sultan's eunuchs, who were perhaps employed in personal service at the court. They were divided into seven *unqas* (*unqas*) (see Khalil al-Zahid, *Zuhd*, 1884, p. 116). Djamdār is also the title of one of the highest ranks in the army in Hindustan, Hindustani and Malay.

(M. SCHMIDT.)
DJAMI, MAWLANA NŪR al-DIN 'AMR al-DĪN, a Persian poet, usually described as the last of the classic poets of Persia, was born at Kharand in the district of DĪm in the province of Herat on the 23rd Sh'aban 817 (7 November 1414) and died at Herat on the 19th Muharram 898 (9th November 1492). His family belonged to Dabab, a district in the province of Ispahan; his father Nizam al-Din Ahmad b. Shams al-Din

Muhammad had moved from this neighbourhood to that of Herat. On this account the poet, before he adopted the *shikasta* Djamī, used for a period in his youth that of Naṣībī. In the course of his studies, he was seized with an uncontrollable passion for mysticism and chose as his spiritual guide, Sa'id al-Din Muhammad al-Kashghari, pupil and successor of the great saint Ushā al-Din Naqshband. Towards the end of his life he went quite mad and became dumb (1491-92, p. 465, l. 13 et seq.).

The volume of his work is considerable and varied. He took up a theme of the court poets, already powerfully handled by Farid, *Farḥ* = *Zubir* (ed. with German trans., by Rosenzweig, Vienna 1824; English translation by Griffith, London 1881, and Rogers 1889; numerous Oriental editions); it is a product of his old age (he was seventy when he wrote it) and was dedicated to Sultan Husayn Mirza, ruler of Khorasan. This poem has been included with six others (*Silsilat al-Shakhs*, 1882 = *Abjad*, *Tuhfat al-Ahrar*, *Sabhat al-Ahrar*, *Laila u Majnun*, *Kāshid-nāma*, *Sikandar*), in the collection known as the *Haft-Awrang* (more correctly *haft-awrang*) "The Seven Stars of the Great Bear", when these poems, exclusive of the two, are published together, the collection thus formed is called the *Panji-gani* "the Five Treasures". In the field of lyric poetry, he left three *divans*: *Diwān al-Jamāl*, "Beginning of Youth" (884 = 1479), *Diwān al-Aḥd* "Central part of the Chain" (894 = 1489) and *Diwān al-Hayāt* "Course of Life" (896 = 1491), which, like the others, he seems to have published at an advanced age. Finally he wrote in prose the *Haṣarika*, an imitation of Sa'di's *Gulistan* and the *Naṣāḥat al-Din* "Epistles of Instruction" biographies of Sūfīs, (883 et 1479). His *Kashfāt*, or complete works, were lithographed in Lucknow 1876.

Philologie*, II, 231—233, 305—307; Silv. du Sacy, *Notice et Recueil*, vii 287 et seq.; V. von Kossowicz, *Biographische Notizen* (Vienna, 1840); V. Rosen, *Lebelsagen des Amir Perwan* (*Institut des Langues Orientales*) (St. Petersburg, 1886), p. 215—261. (L. HAART.)

al-DJAMI (A.) the "Collector", the "Combiner" one of the names of God in the sense suggested in 1882 II. 7 and IV. 159. — *al-Djami* properly *al-Musjid al-Djami*, the chief mosque of a town in which the Friday services are held. Cf. the article *al-Masjid*.

DJAMID (A.). A technical term in Arabic grammar. *Djamid*, literally "congealed" (thence "inorganic") is applied to nouns as well as verbs by an *im* *djamid* or under a *u* *u*, which (as neither derived (*muḍarrif*) from an abstract verbal noun (*maḥḥar*) nor is actually one", i. e. "a concrete verbal substantive" (Fleischer, *Kleinere Schriften*, I. 167, iii. 540 et seq.) Examples: *ḥayāt*, a man, *ḥayāt*, a duck (Wright, *Arabic Grammar*, 3rd ed., I. 100). Arab grammarians are not all agreed as to the position of the infinitive (*masdar*) in this respect, cf. Fleischer, op. cit., I. 167 and Muhammad 'Alī, *Dictionary of Technical Terms*, I. 196. — *al-Djamid* is a verb which is only found in the perfect, like *ḥayy*, *uḥy*, etc. (A. SCHAEFER.)

DJAMIL. *Abū Ḥasan* is Ḥasan, with the *ḥunayn* Abū 'Amr, a famous Arab poet, who lived in the first century of the Hijra. We know very little about his life. This is partly due to the fact that he had no permanent abode but was wandering life along with his tribe the Banu 'Udhra which had a reputation for depth of feeling. His love affair with Ḥadisa in Ḥadhra, a member of the tribe, who for a period at least — lived in Wādī Ḥ-Kharī, is famous. He wooed her as a young man but was rejected by her father. Nevertheless he still kept up secret relations with Ḥadisa even after she had married a cousin Sulayh Ḥadhra's male relative, the Banu Ḥ-Kharī, then invited the prefect of Wādī Ḥ-Kharī (according to another version of al-Balāḥa) against him, and Ḥadisa had to flee. After many wanderings he is said to have died in Egypt in 83 (204) whence he had gone after the murder of the poet of the day, al-Wake'ī, in the governor of the province. 'Abū al-Ḥār Ḥ. Marwan Ḥadhra survived him.

Ḥadisa is further distinguished as a poetess. A poem by him in honour of the tribe of al-Balāḥa to which his mother belonged is said, for example, to have earned him a rich reward. On the other hand his imitations were much despised. His long feud with the Banu Ḥ-Kharī is particularly celebrated, but it is particularly as a writer of love-poems (*ḥudūd*) that he lives in the memory of posterity and Ḥamil's verses (all to Ḥadisa) are really among the most beautiful and tender that have survived to us from the older period of Arabic poetry, when it was still untroubled by the intrusion of the *ḥudūd* which only by Ḥamir Ḥ. Abū Ḥarī's among his contemporaries. It is quite credible that Arab authors are right when they insist, in discussing Ḥamil, that his ruses and pretensions of love were the expression of his personal feelings. They are remarkable for their simple unaffected language and this is probably — next to their authentic value — the reason why they have been set to music and sung by so many Arab singers.

We may further mention that Ḥamil, in addition to writing himself, also handed down the poems of Ḥadisa Ḥ. Ḥadhra; his own reciter (poet) was the poet Ḥadhra Ḥ. v.

Biographical: *Adab* (10 ed.), i. 58; 37—110; vii. 40; ix. 112; the *Kawthar*, *Adab* (ed. de Goeje), p. 260—268; the *Khawthar* (ed. Wüstenfeld), No. 141 (transl. by de Slane, i. 331—337); Brockelmann, *Gesch. d. arab. Litt.*, i. 48; specimens of his poetry also given in Noldeke, *Arabia*, p. 2—13, 34. (A. S. LEAHMAN.)

DJAMILA, a celebrated Arab singer, who lived in the time of the early Umayyads. She was a client of the Banu Sulaym, married a client of the Banu Ḥ-Kharī Ḥ. al-Kharī, and lived with him in al-Balāḥa near Madīna. She is said to have learned music and singing in her youth from the singer Sa'ib Ḥadhra, by listening to him without his knowledge. It is of chronological importance to point out that this Sa'ib Ḥadhra, another of whose poems was the famous *ḥudūd* 'Azz al-Milla' [i. v. p. 542] met his death in the battle of the Harir in the year 63 (682-683) (*Adab*, vi. 188). Numerous singers, both men and women, trained in Ḥadisa's school — she was a most celebrated teacher. The best

known are: Marwan, the 'Aḥsa Ḥadhra, Sa'ad, etc. She is said to have been a friend of Ḥadisa, the beloved of Ḥamil [i. v.]. Many celebrated poets such as Ḥamir Ḥ. Abū Ḥarī, al-Kharī, etc., were also on intimate terms with her. A pilgrimage to Mecca, which she undertook, it is said to believe a very unreliable story, was of the nature of a triumphal procession.

Diagrams: *Adab* (10 ed.), vi. 124—128; *Adab* (ed. Knechtel), p. 16 of 119, of the introduction. (S. LEAHMAN.)

AL-DJAMRA, originally a pile of stones in the valley of Mīna which have been formed by the stones thrown by the pilgrims returning from the festival at 'Arafat. There are three heaps which are known from one another: *al-Jamra al-Kubrā* (the great one) the east near the Mosque of al-Khalīf, *al-Jamra al-Mawḥi* in the center and *al-Jamra al-Saghrā* at the western end of the valley. The first two are bounded by thick stone pillars and the third by a wall. *al-Jamra al-Kubrā* is also used for al-Jamra but it is also the name of a place between Mecca and Mīna. On the third or western heap, pilgrims throw seven stones ceremonially before the sacrifice on the 10th Muḥarrar; after visiting Mecca they again return to Mīna and on each of the three following days at least throw seven stones on each of the three heaps. As each stone is thrown, they say: 'In the name of God; God is great.' The pilgrims ought to provide themselves with stones beforehand but, according to Buckhardt's account, they do not trouble to do this and take the stones thrown by others. Among the sixth parts of the Hajj period, the ceremony of stone-throwing was a favorite *ḥadīth*, as women when performing it, lifted their veils a little (e.g. *Adab al-Jamra*, vi. 30, *Wajih*, i. 427; *Muḥarrar*, *Kawthar*, ed. Wright, 186, iii. of 370, 6 of 189).

This peculiar custom, which is not directly mentioned in the *Koran*, but is mentioned in the trip-places of Muhammad and in the *Ḥadīth* (e.g. the *Ḥikmah*, 920; *Wajih*, *Wajih*, p. 117, 118 of 189, the *Ḥadīth*, ii. 1, p. 123, vol. 124 of 189) was taken over by Islam from paganism. In Arabian times, there were, according to the *Hijab*, 534, 2 (where one should read *ḥadīth* with *Wajih*), *ḥadīth* stones near the heaps of stones; cf. also the stones which were worshipped at al-Mahgrāb in a poem by al-Farāḍī (ed. Bonabar, 30). As to the meaning of the ceremony, Brockelmann's observation, that the Muslims wish thereby to protect themselves from the Devil, is certainly correct in so far as the stone-throwing was originally here as elsewhere a rite of exorcism.

But what was to become accepted thereby is not clear. Van Vloten suggested the spiritism of the place, thinking of the story in the *Hijab*, 300. That is on the other hand, following his view that the Hajj is originally an ancient festival, seen in the being who is cursed and punished the sun, which was occasionally called al-Jamra by the Arabs (Gieseler, *Abendlandes*, i. Arab. *Relig.*, i. 123). The question of course can only be settled in connection with a discussion of the whole *Hajj* (see this article). The fact that of the principal festival stones are cast only on the 'Arafa heap, while it is not till the final exorcisms that they are cast on the other two,

expressed in several places, which belong to the first period of his preaching: e.g. (Abū. 10. 1) "this is the description of the paradise that has been promised on the rivers; rivers whose water never becomes tainted, and rivers of milk whose taste changes not; and rivers of wine the delight of those that drink of them; and rivers of pure honey, all kinds of fruits and gardens for ever". (iv. 24) "The elect shall repose on couches the coverings of which shall be of luscious . . . there are young virgins with modest looks who have never been followed by man nor spirit" (Abū. 10. 24) "They shall repose on couches adorned with gold and precious stones, sitting opposite to one another shateen. Youthful virgins shall go round about them to attend them with goblets and beakers and cups of flowing blue, and with fruits which they shall choose to their taste and the flesh of those birds they most desire". (Abū. 10. 25) "They shall abide among lotus trees without thorns and of many kinds with red from top to bottom, under a shade which casts its shadow far, over a flowing water . . . they shall repose on lofty beds" (Abū. 10. 26). "We have created the women of paradise, the houris, by a special creation, we have preserved their virginity". — (iv. 25); these houris "are excluded in position".

All these descriptions are quite clearly dream pictures; they are probably inspired by the vision of Isma'il, Muhammad at his unknown teachers must have seen Christian paintings of gardens representing the gardens of Paradise and have interpreted the figures of angels as being those of young men or young women.

In Sūrah 17, a story which is composed in the very unusual form of a bygone with a refrain, Muhammad speaks of two gardens given to the elect, each of them filled with shady trees, watered by flowing streams and containing two kinds of fruit. In the 17th sūrah, verses 48—49, he also mentions two rivers, two white and two black. This dualism, except perhaps the two ones, is not at all easy to explain; it might almost be said that the Prophet used the dual terminology because it was more pleasing to the ear.

To sum up then, his paradise is essentially a garden in which there are beautiful women, similes covered with rich brocades, flowing cups and luscious fruits.

In a later period Paradise was represented as a pyramid or cone of eight stories; it was given one story more than Hell so it was believed the elect would be greater in number than the damned. The different stories are built of materials of increasing value and each has a gate. At the top grows the laurel-tree at the boundary, mentioned in Kor. 20, 111, 12, whose branches shade the whole pyramid. The books in which are written the deeds of men are kept to Paradise along with a prototype of the Koran; this is what Muhammad calls the "pearl-rose leaf" (x. 26), the "pearl leaf" (Kor. 20. 12) or the "mother of the Book" (xiii. 1). Beside it is the *Alif* or tree-pear which writes on the tablets: we also find a prototype of the *Kāfir* in Paradise, called the "perpetrated lie" and object which are to be used at the last judgment like the balance for weighing the deeds of men, says the prophet; and standards. The standard of the prophet Muhammad, or rather its heavenly prototype, is planted in a

mountain called the mountain of glory which rises in the rank of the pyramid of Paradise.

Agreeing with all its contents, is placed above the astronomical heaven in which the planets revolve and rests on a number of "seas" having astronomical names: "the sea of hidden sciences, the sea of justice, the sea of the End". Above the pyramid is the world of dominion (*malakūt*) and power (*ghibārūt*), the Throne and the Tablet of Fate.

Orthodox Muslim theology, when it takes representatives as *Shaykh* and *Ash'arī*, has admitted natural phenomena into Paradise, though pointing out that they will only begin after the Resurrection. The pleasures of imagination and of imagination are also admitted. According to al-Ghazālī, an object of delight imagined by the elect will be real and at once although not quite in an objective manner, it has a separate light and the other sense. "Within the blessed shall live in a perpetual hallucination. Paradise will be like a great market in which images will be bought. The pleasures of imagination shall accompany those of the senses, they shall conduct in the way of knowledge, of possession of dominion, and in the contemplation of the glory of the righteous. But the greatest happiness in the elect will be the sight of God.

The beautiful vision of sight of God is allowed by orthodox Muslim theology; *Shaykh* says that God will be seen without being and without form. This belief does not seem to be in harmony with the Koran; for in the Koran God is almost always veiled. He calls upon Adam but does not reveal himself. Noah does not see him; Abraham "his friend" only sees his angels, Moses asks to see God upon the mountain, finally has he seen him than he falls into a swoon and on coming to himself is filled with repentance. Muhammad himself does not see him; he only sees Gabriel; in the Koran referred to in Kor. 20. 111, 12, he does not even see the face of the angel; "the late", he says, "was all veiled". According to a tradition given in the *Al-Bihar* (ii. 147) the prophet asked the archangel Gabriel "What thou ever sawest the Lord?" The archangel was troubled and replied "O Muhammad, between Him and me there are seventy thousand veils of light; if I approached a single one of these veils, I should be consumed."

God does not appear in the Koranic description of Paradise. He is however present at the last judgment which is described in the Koran in a fashion quite similar to that of Christian tradition and imagery.

The words *Quana*, *fructus* and *idea* are also employed to designate the earthly Paradise (see above).

For a plan of Paradise see the *Shifā'at Nāmah*; the pictures in this *Shifā'at* are copied in Cornu de Vaux's *Fragments d'Archéologie Musulmane* (Bruxelles) Brussels, 1895.

(II. CAUSE OF VAUX.)

DJANNABA (also **DJANNABA**, **DJANNABA**) a town in Persia. In the middle ages it belonged to the province of Arrajan and played a not inconsiderable part as one of the more important harbours of the Persian Gulf. It did not lie directly on the coast but (in N. lat. 29° 30'; E. Long. 50° 40' Greenwich) about 2½ miles from it at the top of a bay (northwest of the island of *Khark*),

which connects it with the open sea. Djannaba used to be a flourishing industrial centre; the cloths manufactured there were particularly prized and formed one of the principal exports. The town is now in ruins; near it is a village, whose name *Ljennaba* probably represents the ancient appellation of the town correctly reproduced by the English ear.

AL-DJANNABĪ, Abū Mūsāwī, Mūsāwī b. Iḥsān b. Sūnān b. Aḥmad al-Hiraṁī al-Ḥilā'ī, an Arab historian, born in Ḥirā in Persia, became *Kāfi* of Aleppo and *Kāfi* in 999-1000 after being deprived of his office. He wrote a history of the Muhammadan dynasty in six sixty chapters, which has survived in several manuscripts, entitled *al-Muḥim al-Ḥilā'ī fī Aḥwāl al-Arab wa al-Asakīr* which is usually called the *Tarikh al-Ḥilā'ī*. This work was translated into Turkish by the author himself, (c. Flügel, *Die ar., pers. und turk. Hds. der k. k. Hofbibliothek in Wien*, Vol. II, N. 333); he also made an epitome of it (*ibid.*, 334). Part II has been edited as: *Mustafāh al-Ḥilā'ī al-Muḥim al-Ḥilā'ī fī Aḥwāl al-Arab wa al-Asakīr* *Tur. Arab. Pers. Edition* = *J. V. Vop.* *Proleg.*, *Vienne* = *Austria* 1880.

Bibliography: Wüstenfeld, *Geschichte der Araber*, N. 338; Brockelmann, *Gesch. d. Ar. Lit.*, li. 300. (C. BRUCKMANN.)

AL-DJANNABĪ, Abū Sa'īd, an important Karmatian chief, began life as a carpenter-chief. Ḥamdan Karmat appointed him *Kāfi* (c. 895, subsidiary) for Southern Persia; he was at first very successful there by attracting the Persians at the expense of the Arabs; he established a socialistic system among his adherents, whose property was shared in common under his administration; but the Caliph's policy ruined this mission.

Ḥamdan Karmat then sent Abū Sa'īd to Bahāra; shortly before there had been an insurrection of the slaves in this province. The insurrection found a favourable soil, he made numerous converts and married the daughter of an individual of importance. We do not exactly know in what date Abū Sa'īd had been appointed *Kāfi*; but we find that in 286 (899) he had subjected a large part of Bahāra and taken *Kāfi*. In 287 his partisans were exceedingly numerous around Ḥaḍra the capital of Bahāra and approached Basra. The Caliph Mu'tasid sent an army of 1000 men against them, which was increased by a considerable number of volunteers. This army was sent in places by the Karmatian leaders; its general was taken prisoner, then sent at liberty; the other prisoners were massacred.

About 290 (903) Abū Sa'īd took the town of Ḥaḍra after a long siege by cutting off the water-supply; he then subjected *Yamama* and invaded 'Omda. At the height of his success he was as-

sassinated with several of his officers in his palace at Lahad (see above 4); in 301 (913) it is supposed that this murder was instigated by the Grand Master 'Uṭayd Allāh, who then proclaimed himself *Malik*, and who possibly had some reason to be afraid of Abū Sa'īd.

Abū Sa'īd was venerated after his death. His partisans believed that he would return, a house was always kept added at the door of his tomb. The Karmatians of Bahāra call themselves Abū Sa'īd's after him. He left seven sons of whom the youngest, Sulaymān Abū Ḥabīb, succeeded him after disposing of the chief.

3328, 3329, 3330, 3331, 3332, 3333, 3334, 3335, 3336, 3337, 3338, 3339, 3340, 3341, 3342, 3343, 3344, 3345, 3346, 3347, 3348, 3349, 3350, 3351, 3352, 3353, 3354, 3355, 3356, 3357, 3358, 3359, 3360, 3361, 3362, 3363, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3371, 3372, 3373, 3374, 3375, 3376, 3377, 3378, 3379, 3380, 3381, 3382, 3383, 3384, 3385, 3386, 3387, 3388, 3389, 3390, 3391, 3392, 3393, 3394, 3395, 3396, 3397, 3398, 3399, 3400, 3401, 3402, 3403, 3404, 3405, 3406, 3407, 3408, 3409, 3410, 3411, 3412, 3413, 3414, 3415, 3416, 3417, 3418, 3419, 3420, 3421, 3422, 3423, 3424, 3425, 3426, 3427, 3428, 3429, 3430, 3431, 3432, 3433, 3434, 3435, 3436, 3437, 3438, 3439, 3440, 3441, 3442, 3443, 3444, 3445, 3446, 3447, 3448, 3449, 3450, 3451, 3452, 3453, 3454, 3455, 3456, 3457, 3458, 3459, 3460, 3461, 3462, 3463, 3464, 3465, 3466, 3467, 3468, 3469, 3470, 3471, 3472, 3473, 3474, 3475, 3476, 3477, 3478, 3479, 3480, 3481, 3482, 3483, 3484, 3485, 3486, 3487, 3488, 3489, 3490, 3491, 3492, 3493, 3494, 3495, 3496, 3497, 3498, 3499, 3500, 3501, 3502, 3503, 3504, 3505, 3506, 3507, 3508, 3509, 3510, 3511, 3512, 3513, 3514, 3515, 3516, 3517, 3518, 3519, 3520, 3521, 3522, 3523, 3524, 3525, 3526, 3527, 3528, 3529, 3530, 3531, 3532, 3533, 3534, 3535, 3536, 3537, 3538, 3539, 3540, 3541, 3542, 3543, 3544, 3545, 3546, 3547, 3548, 3549, 3550, 3551, 3552, 3553, 3554, 3555, 3556, 3557, 3558, 3559, 3560, 3561, 3562, 3563, 3564, 3565, 3566, 3567, 3568, 3569, 3570, 3571, 3572, 3573, 3574, 3575, 3576, 3577, 3578, 3579, 3580, 3581, 3582, 3583, 3584, 3585, 3586, 3587, 3588, 3589, 3590, 3591, 3592, 3593, 3594, 3595, 3596, 3597, 3598, 3599, 3600, 3601, 3602, 3603, 3604, 3605, 3606, 3607, 3608, 3609, 3610, 3611, 3612, 3613, 3

Turkish government, it effectively took up the cause of Islam and became a newspaper with a world-wide circulation penetrating into the farthest corners of the east and receiving publications and correspondence from them. It reached its zenith at the end of the 70's and early 80's. A selection of the best articles is contained in the collection edited by al-Shihyāh himself entitled *Asma' al-Najdah fi Muntakhat al-Iqtisad*, Vol. I—III.

In addition to their organ in Beirut, which was mainly intended to keep the numerous official and unofficial foreigners in Beirut in touch with the ideas of the Turkish authorities in Syria, the latter instituted a second in Damascus, the Arabic-Turkish *Sūriya* called after the wilāyat in the capital of which it appeared. To the same class of government organs belongs the Arabic-Turkish *al-Furqān* which has appeared in Aleppo since 1866. The foundation of this paper is connected with the reorganisation of the Turkish administration at this period; at the end of the institution of wilāyets in 1867. It was then laid down and has ever been the rule, in principle at least, that the capital of each wilāyet should have a printing press and that its chief officials have a yearbook (*Salmisiya*) with the most important news from the administrative area and of a newspaper.

In 1869 the official French Arabic *Al-Naba' al-Ahmad* in Beirut came to be the only newspaper in the town on the publication of the purely Arabic *al-Naba'*, the weekly organ of the Jewish missionaries who had just then moved from Sidon to Beirut. About the middle of 1870 another began to appear, which, in opposition to *al-Naba'*, which represented French Catholic interests solely, endeavoured to awaken an enthusiasm for general culture, particularly an interest in the national life and literature. *al-Dhann*, likewise wholly in Arabic, appearing twice a week till Nov. 1867 of the 7th July 1886. The founder *Bayrūt al-Bashā' al-F* was equal to *Bayrūt al-Shihyāh* in business ability at least, but inferior in linguistic knowledge and readiness of pen. After the death of al-Bashā' on the 1st May 1884, the paper was continued by his son *Salīm al-Bashā'*. In addition to *al-Dhann*, al-Bashā' also published the smaller paper *al-Dhannat* (survived only three years) and the fortnightly *al-Layl* (appeared till 1884).

The Muslim of Beirut did not allow the laurels of the Jewish and of the "young Arab" press, which although not French Catholic, friendly to foreigners and nationalist was on the whole quite unenterprising, to rest unchallenged. In 1874 they founded the weekly paper *Zuhayr al-Furqān* renamed *al-Furqān al-Ahmad*, since the Turkish revolution, a paper which, besides giving the usual news very inadequately both in matter and form, formed a particularly dull example of the tedious phraseology of hypocritical and pedantic thoughtlessness. About 1874 a newspaper was founded, called *al-Zuhayr*, whose motto was wisdom, progress and unflinching warfare on all the backward elements in the country. The finest spirit of young Syria worked on it, such as *Iskandar al-Azār* and the highly gifted idealist *Adib Ismā'īl al-Bashā'*, in 1884 (on him cf. G. Zaidan, *Al-Naba' al-Ahmad*, in 15 of 1894, and *Khairat* in *Revue du Monde Mus.* 1894).

On the 18th October 1877 Khayr Sarkis, son-in-law of the above mentioned *Bayrūt al-Bashā'*, published the first number of the *Leban al-Furqān*. Although the new paper had similar aims to *al-Layl* and competed in some extent with it, Syria was large enough for both. Neither of them branched much in politics; they presented as far as possible an unbiased form, always with a careful regard for the views of the government. They were also quite neutral as regards religion. In the year 1880 a new party appeared; the Maronites founded the paper *al-Muqattil* to meet the attacks of the *Leban*. The *Al-Naba' al-Ahmad* and *al-Furqān al-Ahmad* took up the Protestant interest. The Greek Catholic Church founded *al-Naba'* as its official organ. A noteworthy enterprise was the political paper *Haqq* 1886 which appeared twice a week, which may be described as "independent, though opposing the government and Islam" and was regarded by the authorities as an antidote to the Muslim criticism of the *Zuhayr al-Furqān*, which was often a thorn in the side of the government. When on the 1st-12th March 1888 Beirut became the capital of an independent wilāyat a second paper of the same name was founded as the official organ of the provincial government, but distinguished from the other *Haqq* by the addition of *al-Naba'* in other Beirut newspapers and magazines so may also mention from the list in *al-Had* 1892 of *al-Layl* (1894), the following political papers: 1. *al-Naba'*; 2. *al-Furqān*; 3. *al-Dhann*; 4. *al-Naba'*; 5. *al-Naba'*; 6. *al-Naba'*; 7. *al-Naba'*. After the Turkish revolution there were 20 newspapers and periodicals appearing in Beirut: the following figures are given for 1912: 8 dailies, 12 weeklies and 12 magazines. Cf. *Revue du Monde Mus.*, xiv, 75 of 1913.

In addition to the Beirut papers and the official organs *Haqq* and *al-Furqān* (see above) the following Syrian political papers may be mentioned: 1. *Leban* 1861; 2. *al-Furqān* 1864; 3. *al-Naba'* 1865, all appearing weekly in Lebanon with several others, now (1912) 15 in all, according to the *Revue du Monde Mus.* (1912); 4. *al-Naba'*, a Damascus weekly; 5. *al-Naba'* 1869, a Tripoli weekly; 6. *al-Naba'*, a weekly in Aleppo 1877.

But the daily press in Syria had a struggle for existence. The population had long been used to chartered circumstances and not even its well-to-do number could be induced to guarantee sufficient support, while the government at once took rigorous proceedings to suppress the slightest free expression of opinion. The greatest number of Syrian journalists therefore went to Egypt. In 1876 the Lebanese *Salīm Yalīb* (cf. Zaidan, *op. cit.*, p. 94) founded the first Arabic daily paper in Alexandria *al-Naba'* i. e. *the Egyptian* in Arabic and lubricated its advance of French interests in the country. Another Syrian went afterwards founded a weekly: *al-Naba'* in Cairo. The enterprising fortnightly *al-Naba'*, which had been founded in Beirut in 1877 by three students of the American College, was also soon transferred to Cairo, where its editors founded the important daily *al-Masriyya*, which is an advocate of English interests. Egypt, where a more intelligent government laid little restriction on the press and under the English occupation a freedom reigned

which was only appreciably limited about 1890, now because the influx of the numerous young Syrians with literary talent to whom their native land did not offer the slightest prospect of a livelihood. We cannot go into the details of this migration of the press to Egypt here, but the reader may be referred to M. Hartmann, *The Arabic Press of Egypt*, London 1899 and above, p. 2019. The other people of the country were very slow in following the impulses given by the enterprising Syrians. It is true that the Copts had founded their bi-weekly *al-Naba* in 1878, which still appears, but this is a very insignificant sheet and none of its companion ~~papers~~ since issued are worthy of mention. Islam continued to hold aloof from the press. It was not till 1890 that a political daily with some pretensions to style appeared, *al-Muqbil*, admirably edited by the able *Shaykh* Ali Yusuf. A few fanatical rags came into existence alongside of it. The nationalist *al-Liwa*, founded by Mustafa Kamil, now called *al-Ahram* contains that organ which advances international Islam. A third important Cairo newspaper is *al-Quds*, which treats a middle course i.e. recognises the fact of English occupation.

The following figures are significant of the growth of the press in 1892 *al-Ahram* (cf. bibliography) mentions 40: in 1899, Hartmann (p. 415), 167 including those that had already ceased to exist; in 1909 there were 144 different newspapers and periodicals, 90 in Cairo and 45 in Alexandria *Revue du Monde Musul.*, xii, 308.

For the other provinces of the Turkish empire the populations of which are wholly or in part Arab, I only mention the oldest official newspapers (cf. Hunt in the *Journal Asiatique*, xl, 5, p. 174), viz. 1. *al-Bayra* for the wilayet of Bagdad; 2. *al-Sawra* for the wilayet of Baghdad; 3. *Sawra* for the wilayet of Yaman (*al-Yaman*); in Mecca a newspaper has appeared since 1908, *al-Hijaz*, cf. below under Turkey.

As in other respects also the Maghrib is the most backward as regards the press. Only since 1892 has there been a newspaper *al-Risala al-Farasi* in Tunis; in 1897 appeared *al-Hayat*; in 1899 *al-Sawra* also and since 1892 *al-Bayra*. In recent years however this number has been considerably increased. Cf. *Revue du Monde Musul.*, xl, 322 ff. Tunis is peculiar in the possession of two Jewish Arabic papers printed in Hebrew characters entitled: *al-Nasira* *al-Muqbil* *al-Muqbil* *al-Muqbil* *al-Muqbil* Both are written in a mixture of the vulgar and written language. In Tripoli the government has an official organ, *Tarbiyat al-Shura*. In addition to it Washington-Seray only mentions *al-Farabi*. In Algeria we have the following papers, *al-Muqbil* (Algiers) and *Tarbiyat* (Tunisia) and since 1905 the *al-Nasira* *al-Muqbil* *al-Muqbil* *al-Muqbil* *al-Muqbil* since 1908 Newspapers have only been published in Morocco at Tangier since 1905, cf. *Revue du Monde Musul.*, li, 5; vi, 619.

Much simpler a special position. Literary ~~and~~ printing-presses only came into the island with the English occupation. These Franks thought for a time that it would be possible to found a classical Arabic alongside of the peculiar dialect of the natives. This was the origin of the political paper *Muqbil* which is mentioned in *al-Hayat* for 1892. These classical Arabic experiments however proved fruitless, ~~and~~ a written language ~~was~~ developed which essentially represented

a dialect of one part of the island and was printed in Roman type. In this language *al-Nasira* *al-Muqbil* began to appear in 1879.

Even in lands which are not Arab there is a not inconsiderable production of Arabic papers. They may be divided into three classes: 1. those that further Islam; 2. those that defend Turkish rule; 3. those with other aims. The important newspaper *al-Muqbil* in Constantinople (see above) was previously devoted to the cause of Islam and the Turkish government. According to *al-Hayat* 1892 the following papers also were published there: 1. *al-Farabi*; 2. *al-Hayat*; 3. *al-Sawra*; 4. *al-Nasira*; 5. *al-Muqbil*; 6. scientific; 7. *al-Nasira*; 8. *al-Sawra* and a legal paper *al-Furqa* in Arabic and Turkish. Cyprus was the only other place in the Sultan's empire to possess a political Arabic newspaper: *al-Muqbil* (according to *al-Hayat*, 1892). The same authority, and following a Washington-Seray, p. 111, mentions only a single political paper in India, *al-Nasira* *al-Muqbil*, without giving further particulars, cf. below under India. There should be noted the attempt to create an organ for the Jews of India and Mesopotamia, which is made by a volume in an Arabic jargon in Hebrew characters entitled: *al-Nasira* *al-Muqbil* *al-Muqbil* *al-Muqbil* *al-Muqbil* "The Jewish Gazette (Hebrew)", in Calcutta, published by the Booksheds of Messrs. Asia, Benson & Co., and on Sunday serving their commercial ends, the paper circulated throughout the whole of British-ruled Judaea of Asia.

Only the following papers are mentioned by *al-Hayat* 1892 as appearing in the west: 1. *al-Muqbil*, in Italy; 2. to 8. to France, viz. 2. *al-Sawra*; 3. *al-Nasira*; 4. *al-Hayat*; 5. *al-Farabi*; 6. *al-Nasira*; 7. *al-Sawra*; 8. *al-Sawra*; 9. *al-Nasira* *al-Muqbil*; 10. to 12. in London, viz. 10. *al-Nasira* *al-Muqbil*; 11. *al-Nasira*; 12. *al-Nasira* *al-Muqbil* (edited by Rifa'at al-Haytham, on whom see my *Almanach*, p. 78 and 232); 13. *al-Nasira*, Tiflis, with the note "appears in Turkish, Persian and Arabic"; 14. *al-Nasira* *al-Muqbil*, London, with the note "appears in Arabic and English"; 15. *al-Nasira*, New-York; Washington-Seray mentions: 16. *al-Muqbil*, Mar-selle; 17. *al-Nasira* and 18. *al-Nasira*, both in Brazil. These lists may be increased from Hartmann, vol. 227 by the addition of *al-Nasira*, San Paulo (Brazil), *al-Hayat*, Philadelphia, and *al-Nasira*, New-York, and from Hartmann in *De. Litte.*, 1899, p. 58 ff. by 13 new papers, cf. also *Revue du Monde Musul.*, xii, 55 ff. p. 59.

A general idea of the language of the Arabic press may more readily and clearly be obtained from Washington-Seray. As first talking and laboured, often ~~was~~ in accord with the rules of grammar, it gradually drew to attain greater correctness and fluency. Constant close contact with European newspapers produced in many journalists an assimilation from the genius of the Arabic language and many idioms are at once be recognized as adapted from European phraseology. More educated men particularly Arab intellectuals (see above) early sought to combat such tendencies. At the present day writers in the more important papers endeavor to write pure Arabic. It is only in the comic papers that the spoken language is used by the press.

As regards content, the Arabic press has made

During the last 30 years, several attempts have been made to establish an English newspaper devoted exclusively to Muhammadan interests. It being recognised that while there were a number of excellent English journals founded and edited by Muslims, there was no first class English newspaper under Muhammadan control. The heavy cost of production and the comparatively small number of English-reading Muhammadans have hitherto stood in the way of the success of such an enterprise. The most important of these English journals now in existence are *The Panjab Observer* (Lahore), *The Muslim Chronicle* and *The Comrade* (Calcutta), and *The Muhammadan* (Madras).

The most important Persian journal published in India is *Kaif al-Millat* (weekly, 5000 copies, Calcutta). Several short-lived attempts have been made to start journals in Arabic, (generally, with a translation in Urdu), e.g. *Al-Nadwa* (Lucknow), but the support they receive is too meagre for such enterprises to be remunerative.

In addition to the newspapers, there are several other periodical publications, chiefly in Urdu, which are deserving of mention. The most noteworthy of these is *Tahdith al-Ashab*, founded by Sir Saiyid Ahmad Khan in 1870 and issued weekly until 1874, when the founding of the 'Aligarh College' absorbed his time and attention; five years later it was revived for the space of 2½ years; in 1881 a new series was started, which lasted for 5 years only. The *Tahdith al-Ashab* was the organ for the liberal school of Muslim theology, of which Sir Saiyid Ahmad Khan was the founder; the greater part of the articles were from his pen and aimed at expounding a purer form of Muslim doctrine, purged from the accretions of theologians and mystical views of his and those that were inconsistent with modern science. Among periodicals upholding the older orthodox view he mentioned *Isharat al-Sunnat*, (which was started especially to combat the views expressed in *Tahdith al-Ashab*), and *Nur al-Ahwal* and *Nur al-Akmal*, printed in Calcutta, and *Al-Falah*, printed in Amritsar. *Al-Nasr*, a monthly journal, with a circulation of 600 copies, is published in Lucknow, as the organ of the *Ittehad al-Ulema*, an association which aims at reviving modern learning on to the old traditional methods of study, without any violent breach with the past. All these religious periodicals are written in Urdu; the organ of the Ahmadiyah sect (p. r.), however, *The Review of Religions* (monthly, 800 copies, Calcutta), is in English.

In recent years, some Urdu magazines have been started, on the model of European magazines, dealing mainly with literary and other topics of a non-controversial character; from the very nature of their subject-matter they are not exclusively Muhammadan, but mention may be made of *Salat al-Ahram* (printed in Dilli), *Ar-Risala* (monthly, 4000 copies, Dilli) and *The Aligarh Monthly* (500 copies), as being especially concerned with matters of interest to Muhammadans. Two magazines for Muhammadan women are printed in Urdu, *Tahdith al-Ahram* (weekly, 240 copies, Lahore) and *Al-Jamia* (monthly, 450 copies, Aligarh).

V. THE MUSLIM PRESS IN INDIA AND SINGAPORE.

The newspapers etc. appearing in the Dutch East Indies are detailed in the *Agengengment* over *Nederlandsch Indië*.

Some notes are given in the *Annuaire de l'Inde* (Indochine), particularly vol. 435 et seq. Through the kindness of Prof. C. Dumont Dingeron we are enabled to give some further details of the Muhammadan press there. The *Al-Hind* (Friday), 'The Arena of Native Officials' is published daily in Bandung; its chief editor is Raden Mas Tirtahadimya. To some extent in opposition to this there has also been published in Bandung since 1912 a second daily, *Al-Musawwar* 'Young People' (to be understood in the same sense as one speaks of Young Turkey) edited by A. H. Wignja di Guntra. The *Darmakarya* which appears twice a week in Surakarta is edited by a Chinese. The *Pic* (Tues) with the assistance of a Japanese. The name is taken from the Sanskrit and means Good News. A classical name is likewise borne by the newspaper *Sarawati* (Good Arrow) published in Sabu, which is edited by the *Sarakat Islam* to oppose the propaganda of the *Budi Utomo* (see Noble Bodewont, cf. *Revue de l'Inde* *Indochine*, vol. 435 and elsewhere). The last edited paper next to the *Darmakarya* is the bi-weekly *Union Malaya* (The Malay Messenger) which has appeared in Padang since 1910 under the editorship of Dato Soetan Mahendja and Soetan Mohamad Salim. The *al-Muntaz* is also published in Padang.

At Singapore there appear from time to time Arabic newspapers with a more or less pronounced hostile attitude to European authorities. The *Revue de l'Inde* *Indochine*, li. 398 et seq. gave an account of the Malay monthly *al-Furqa*. The aims of the *Nurulfa*, the 'Balance', which first appeared in 1912, are similar. Other Malay papers are the *Union Malaya* (twice weekly) published by the Singapore Free Press (Walter de la Rive), *Pemany*, *Pengalaman* etc. Of the Arabic newspapers referred to above, we know of the following: *al-Bekah* (al-*ghita*) 1909 (weekly), *al-Musawwar* 1910 (fortnightly), *al-Musawwar*, 1910, (weekly).

VI. CHINA.

I have before me two productions of the Muslim press of China: a newspaper and a periodical. But I was assured by a Confucian Chinaman acquainted with these matters that this paper was certainly not the only one. The newspaper is the *Ching Tung Al-Nur* 'The Muhammadan Newspaper' 'The Muslim', published in Peking. It belongs to the *al-Nur* press or the 'Muslim press', which is distinguished by format as well as by contents from the larger papers. This paper, which only displays its Muhammadan character in a few features, is said to be very popular among the non-Muslims in Peking also; it is the only paper that appears in the *al-Nur* press; it is therefore understood by the lower classes when it is read out to them. The *Al-Nur* is a single sheet. Each side contains four pages the horizontal and vertical divisions between them being also closely filled with printed matter. We may deduce from the numbering that it has been appearing for 700 years. The number which I have before me of the 31st March 1912 contains a leading article amongst other items in addition to the news of the day, entitled 'a proposal to diminish the troubles in the Republic' by 'the Yung' as well as a political caricature.

Brookhall gives an account of the periodical in his *Islam in China* (London 1910), p. 283 with a facsimile of the cover of No. 1 (fig. 232).

283) and an index of the contents of the same number (p. 284). The cover bears at the top the Muhammadan title *Ṭarīq al-Islām*, "The Awakening of Islam", with the confession of faith below it. In the centre is the Chinese title *Hāng Hui Yü*, which is the equivalent of the Arabic below "No. 1"; 100; Organ of the Muhammadan Society for the advancement of education in Japan (according to Froomhall *op. cit.*, the publishers are thirty students; they are probably also the leading members of this society); on the right "not for sale". The contents are classed under three heads: 1. Articles which, as is clear from the content to 2, are composed by Chinese Muslims, living in Japan in Articles from home contributors. 3. Appendix with miscellaneous information.

The ten articles in section 1 are: 1. "The relation between religion and education" by Huang Chün-guang; 2. "The reform of religion" by Pan T'ien-hung; 3. "Education and the responsibility of the education of our countrymen", by the same author as 2; 4. "On the Muhammadans" by the same author as 1, 3. "The civilization of Islam" by the same author as 1; 5. "Islam and the Shi'ite" (The Japanese *Shinto*) by Wang T'ien-k'ih; 6. "The progress of religion" by Ma Tsung-ku; 7. "On the education of the women in Islam in China" by the same author as 6; 8. "The New Muhammadanism" by a *member* of the society. — The second group contains five articles: 1. Introductory address to the Japanese Society for the Advancement of Islam, by Tai Ta-yo; 2. A plan for the revival of Islam by Li Shun-shan; 3. On the *mission* of the Society, by Wang-chung; 4. An *address* on the educational project, by the same author as 3; 5. The characteristics of the society by Ma T'ien-hung. — The third group contains three anonymous notes: 1. The position of the society for the advancement of Islam in Eastern Asia. 2. 3. 4. Minutes, statutes and list of members of the Chinese Society for the advancement of Islam.

While the Christians in Turkey have no press in the language of the ruling race (exception see p. 1021), because their writers themselves are only in the initial stages of the higher developments of the intellectual life, the Muslims of China have accumulated themselves to the ancient culture of the Chinese and their press also will thus share the great advance which has been made by the newspapers press of the new China. It will render vast services to the country, if it continues to avoid the main danger that threatens Islam under foreign rule, namely the tendency to try to form a state within the state. (MARTIN HAATWANN.)

DJARIR = *Ḥajjir* a. *al-Khazari* of the clan of *Ḥamir Kulalib* b. *Yasbi*, a member of the *Muḥajir* *Ḥamir*, the greatest Arab ancestor of the *Ḥamir* *Ḥamir*, first became prominent as a poet in the reign of the Caliph *al-Ma'mun*. After he had proved his artistic powers no share of lesser magnitude, a dispute between his *Ḥamir* and the *Ḥamir* *Ḥamir* who were also of *Ḥamir*, brought him into hostile contact with these poets, champion *al-Farabi* (q. v.). The feud with *al-Farabi*, which was to dominate the whole of *Ḥamir*'s future career, appears to have begun in the year 64 (683-684). In *Ḥamir* where the battle was first waged, such stormy scenes arose that the authorities had to intervene — without any lasting effect, it must be acknowledged. The guardianship of *al-Farabi* in the *Ḥamir* proved an important factor in determining *Ḥamir*'s later career, for he introduced him to the court of the Caliph *al-Ma'mun*. *Ḥamir* for the favour of the ruler brought him into public conflict with the *Ḥamir* *al-Ahwal* (q. v., p. 334) and *Ḥamir* *al-Ahwal* (q. v., p. 337) of *Ḥamir* who had been unsuccessful in throwing his rivals into the shade, particularly in the reign of *al-Ma'mun* *Ḥamir* enjoyed the full favour of the Caliph under the name *Ḥamir* II, in which *Ḥamir* lies of religious tolerance and the modesty for which he was famous probably constituted their share. We find poems in his *Ḥamir* on the later Caliph *al-Ma'mun* II, and *Ḥamir* also, *Ḥamir* appears to have died in *Ḥamir* (in 110 = 728-729, or according to others 114 = 732-733) soon after his great rival *al-Farabi*.

In his poems *Ḥamir* appears as a thorough Beduin. In spite of his inherent lack of reverence for his father, his pride in his ancestors demanded the preservation of the honour of his house even at the expense of truth. He believed he was defending the honour of himself and his tribe in his 'lying'. Nevertheless *Ḥamir* did not live by his lampoons, as others did, but by his paragonism on those in authority. In addition to those *Ḥamir* of poetry, there were also beautiful lamentations during his poem.

His 'lying' with *al-Farabi* is to be found in the *Naḥḥ* published by *Ḥamir* (1905-1906), the lampoons which he exchanged with *al-Ahwal* are collected in the *Ḥamir* *Ḥamir*, No. 547 in *Constantinople*. His *Ḥamir* was printed in *Ḥamir* in 1313; numerous poems by him are also given in the *Ḥamir* *al-Ahwal*.

DJARIYA (A.) "girl", "female slave", cf. the article *AED* [p. 16 *et seq.*].

DJARR (A.), technical term of Arabic grammar of the Buḥārā school = possessive (Kāṣe *Al-ḥarf*); *Djarr* (properly the infinitive of *djarrā*, to pull, to draw) is still used by Sibawayhi as a synonym for *ḥāṣ* and denotes the vowel *i* in the last syllable of a word when it serves to express the genitive. How *djarr* came to have this meaning is not quite obvious (cf. the earlier *ḥāṣ* and *ḥāṣ*). It is for example explained that the later grammarians no longer understood the phonetic meaning of the expression and came to use *djarr* as well as its Kufic equivalent *ḥāṣ* as the regular words for "genitive", without regard to the letter of the ending, cf. for example *al-Jawāhid* in the *Adh-dhikr* (in *Ḥurūf*, *Cherchouh*, 1894, p. 140), where three distinguishing features of the *djarr* are given: the *ḥāṣ*, the *ḥāṣ* and the *ḥāṣ*.

According to *Lamā'at* and *Mafāḥ* and his commentator Ibn Ya'qūb, the *djarr* is one of the *ḥāṣ* *al-ḥarf* (characteristics of the vowel) as it is not found in the verb nor in the particles. Like the two other *ḥāṣ*, it is an *al-ḥarf* *al-ḥāṣ* word, a sign for something referred to, the expression of a so-called *ḥāṣ* [q. v.]. *Ḥāṣ* however only make the *djarr* necessary (i.e. in order to avoid a confusion of the preposition with the subject *ḥāṣ* or object *ḥāṣ*); it is produced by the *ḥāṣ* *al-ḥarf*, i.e. the preposition which happens to govern the *djarr*. Such a preposition is added even when a genitive is dependent on another substantive, because both substantives have equal power and one cannot govern the other, we would therefore have to look upon *ḥāṣ* *al-ḥarf* as an abbreviation of *ḥāṣ* *al-ḥarf* *al-ḥāṣ* *al-ḥarf*. *Ḥāṣ* *al-ḥarf* is an abbreviation from *ḥāṣ* *al-ḥarf* *al-ḥāṣ*. On the history of this conception cf. Fleischer, *Kleinere Schriften*, II, 89.

DJĀSĀK (DJĀSĀK or DJĀSĀK), an island in the Persian Gulf. It is only mentioned by Yāqūt and Ḥamwī among Arab geographers. From their statements it should most probably be identified with the island of Larak in the Strait S. E. of Bandar 'Abbās [q. v., p. 604], and not with the large island of Kish as is done by Le Strange. In the time of these two authors, DJĀSĀK belonged to the prince of Kūh (Kūh, the modern Kūh, a small island in 34° N. long. 50° E.); he kept a small body of men there as a garrison, who were distinguished for their skill at sea. At the present day the name DJĀSĀK is borne by a cape in 24° 40' N. lat. on the Gulf of 'Omān, near the entrance into the Persian Gulf, with a fishing-village of about 200 huts. This point, the strategic importance of which is not inconsiderable, is now in English possession (a warship and telegraph-station).

DJASSAWR. (See DJASSAK.)

DJĀT or **DJĀT**, the name of a tribe in N. W. India, of uncertain origin and of unclear character. Historically, they rose to prominence in the downfall of the Mughal empire in the eighteenth century, when their chiefs founded the Hindu states of Bharatpur and Bharatpur near Agra, while somewhat later they formed the military portion of the Sikh confederacy. In these states they are still the most valued members both of the agricultural community and of the native army; but in so far as they practice widow marriage, they rank below the Rajputs. In the W. and S. of the Punjab, as in Sind and even in Afghanistan, the name is given to Muslims, presumably converted from Hindus, who do not belong to any recognized Muslim tribe, and who are often regarded by occupation. The language called Djāt is only a local dialect. At the Census of 1901, the total number of Djāts was seven millions, mostly in the Punjab, of whom nearly 48% were Hindus, 30% Sikhs, and 22% Muslims.

Bibliography: Census of India, 1901, Vol. I, *Religious and Administrative*, W. Crooke, *Tribe of the N. W. P. and Affin.*, III, 23 sq. (J. S. CORRIE.)

DJĀTA, *Ḥarā*, a name given to the Mongols [q. v.].

AL-DJĀTHIYA (A.) "the kneeling (community)", a title of the *Ḥarā*.

DJĀWA, Arabic name of the island of Java [q. v.]. In the modern use of the term, this name also includes all the peoples of Malay race. Cf. *Struck, Ungewöhnliche*, II, 195 et seq.

AL-DJAWĀD AL-ISFAHĀNĪ, AND **DJĀTAN** *Moghammad*, Ali, with the honorary title *DJĀMĀL AL-DIN*, a Zengid Visitor, had received an excellent education from his father and at once received an office in the *Ḥarā* al-'Arḍ of the Sultan Salim al-Muḥammīd. He afterwards became one of Zangī's most trusted friends and was given by him the governorship of Naxīn and al-Rayḥā and the supervision of his whole kingdom. After the assassination of Zangī he narrowly escaped sharing his master's fate but succeeded in leading the troops to al-Mawṣil. *Ḥāṣ* al-Din *Ḥāṣ*, and *Ḥāṣ* Zangī, therefore confirmed him in his rank; during this period *DJĀMĀL* distinguished himself so much by his liberality, that he became universally known as *al-Djāwād* (the generous). He particularly won the praise of his co-religionists by the many useful and charitable institutions in the two holy cities, Mecca and Medina, which he founded at his own expense. He was nevertheless thrown into prison in al-Mawṣil in 334 (1165) by Kutb al-Din Mawṣil, who had succeeded his brother and died in 336 following year in prison. His body was afterwards brought to Mecca, carried round all the holy places, then taken to *Ḥāṣ* where it was buried. Among his pilgrims were *Ḥāṣ*-Bayā and 'Imād al-Din.

DJAWAD PASHA, Turkish general and author. Djawad Pasha to whom his father Mustafa Agha gave the name Ahmad Djawad, was born in 1267 (1851) at Damascus, educated in Druza and at the military academy of Constantinople. His military career brought him back to his native city of Damascus, and then to Serbia (1876); he particularly earned the gratitude of his country at the demarcation of the frontier with Serbia, Russia and Greece. In 1885 he was promoted to the general of a division and went to Crete, where he was afterwards appointed governor; he ultimately reached the rank of Major and became Grand Vizier in 1897. Two years later he resigned office, became commander-in-chief of the Fifth Army Corps in Damascus and died in 1313 (1900). In addition to other writings he composed a work on the history of Turkish warfare (*Tarikh al-Hayat al-Gharbiyya*) of which only the first volume, containing the history of the Janissaries, was printed (Stambul 1297-1299). A French translation was made by L. Bouchard (*Les militaires Ottomans, depuis la fondation de l'Empire jusqu'à nos jours*, I. *Le Corps des Janissaires, depuis sa création jusqu'à sa suppression*, Paris 1889).

AL-DJAWALIJI, AND MANGIR MAWIRI in Arabic. AL-MUHAMMAD AL-KHAYK, an Arab philologist of an old Baghdad family, pupil and successor of al-Whali (q. v.) in his chair of Philology at the Nizamiya, born 406 = 1073, died on the 15th Muharram 539 = 19th July 1144 at Baghdad. In addition to a short handbook of Syntax, a commentary on Ibn Khalifa's *Adab al-Kutub*, an extract from *Qawahir* Sa'di and a *Kitab al-Arabi al-Kamil* on *al-Furusiyya* (ed. Azzam, *Die zwei Hälften des B. des. und Sa'ad al-Hadith* in *München*, No. 103, 3; U. Derenhung, *Les monuments arabes de l'Égypte*, No. 270, 3) he wrote an explanation of the words of foreign origin in Arabic, entitled *Kutub al-Mawarid min al-Kutub al-Arabiyya al-Kamil* (ed. al-Kutub al-Arabiyya, ed. by F. Sachau Leipzig 1867); a lacuna has been filled up from the Cairo Ms. Spitta in *Zeitschr. d. Deutsch. Morg. Ges.*, xxi. 403 et seq. (marginal glosses by 'Abd Allah b. Hariri (died 582 = 1186) in a ms. of the Kaz. (Derenhung, *Op. cit.*, 772, 5). Finally he wrote a supplement to *Dirr al-Dhawir* entitled *Kutub al-Fahm* (I. *al-Fahm* fi al-Yahdun min al-Kutub al-Arabiyya al-Kamil), ed. H. Derenhung in *München*, *Forsch.*, Leipzig 1875, p. 107-166.

DJAWAN, the poetical name of Kārim 'Alī, a native of Dihli. He was sent to Calcutta from Lucknow by Colonel Scott in A. D. 1800, and obtained employment as a munsif at the College of Fort William. He there made a Hindustani translation, in A. D. 1215 (A. D. 1801) of the Sanskrit drama *Sakuntala* of Kālidāsa from a *Drajābhāsa* version by Nawāz Kāshīr, which was made by order of Mōiz Shāh, the son of Shāh 'Alī, one of the generals of the emperor Farrukhsiyar (who reigned A. D. 1715-1719). A portion of this Hindustani translation was first printed, in Devanagari characters, in 1803, in Dr. Gilchrist's "Hindustani Manual". It was next printed in Roman characters, (Calcutta, 1804) after which an edition of the *Shāh* in Hindustani, together with a translation by Dr. Gilchrist, was published, with a selection of fables, in London, 1806, under the title of "An Appendix to the English and Hindustani Dialogues". It also appeared (without the author's name) in Pilce's "Hindustani and Hindustani Selections", Calcutta, 1830. A lithographed edition was published at the Newal Kishor Press, Lucknow, in 1875.

Kārim 'Alī is also the author of a *Barahma*, or *Majma'ih* poem descriptive of each month of the year, which was printed at Calcutta in A. D. 1812. The date of his death is uncertain, but in the *Dr. Gilchrist's*, a *Tajma'ih* of Urdu prose written by Bānī Nāgari in A. D. 1227 (A. D. 1812) he is mentioned as being then still alive.

(J. F. BRUNNEN.)

AL-DJAWBARI, 'ABD AL-KAẒIM b. 'Uthman ZAYN AL-DIN AL-DIMASHQI, an Arab author, with a thorough scientific training, who led the life of a wandering scholar through all the lands of Islam even to India, going to Yemen in 613 = 1216, Kābul in 616 = 1219 and then to the court of al-Malik al-Mustafid of the house of Uthaybi, the ruler of Amal and Hama who had succeeded in power in 614 = 1218 and 619 = 1222. For the latter he wrote an account and explication of all the fruits and descriptions, he had become acquainted with on his travels among strange people, plants, minerals, and money changers, and this is a mine of information on the manners of the period. This *Kitāb al-Mawarid* (I. *Kitāb al-Mawarid* in *Kitāb al-Mawarid* was printed in Damascus in 1265, *München* in 12, Cairo 1316, 1318, and, (ca. 1908) together with his *Kitāb al-Fahm* p. 1-100 in *al-Fahm* von Bānī Nāgari in *al-Fahm* in *al-Fahm*).

(C. BROCKELMANN.)

AL-DJAWF (al-Jawf), a district in South Arabia between Najran and al-Hudaydah. According to the information obtained by Niebuhr during his stay in Yemen, it is for the most part,

composite like substance (*ḡawhar*), that is the indivisible component (*atom*).¹ Talasani points out that there is an advantage from the apologetic point of view in admitting the doctrine of atomism for it can be used to refute the thesis of those philosophers who say the world is composed of primal matter and of form, a thesis which leads to that of the eternity of the world and the denial of the ~~succession~~ Matter must be eternal for, according to this system, all that is produced is produced ~~in a manner~~ that precedes it; and as the eternity of matter implies that of form, from which it ~~cannot~~ be separated, the eternity of body results. The philosophers further admit that circular movement, which is that of the heavenly bodies, is eternal while rectilinear movement cannot be ~~so~~ but when it is admitted that all bodies, including the celestial spheres, are composed of atoms, circular movements are ~~not~~ of small rectilinear displacements of atoms, which are not eternal.

Muslim theology does not apply the name "atomism" (*ḡawhar*) to God; the atomic theologians do not do so, since for them this word is specially used to designate the atom, which is in space and forms part of bodies. The philosophers in the strict sense of the word, when they speak of what does not exist in another thing already posited, or of what exists logically by itself, speak of a "quiddity", of a certain well defined accident, which is independent of its existence; this accident may exist or not exist; in other words the substances of things are contingent quiddities. This is the case with God in whose existence is identical with being.

According to Ash'ari, the substances of things are created by God from ~~nothing~~ to last and are from their very nature do not endure; if God ceased to maintain them ~~in~~ an instant, they would be annihilated together with their accidents.

Bibliography: Djawharī, *Tarīkh* (Cairo, 1283, A. H., ed. Fliegel, Leipzig, 1845); Nessel, *Aḡḡid*, with Talasani's commentary (Constantinople, 1313 A. H., pages 47, 52, 70. (B. Cairo V. 100.)

DJAWHAR, whose full name was Abū 'I-Jawāḥir (Husain) *Djawhar* b. 'Aḡḡib, called al-Kātib, a Fatimid general. He was born in Byzantine territory whence his name "al-Kātib" and was brought as a slave to Kairawān. After passing through the hands of several ~~masters~~ he was finally presented by the eunuch Khalīf to the Caliph al-Mansūr in this town, who made him his personal attendant. After receiving his freedom from his son and successor al-Mu'izz, he went first secretary to the rank of a vizier and commander-in-chief of the army, and in this latter office distinguished himself in one of the great ~~of~~ of Fatimid generals. His first great feat of arms was the campaign in 347 (958) to the Maghrib; he succeeded in taking prisoner the ruler of Sijilmassa, Muhammad b. Waḡal, who had declared himself "Commander of the Faithful", and struck him to his own camp; Waḡal was taken and the whole was as far as Tangier and Ceuta soon subdued. Jawhar's second campaign which took place about nine years later was equally brilliant. It was now at last possible to realize the long cherished designs of the Fatimids on Egypt, which had been breaking up since the death of Rafīf. On the 14th Buḥār 1. 338 = 5th February 969 Jawhar left Nishāda with 100,000 men.

Near Alexandria he was met by an embassy from Egypt which offered him the submission of the country. Although he gave the mission a friendly welcome, on its return the war-party gained the upper hand with the result that a battle was fought on the 11th Buḥār (30th June) at Iḡḡa. Jawhar had little difficulty in breaking down the resistance of the enemy and on the 17th Buḥār victoriously entered the capital. He at once proceeded to lay out a new quarter of the city, the modern Cairo (cf. the articles *ANAKA*, p. 532 et seq. and *CAIRO*, p. 813 et seq.). — He initiated the conquest of Syria to *Djawhar* b. Falāḡ, who occupied Hamaḡ in 359 = 970-971. By 360 = 971 however ~~the~~ latter had to retire before the *Karmathians* under Husayn al-'Aḡḡi; the reinforcements sent by Jawhar to Syria were hemmed in at Jaffa and soon the enemy was before Cairo itself. Jawhar tried, not without success, to enter into negotiations with some of the hostile leaders, and after an indecisive battle had just been fought, won a complete victory on the 3rd Buḥār 1. 361 = 24th December 971 before the gates of the city. Jaffa was now relieved but when soon afterwards the *Karmathians* began to prepare for another advance, Jawhar urgently requested the Caliph to come to Egypt in person. He arrived in Ramadān 362 (June 973) and from that hour the hitherto all-powerful Jawhar began to recede into the background; in 364 = 974 he was even deprived of all his honours. It looks as if the Caliph thought the great popularity of his general dangerous. It was only after the death of Mu'izz (366 = 976), in the reign of his successor al-Aziz (q. v., p. 540) that he regained his former rank. This Caliph in 976 sent him against the Turk Aḡḡib, who had shortly before installed himself as ruler at Baḡḡasa. In Buḥār 1. 365 = July 976, Jawhar began the siege of the city but when Husayn al-'Aḡḡi hurried to its assistance, had to retire and in his turn was shut up to Assiut by the allies. He finally succeeded in gaining from Aḡḡib a guarantee of a safe retreat, whereupon he went to the Caliph in Egypt, who now undertook the direction of the operations in person. Jawhar commanded the advance-guard in the successful campaign against Aḡḡib which followed, but we hear no more of his military activities. He appears to have passed the remainder of his life in comparative retirement, winning the esteem of the people by his liberality, and died on the 20th Buḥār 1. 361 = 28th January 992 at an advanced age.

(P. B. B. B.)

DJAWNUPÛR is a district and city lying on the Ghumti river to the North West of Benares in the United Provinces of India, between 25.24-26.12 degrees North and 82.7-83.5 degrees East. The population amounts to a million and a quarter, of which Muhammadans form 90%. After Shîb al-Sharî defeated the Rajpûr King of Kanauj, the Muhammadans passed through Djawnupûr to the east of Benares. Shîb al-Sharî Taghlab made his Governor of the country in 1301 A. D., and 38 years later the Emperor Hûsh Shâh Taghlab founded the modern city. Thirty five years later again Shwâhid al-Dîn, the Mughal Governor, proclaimed himself Shâh al-Sharî, and his successors ruled in Djawnupûr for nearly a century. The principal of these were Mahadî Shâh, Ibrahim Shâh (1400-1440), Mahmûd Shâh (1440-1459) and Husain Shâh (1460-1476), who were engaged from time to time in struggles with the central power at Dîlî, and the rulers of Malwa, and made successful raids into Bundelkhand and Orîssâ. The Emperor Humâyûn took possession of the place after the capture of Agra by Hûsh, and it was subsequently held by Shîb in 1559 A. D. After the conquest of Agra, it was returned to the Mughal Empire and it later decayed when Alîshâh became the chief of provincial government. It afterwards came into the possession of the Nawab of Oudh and passed to the British in 1773 A. D. Among the striking architectural features of Djawnupûr are the stone bridge over the Ghumti built by Mahadî Shâh, Governor of the Kingdom Akbar, in 1564 A. D., the Arab and Muhammadan mosques built by Ibrahim Shâh and the Banîs, mosque built by two of his nobles, the Jai Dargah mosque built by the Queen of Mahmûd Shâh, and the Mughal Masjid built between the years 1438 and 1478. At the side of the last is an enclosure of royal graves. The special characteristics of **Q** Shâhî style, derived from the Persian style at Dîlî, are the high platforms on which the buildings stand, the two-storied colonnade cloisters which flank the great central court, and the lofty propylon-like gates on the east side, topped in front of a domed porch, and relieved by panels, cornices and other decorative work.

DJAWZAHAR, in the astronomy of the Arabs and Persians means without exception *supra*, the orbit of the moon, or in more exact the circle concentric with the ecliptic, in which the centre of gravity of the lunar sphere moves; with another it means the lunar nodes, i. e. the points at which the orbit of the moon equates that of the sun (ecliptic) and the circle from which the moon begins its course north of the ecliptic. It is called *Ans al-Dhawhar* = the Dragon's Head, the name from which the moon begins its course south of the ecliptic. *al-Dhawhar* = the Dragon's Tail; the two together are called *Dhawhar*. *Djawzahar* is the standard term of the Persian and *Gawhar*, of uncertain etymology; I shall only mention two derivations: According to Spiegel and Nöldeke *Gawhar* is probably from the *Arab* *Gawhar* = (containing) the seed of the bull, which in the *Arab* is a name of the moon; the *Persian* of *Traktat* *Ans* and the *Arabic* *al-Dhawhar* say that *Djawzahar* is an abstract form of the Persian *Gawhar*, i. e. form or shape of a knot (literally of a knot or net). For further information the reader may be referred to the bibliography. In some Arabic astronomers the term *al-Dhawhar* is also found as the two nodes or also as the *orbis* and *al-Dhawhar* = head and tail of the snake or of the dragon.

DJAZÏRA (plural *dhawâzir*) = "island", "peninsula" - *Al-Dhawâzir al-Kharrâ*, a town in Spain, see *Arabs*, p. 277. - *Al-Dhawâzir*, *al-Aghâr* (q. v. p. 256).

Dhawâzir *al-Dhawâzir*, also known as *al-Dhawâzir*, is the name given by the Arab geographers to the northern part of the land between the Euphrates and the Tigris, beginning, according to Abu 'Alî (ed. Hammad, p. 273) at Malatya and ending in the north and bounded in the south from the Tigris by lines from Akko to Tadmûr, Cf. G. L. Strange, *Land of the Euphrates* (Cambridge 1915), p. 24, 249, 250-254.

DJAZÏRAT B. OMAR now usually briefly called *Jazira*, "island", a town on the right (west) bank of the central course of the Tigris, situated in 32° 22' N. long. (Greenwich) and 37° 20' N. lat. at a height of 1200 feet above sea level. According to the Arab geographers it used to be in a bend in the Tigris the extent of which was caused by an artificial channel. If we take this literally, the upper mentioned bend is the artificial arm and the Tigris once flowed around the town on the west in the bend which is now almost dry in the normal condition of the river.

Even in ancient times there was a passage over the Tigris at *Djawzât B. Omar*, at the for-

town of Basabde, the exact site of which has been located by M. Hartmann (*Nahrain*, p. 93 et seq.) from Sachau's description of the district, south of the modern town west of the ruins of the ancient Tigra bridge, while the site of the district of Zababde — whether east or west of the river (the issue of the former it might be pointed out that the Chaldean diocese of Hatre lies to the east) — is still debated. The traditional equation of Basabde with Sampha should be rejected as quite untenable. On this point cf. Noldeke in *Beiträge zur alten Geschichte* (*Festschrift für Kiepert*, p. 76 et seq.; *Kepler*, *La frontiere de l'Assyrie*, p. 319; *Liesfeld in Memoirs*, I, 225); M. Streck in *Pady-Wimow's Realensicht*, Supplement, p. 250.

The district of Basabde is often mentioned by the Arab geographers. It was conquered by 'Iyad b. Ghassan in the reign of 'Umar. We know less of the town of the same name. The main of value of a bridge south of Hatre is 'Umar across the Tigra naturally points to a time when the main settlement lay close by. According to this usual supposition the bridge would be Basabde. If the building of a bridge, which is mentioned in the 11th century by the al-Akbar (cf. 1884), himself a native of Hatre is 'Umar, refers to this, it must really have been a restoration. The al-Akbar (in *Yaqut*, I, 50) still knew of Basabde as a village in the 11th century across the river from Hatre.

The Arab authors say that a certain al-Hassan b. 'Umar b. al-Harith al-Fahlabi, who died about 250 A. H., was the founder and eponym of the district of 'Umar. The most flourishing period in the history of the town was in the 10th century. al-Muqaddasi (p. 139) describes it as a well built and populous town surrounded by a fertile country, the harbours of Armenia, from which the Tigra boats exported honey, butter and nuts, almonds, pistachios, etc. to Mosul. In the 11th century it belonged to the Marwanids (p. v.) and afterwards to the Zangids (p. v.). At a later period we find a Kurdish dynasty, the 'Akkas, as rulers of Hatre, who claimed descent from an alleged Christian Khalid b. al-Walid, although it was known that they used to be Yazidis. (Cf. M. Hartmann, *op. cit.* p. 19.) By the 12th century, the Hattas (II, 139) found the greater part of the town in ruins. Hatre again destroyed in 12th century gained its power again after being driven out for a period by Linn Hasan and finally submitted to the Seljuks. The Kurds, who by this time had already become practically uncontrolled lords of the country, have remained to under Turkish rule. Even when in the 14th century the government took more energetic steps and the town was walled and laid in ruins in 1836, everything was soon as before. In 1899 Lehmann-Haupt (*Reisen*, I, 363 et seq.) found the Kurdish Hattas the real masters there.

The modern town of Djesro (according to Sachau 600–800 houses; according to Müller-Stamm 800 houses, of which 120 were Christian; according to Cajan 9360 inhabitants, including 5100 Christians; — according to Sachau the most widely disseminated language is Kurdish) which is the capital of a *hadd* in the Sandjak of Mardin in the Wilayat of Lyaï Rak, occupies only a

small part of the area surrounded by breast walls which the ancient town filled, while part of the ruined remainder is used as a cemetery. In the various streets a few old churches and a considerable mosque have survived. All the houses at the northern corner of the square are still occupied; the rest has fallen into ruins. The medieval bridge, which united the island in the south with the country on the west of the Tigra was — in a wretched state of disrepair — in use down to recent times but has now been utterly abandoned in decay. At the north end near the fortress there is a bridge of boats which renders communication possible with the east bank.

Bibliography: The Arabic geographers have been utilized by E. L. Stronach in his *Lands of the Eastern Caliphate*, p. 93 et seq., 124 et seq., and M. Hartmann, *Nahrain*, p. 12 et seq., 33 et seq., 98 et seq., where the other early literature is also utilized; see also both in the *Sinopis*. *Der Finer Akad.*, Berlin (1854), p. 5 et seq.; 122, (1855), p. 147–149; Petermann, *Nahrain im Osten*, II, 45 et seq.; Müller-Stamm, *Reisen*, p. 338–368; Collet, *La Turquie d'Asie*, II, 372 et seq.; G. L. Hill, *Amurath et Amurath*, p. 206 et seq.; Prosser, *Nordmesopotamische Randensieder*, p. 24 et seq. (L. Hartmann.)

DJAZM (Ar. literally "cutting"), a technical term of Arabic grammar; *spacupe*. It is the name given to one of the three moods of the Imperfect (*muḥḥā min wafāh dāḥ al-wafāh*), viz. in the one, whose form without an inflectional ending and in a consonant in a strong verb and in a short vowel in a weak verb (*yafāh*; *yafāh*; *yafāh*; *yafāh*). The *ḥāḥ* (in the strong verb at least) corresponds in form to the *ḥāḥ* (which *ḥāḥ* calls *ḥāḥ*) at the end of inflectional words; according to the Arab view it also corresponds to *ḥāḥ* (p. v.) of the noun (just as the indicative corresponds to *ḥāḥ* nominative and the subjunctive to the accusative). As it is only found in the verb, it belongs to the *ḥāḥ* al-*ḥāḥ*. The *ḥāḥ* is found after certain particles and nouns (see *al-Fajr*, p. 112, v.). — The elision of short and abbreviation of long vowels at the end of the spaced-out words are presumably to be explained from the syllable stress.

DJAZULI, AND MOSA (Ar. a "Arab al-Aziz" a Yazathar a. T. a Yazathar, belonging to the Barbar tribe of Yezid (not Yazid), as the Khilafat says) or better Yazid (1884, modern Yazid) a branch of the Yazid tribe in Southern Mesopotamia known by his short introduction (*al-Muḥḥāḥ*) to the study of Arabic grammar, called *al-Aziz*.

After the completion of his early education in Mosul he went to the east to make the pilgrimage to Mecca and Medina. In Cairo he attended the lectures of the celebrated philologist Abū Muhammad 'Abū Allāh b. Barī and it is even said that his *ḥāḥ* is entirely a reproduction of the lectures of his teacher on *al-Zabih*.

Qibla al-Sala 'also *Al-Nafi* *al-Mutahh*, a collection of prayers for the Prophet, description of his tomb, his manner, etc. published several times at Cairo and Constantinople, and at St. Petersburg 1842; 2. *Al-Nafi al-Falah*, a prayer current in Me. at Berlin 3886, Götting 820, Leiden 3200), and 3. *Al-Nafi al-Qur'an* also called *Al-Nafi al-Sala* *al-Nafi* *al-Jami*, which is found among the *Shahih* *al-Jami* in the outer tower.

Mazuli was the founder of a Mazuli sect known as the Mazuliyas, whose adherents have to repeat the *Formulas* 12,000 times and the *Doct's* *ad-Adheras* twice a day and in the night once the *Doct's* and the *Doct's* in the North.

[illegible]

HAZZAR-PASHA, ARAB. Pasha of 'Akká, a Bosnian by birth, although he is said to have belonged to Widdin or Nish, born about 1730 = 1730, was first of all in the service of the Grand Viceroy Jakhly-Begh 'Alî-Pasha, whom he accompanied to Egypt, when the latter was entrusted with the administration for the second time; he then made the pilgrimage to Mecca. When on his return he found 'Alî-Pasha, who had in the meanwhile been dismissed, no longer there, he enlisted in the Mamluks by selling himself to 'Abd Allâh-Beg, one of 'Arif-Beg's Mamluks (1768 = 1755). When 'Akká of the province of Buhaira (q. v., p. 772) he was entrusted with the punishment of the Beduins who had murdered 'Abd Allâh-Beg and forwarded the latter by communicating over **SENTRY** Arabia, a deed which earned him the epithet of *Lyazze* ("Butcher"). Suspected of complicity in the murder of Jakhly-Beg he escaped, disguised as an Algerian, to European Turkey but soon afterwards returned to marry the daughter of a Beduin chief of Buhaira of the tribe of *Hammad*. In Syria he made an independent position for himself with the help of a body of soldiers which he formed by purchasing slaves and in 1781 (1767) received the rank of *Afrâ-Miran* and in 1784 (1773) was made Beylerbeg of *Romili*. In the same year he was rewarded for his services to the Porte in the attack of *Qalâ* (Tiber) 'Omâr, he was appointed governor of the *Sanjak* of *Sakhâ*. He made use of this position to fortify 'Akkâ (q. v., p. 241) and make it his residence; he was on several occasions Wâli of Syria and leader of the pilgrims' caravan.

Defeated in 1213-1214 by Hooper's he retired to Aikah which he defended with the help of the English fleet under the command of Sir Sidney Smith, who provided him with engines, guns and ammunition. The siege began

on the 21st March and ended after repeated fruitless assaults on the 20th May. Efforts on his side had made an unsuccessful battle on the 4th April to facilitate the operations of the Turkish army. He had a monopoly of the trade in corn and cotton; with the vast sums obtained by his operations he built three splendid monuments of architecture in his capital, a mosque, a wall and a market. Regarded by the Pasha as a rebel, he was freed from the punishment threatening him by the king of the Wahabites. He once again became Wali of Syria and commander-in-chief in Hidge, but an illness prevented him from further carrying out his plans; he died in 1249 = 1804 at the age of 70.

Djebel, "stone-makers", a division of Kurds who had charge of weapons and ammunition and their transport. When included by Sultan Mahmud II the corps consisted of 700 men; under Murad III it was raised to 7300. It was composed of two divisions, *Sak* and *Dyama*, each of which contained a certain number of *septs*. The body of the **Djebel** was quartered in Constantinople in five barracks near the *Hayr Sâk* and in a *Kiosk* near the *Tup-Kâne*. The *septs* were stationed at the frontier *hanses* where they were usually called *Arak*. Their general was called **Djebelbashi**. They were disbanded at the same time as the *Janissaries* (1826-1826).

DJEBEL TARIK [See GIBRALTAR.]

QJELLÄS *sk.*, according to the dialect, **QJELLÄS** or **QJELLÄMÄ**, "an outer garment used in certain parts of the Nlaghth, which is very wide and loose with a hood and two armholes. The **QJELLÄS** is made of a quadrangular piece of cloth, which is much longer than it is broad. By sewing together the two short ends a wide cylinder is formed. Its upper opening is also sewn up except for a place in the centre where a hole is required for the head and neck. Holes are cut on each side for the arms. When the garment is put on, the seam joining the two short ends runs down the middle of the breast. The two seams which close the two **QJELLÄS** of the upper part run along the shoulders and the upper part of the arms. The head and neck are put through the space left open in the middle of the upper end. The forearms come through the holes at each side; they would be left uncovered if armholes were not sewn up to the edges of the armholes. These armholes are very short. At their lower extremity is a slit (*skiflet*) for the elbow and the top a second slit (*skiflet*) across, through which, when necessary (e.g. for the ritual ablution) the bare fore-arm can be thrust. The **QJELLÄS** is made either of native cloth or (in prosperous towns) of European. The former is woolen, rarely and only quite recently of cotton or cotton and wool. These cloths are dyed in different colours in different districts: red, brown, black, white, of uniform colour, striped or spotted. The European materials are thick, usually navy blue, black or dark grey. — The **QJELLÄS** of native manufacture consists of a single piece of cloth, which is made

of the required size. The hood is not added but consists of a quadrangular piece of cloth woven so, the sides of which are folded together behind and sewed. In the *ghillab* of European cloth, the hood is cut separately and put on. The edges of the *ghillab* are covered with beads and often ornamented with tassels, knots and smettes. — The cut, the form of the *ghillab* and the hood, the ornamentation, the style of sewing, of sewing and of lining vary much in different districts. — This garment is called *ghillab* (*ghillaba*, *ghillabiyah*). Throughout the greater part of Morocco and in the West of Algeria; it is also used in other parts of the Maghrib, e.g. in the South of Algeria and in the Makh but it is given another name there. Among the Andalusian Muslims however the word *ghillabiyah* was the name of a garment, the shape and use of which we do not know; in Egypt, we find a phonetic equivalent of the word, *ghillabiyah* (with *gh* for *gh*), but the garment it denotes is quite different from the *ghillab* of the Maghrib. The origin of the word is uncertain. Day considers the form *ghillabiyah* to be the original one and *ghillab*, *ghillaba* to be corruptions. He therefore gives the original meaning as "garment of a *ghillab*, i.e. a slave dealer". This view seems philologically untenable. It is much more probable that *ghillab* is connected with the Old Arabic *ghillab* "water garment". The dissimilation dropping of the *gh* in this word of foreign origin (cf. Nöldeke, *Neue Beiträge zur arabischen Sprachwissenschaft*, p. 53) is not surprising; moreover it has also taken place outside the Maghrib in the modern forms of the word *ghillab* thus for example in the dialect of Oman and *ghillab* with the meaning of "roll".

DJEM, son of Sultan Mehmed II. born on the 27th Safar 864 = 22nd December 1459 in Adrianople (Said al-Din, I, 474; 'Ali al-Isfahani, *Siyaat*, 47); according to eastern sources (Plumet, 2), his mother was a Serbian princess. While not yet two years old, he was appointed governor of Kastamonu in Kadija 873 = January 1469 (Said al-Din, I, 515) and in the middle of Sha'ban 879 = mid of 1476 succeeded his deceased brother Mustafa as governor of Kastamonu with a residence in Koniya; in Koniya he devoted himself to athletic exercises and translated Salim's poem *Diwan* = *Diwan* from the Persian (Said al-Din, I, 516). During this period he conducted the negotiations with the Grand Master of Rhodes, which prevented the successful blockade of the island by Mehmed II in 1480 (Plumet, 12-17).

Mehmed II died on the 3rd May 1481; of his two surviving sons, Bayazid II was in Amasia; on the 20th May 1481 he seized the capital and the reins of government. Djem who intended to dispute the throne with his brother only got as far as Bursa, which he took after a brief fight. Here in the old capital of the Ottomans, he had

the *ghillab* read in his name and struck coin. (Nesher, *Lehrbuch d. Türk. Sprach.*, *Glossar*, v. 376; of the coin executed by Ghazi al-Din, No. 146). But in 18 days he had to vacate Bursa before Bayazid's army and on the 26th Rabi' II, 886 = 23rd June 1481 was severely defeated at Yenishir (according to Hüdud al-Halaka at Saka Ona); his army of Anatolian *Azaks*, *Karamanians* and *Turkmen* of *Yarak* was scattered; he himself escaped with great difficulty to Koniya, from which he fled to the Cilician highlands, which within the Egyptian sphere of influence, on the 1st Jumada I. = 23rd June with his mother, his harem and his son. Thence he went by land via Aleppo, Damascus and Jerusalem to Cairo, where he reached at the end of September and was kindly received by the Mamlik Sultan Khayr al-Din. From Egypt Djem made the pilgrimage (December 1481 - March 1482); on his return to Cairo, he entered into negotiations with Bayazid to obtain a share of the kingdom; but Bayazid would only promise him a suitable allowance. Perishing. At the same time the Karamanli Khayr al-Din and others of his supporters urged him to return to Anatolia and once more try the fortune of war. In consequence of this, Djem left Cairo at the end of March, accompanied his adherents to Aleppo in the beginning of May, and then from Adana, where he joined forces with Khayr al-Din, to invade Ottoman territory. This undertaking which was entered into without sufficient forces and was badly managed proved an utter failure. Although at first Bayazid's generals had to retreat and some towns (Kragli and Angora) fell into the hands of Djem's troops, he could not take Koniya, which was defended, and when Bayazid joined with his army (in the middle of June) Djem fled to Yashli, his castle among the Cilician mountains, without a great battle being fought at all. Bayazid once more offered to make peace with him, and promised him a princely stipend if he would retire to Jerusalem and do nothing against his authority; but Djem refused, and stubbornly insisted on a division of the empire. When he could no longer hold out, he abandoned his army, took a ship at Konyan and went via Amasia to Rhodes, to the Grand Master Pierre d'Autesson, after receiving an assurance of protection and guarantee of the personal liberty of himself and his followers. He arrived at Rhodes on the 25th July; soon afterwards the negotiations between the Grand Master and the Sultan were begun which in the course of the next month led to the conclusion of a peace, by which the Sultan agreed to pay 45,000 ducats annually to the Knights of St. John, in return for which the latter undertook the maintenance and supervision of Djem. In the interval on the 1st Sept. 1482, Autesson had sent the prince to France, to remain in one of the houses of the order there. On the 16th October Djem landed at Villafraia and one of all spent some months at Nice; from there he was taken, always guarded by the knights, to Chiusi, Remilly, Poué, Rochefort, Sancerre, Bourges, Montreuil le Vieux, Montreuil (Languedoc), Bourges (May 1485) and then back to Bourges (1487), where he remained till the end of 1488.

When Djem made the fateful resolve to go into Christianity, he did it, as his Turkish biographer Said al-Din tells us, with the intention of securing

Rennell from Hungary and there remaining the war with Hungary. As soon as he reached France, he actually attempted to make an alliance with Matthias Corvino; but his ambassadors were thrown into prison and made away with. For his protectors and wardens regarded him solely as a prisoner to an end and had no intention of allowing him any freedom of movement, by which they might lose this valuable hostage and object of ransom. The rulers, threatened by the Ottomans — Matthias Corvino, Ferdinand of Aragon, king of Naples, the Pope and the Mamluk Sultan, — repeatedly endeavored to get Diem handed over to them by the King of France and the Knights of St. John in order to be able to use him as a means of bringing pressure to bear on Bayezid II. Charles VIII. finally decided, by arrangement with Pierre d'Aubusson, to hand Diem over to Pope Innocent VIII. who was planning a crusade against the Turk. On the 21st February 1499 Diem sailed from Toulon and made his entry into Rome on the 10th March, where he was henceforth maintained in honorable custody partly at the Vatican and partly at St. Angelo.

No longer did Diem become a ward of the Pope than the latter was approached by the aforementioned rulers to hand him over to Bayezid, who was disquieted by his brother's change of attitude, sent Muskatbeg to the Pope in 1499 to make some arrangement with him; two years later a second envoy came with presents and Diem's allowance, which was now paid to the Pope at the same rate as previously to the Grand Master. Under Alexander VI. (Roderigo Borgia), the successor of Innocent VIII., who died on the 26th July 1492, Diem's lot seemed to have improved; he was considered to be an object of the highest interest to all the powers interested in the East. At the end of 1499, Charles VIII. of France undertook his campaign against Naples and persuaded the Pope to hand Diem over to him. The latter left the Vatican to take part in the campaign against Naples but fell ill soon after and died in Naples on the 25th February 1495. Alexander VI. was surprised at having possession of Diem (Sa'd al-Din, R. 38, tells the story of how a letter, hired by the Pope, caused Diem's death with a poisoned razor; a similar story is given by Kellia, *France*, i. 1, p. 141; at great length by Kautzsch, 170 v. 109, and *Grundriss der Islamkunde*, i. 105. The latter sources say that a renegade named Mustafâ — afterwards known as Kodja Mustafa Pasha — disguised as a hater and commissioned by the Sultan did the deed and was rewarded by the Sultan with titles and offices; this tale may be traced to Mustafâbeg's mission to the Pope in 1499. Charles VIII. had the body embalmed and sent to Genoa where it remained guarded by Diem's Turkish retainers; thence it was brought to Castello dell' Ova, 11 miles out 144 four years later and only after repeated requests of Bayezid II's part to have the body handed over to him, that Diem's remains were finally sent to the Sultan by the King of Naples; they were buried in Bursa.

Oghuz Diem, one of Diem's sons, was in the Old Serai at the time of the accession of Bayezid II. and the latter had him strangled (Lanct, *Hist. Secr.*, 625); a second son, Murâd, lived at a later period in Rhodes, became a Christian and on the conquest of the island in 1522 fell into

the hands of Salimân. I who had him and his sons executed. One of Diem's daughters who had remained in Egypt, was defaced up after his death to Bayezid in 909 and married by him in the same year (= 1503-1504) to the son of Sinân Pasha (Sa'd al-Din, ii. 227 v. 109, cf. v. Hammer, *Gesch. d. Osm. Rêichs*, ii. 153. 332). We know nothing of the fate of his mother, to whom he was deeply attached and with whom he corresponded from his exile.

Diem's ultimate personality, his detention in the land of the Franks and his tragic and quite early appeal to the imagination of historians and writers of romance both in east and west. V. Hammer in his *Geschichte des Osmanischen Reichs*, ii. was the first to give a critical account of Diem's life, based on Sa'd al-Din's detailed and trustworthy statements; we now have the authoritative monograph by L. Thumme, *Diem-Sultan* (Paris, 1892). His collected poems exist in manuscript in Berlin and Munich (cf. Lauth, *Verh.*, 64 v. 109; v. Hammer, *Osm. Reichthum*, i. 145; Gibb, *History of Ottoman Poetry*, ii. 70-92); Forlân gives specimens of his letters to his brother (*Monographi Salimân*, i. 1), also the manuscript in the Vienna Hofbibliothek, No. 313; the authenticity of the correspondence with his wife Sawlrad, given by J. H. de Koceler, *La vie du Sultan Mehmet* (Lahen 1683) has still to be investigated; cf. also Grigorovius, *Diem in der Middle Age* (Strassburg, 1881), Vol. vii. 305-309, etc.

J. H. MURDMANN.

DIENDERELI (See **DIENNE**, p. 833 l. f.).

DIENNE, a town in the French Sahara, 200 miles S. W. of Timbuktu and 100 N. E. of Segou Sikoro, in lat. 13° 35' N. and long. 6° E. (or Greenwich). From the name Dienn, pronounced Djinn or Ginn, is probably derived the name Dienna given by the Portuguese in the 17th century to West Africa. The first European to reach Dienne was the Frenchman René Caillié (11th March 1825).

Dienn is at some distance from the left bank of the Niger, a tributary of the Niger on a rocky plateau in the midst of a wide plain which is covered with water in the rainy season. This remarkable feature of Dienn was noted by Len Africana. 'During three months of the year (in July, August and September) this town is like an island, for at this season the Niger overflows its banks just as the Nile does' (Len Africana, 94 vii; ed. by Schuler, Vol. iii. 285). Dienn is further separated from the adjoining country at this season by a girdle of swamps, a circumstance which has very frequently enabled the inhabitants to ward off hostile attacks. The town which is surrounded by a wall of baked bricks with 14 gates, is about 2000 yards long and 700 broad. It has 6000 inhabitants (Boko, Hambar and Fulbe), some of whom strongly claim to be of Arab descent. The language most commonly used is a dialect of Hausa (Songhai though known to many people is only used for trading purposes).

Dienn was for long of great economic importance. In the 17th century the author of the *Tarikh al-Hadda* wrote: 'It is one of the great Muslim markets. In it the salt-traders (from the mines of Taghazza 3 days' journey north of Tagden) and the gold-traders (from the mines of Ifu according to Winger = Bekura) meet. . . . It is an account of this favoured town that the

assembly in Timbuktu from all points of the compass... (Patriarch of Soudan, trans. by Houdart, Ch. I, p. 22). It was further a great centre of the slave-trade. Djenné was also a kind of intellectual centre and a rival of Timbuktu in this respect. The teaching of theology and law flourished in it. Since the occupation of Djenné by the French, it has still retained some importance as a market for the immediate neighbourhood but the suppression of the slave-trade has dealt a death-blow to the prosperity of the town. Its intellectual activity has also sadly declined. Theological instruction is limited to reading the Koran and to the knowledge, absolutely necessary for the correct performance of ritual ceremonies. The religious life there is rather lax, and the brotherhoods, the Qadiriya and Tijaniya, which have settled in the town, have great difficulty in winning a few adherents.

The foundation of Djenné seems to date from the third century A. D. In this period the Negro, who inhabited the district in which Djenné now stands, were conquered by the Nono, invaders from northern Masina, who soon became quite assimilated to them. The conquerors finding themselves rather cramped in Djenné (Old Djenné), the capital of the Nono, moved their residence to a desert place somewhat farther north and there built the present town of Djenné. At this time they were heathens, but readily converted to Islam. Only the chiefs retained the ancient religion for some centuries longer. Finally in the 15th century A. D. (1462 A. D.) one of them, Koumbou (Koumbi Kanbara) became a Muslim. According to the Patriarch of Soudan he destroyed his palace and replaced it by a mosque, which remained unaltered down to the beginning of the 18th century and whose remains still survive. The erection of this building was traditionally ascribed to a Moor named Abdou Idris, who is further credited with teaching the people of the town to build and decorate their houses in the style still used in Djenné and the neighbourhood. Koumbou's descendants (the Mass dynasty) remained masters of Djenné till the end of the 17th century A. D. when they were overthrown by the Songhai. Some 150 years later about 1680 after besieging it for seven years and levied an annual tribute on the inhabitants Songhai rule was however quite advantageous to the people of Djenné; for owing to the security which reigned throughout the country there were able to trade as far as Timbuktu, Gao and the lands at the bend of the Niger. The Songhai were succeeded by the Moors. Djihad Pasha, entrusted by the Sultan Ahmad al-Mansur al-Mukdashi with the task of conquering the Sudan, took Djenné about 1596 A. D. Moroccan rule lasted till the beginning of the 18th century. The authority of the Sultan was maintained at Djenné by a Pasha, and afterwards by a *Khalifa*, assisted by an *Amir* or treasurer and a *Adib* in command of the troops. These officers controlled the local administration which was in the hands of a native chief or *Djenné-Koi*. Moroccan rule was disastrous for Djenné. Numbers of the inhabitants, transported by the caprices and treachery of the Moors, decided to emigrate, while the Barbarians began in the 18th century to make incursions which grew more and more frequent. One of their chiefs Sigida (cf. the article BARBARA), even succeeded

in taking the whole district of Djenné with the exception of the capital. In the second half of the 18th century.

The invasion of the Fulbe put an end to Moroccan rule. The people of Djenné, wearied of their old masters, voluntarily submitted to the Marabout Ahmadu Shaihu in 1820 but on his death the town fell up by the Moors resulted in the massacre of the Fulbe who had settled in Djenné and forced Ahmadu to besiege the town which was only taken after a regular siege. The Moors were then banished and their goods distributed among the Fulbe. Ahmadu left the local administration in the hands of a native chief but he was careful to leave behind him one of his own officers to supervise him and make Djenné the headquarters of the *Amir* *mangel*, or commander-in-chief of his army. In the course of the 19th century, Djenné shared the vicissitudes of the Fulbe kingdom. Taken in 1863 by al-Jiddi Umar, it remained in the possession of his successors till 1893 when it was occupied by French troops under Colonel Archizard.

Patriography: Patriarch of Soudan, trans. Houdart (Partitions de l'Église de l'Afrique Occidentale Française, Paris 1900), Chap. 2, 11. North, Notes and Excursions, T. IV, p. 604 et seq., R. 1811, Journal du Voyage à Timbuktu et à Djenné par l'Afrique Centrale (Paris 1830), Vol. II, 12, 1871, Notes, Timbuktu et Djenné (Paris 1871), Ch. 1, 2, 3, 4; Ch. Montell, Monographie de Djenné, Cercle de Fila, (Tulle, 1903). (G. VYAL.)

DJERBA (the Garden of 120 Africans, and Garden of Mammo) is an island in the Mediterranean in the Gulf of Gafsa. It is in the form of an irregular hexagon, measuring 26 miles from east to west and from north to south from 11 to 26 miles and having an area of 224 sq. miles. An arm of the sea about 40 miles broad separates the western side of the island from the Tunisian coast while to the south it is only separated from the mainland by the "Sea of Kerkira", which is practically a lake as it only communicates with the sea by two narrow straits. The one on the east opposite Ajaccio is only 1½ miles broad but accessible to ships drawing from 10 to 12 feet of water, the other in the east opposite al-Kerkira, from 2 to 4 miles broad, is so shallow that cannon can enter it at low water by following a line marked with posts (1895 *al-Jiddi*). In the Roman period a narrowway, the remains of which still exist, completely flanked this passage. The coast-line about 85 miles long, bordered by sand-dunes and lagoons, is on the whole straight, except in the south where the Gulf of Gafsa and al-Kerkira run inland and the peninsula of Ben el-Melike and Tishellia run out into the sea. The stations around the coast render difficult to this north for example a depth of 3 fathoms is only reached at a distance of 3 or even 6 miles from the shore. The hills are very marked in these waters, where they make a difference in depth of 6 fms and leave large areas uncovered at low water.

The soil of Djerba is composed of argillaceous schists and limestone covered in the north-east of the island by sand. Its contour is well marked: no point exceeds a height of 100 feet and the general appearance is that of a plateau sloping gently to the north-east and cut from south-west

the inhabitants of the city, was known to the ancients as *Mentex*. The Phoenicians had trading-outposts there; the Carthaginians and after them the Romans held it under their sway. In imperial times, *Uthra* seems to have been thickly populated and very prosperous. It contained several towns, *Mentex* (el-Kanana), *Tigra* (near Ajfou), *Harthun* (not far from *Tunis*), and near the modern *Hâmi-Sûk*, *Girba* or *Girba*, in which the island owes its name. After belonging to the Vandals and then to the Byzantines, the island was taken by the Arabs who captured it about 43 (665) under *Umar* ibn *Uthayr* al-Aghar. We know practically nothing of its history in the early centuries of the Muslim occupation. Al-Bakri only mentions that in his time, *Uthra* was peopled by *berber* *berbers*, who only spoke *berber*, possessed *Kharrûj* *berbers* and lived by brigandage and piracy (*Bakri* *Paris* *de l'Asie*, *loc. cit.*). Al-Bakri (*Uthra* *de l'Asie*, *loc. cit.*) calls the *Uthrians* "a people of bad and hypocritical character, always ready to rebel and unwilling to receive law from any one". It may be surmised that, protected by the situation of the island, they remained practically independent of the Muslim sovereignty of *Uthra*.

On the other hand they had to put up with severe fighting with the Christians. The Normans of Sicily tried to put an end to the depredations of its corsairs by taking the island itself. In 1133 A. D. George of Antioch, Roger II's Admiral, occupied *Uthra*. The women and children were sent captives to Sicily and the island incorporated in the kingdom. A rising which broke out in 1133 provoked strenuous reprisals but did not save the Norman sovereignty. 'Abd al-Mu'izz after making himself master of *Mahdiyya* and all the Tunisian coast, drove the Christians out of *Uthra* (1139-1160). They reappeared in 1233 when Roger Doria, Admiral of Peter of Aragon, King of Sicily, took advantage of the dissensions which were rending the Hafsid kingdom to attack *Uthra*. He twice landed troops on the island (1234-1235), ravaged it, carried off 2000 inhabitants whom he sold as slaves in Europe and finally took possession of *Uthra*. He offered it in homage to the Pope, who granted it to him as a hereditary fief. It remained in the hands of his heirs till 1310 A. D., when two factions divided the population, that of *Mahdiyya*, favourable to the Christians, and that of *Masana*, hostile to them. The latter appealed to the Hafsid Sultan, who twice tried without success to dislodge the Christians. The rivalry between the two factions however continued to foster disorder. To put an end to this state of affairs, Frederick of Aragon to whom the grandson of the last male descendant of Roger Doria had pledged *Uthra*, called in the Catalan adventurer Ramon Montaner. The latter established peace by bloody executions and governed the island for three years (1311-1314) after which it was restored to the direct rule of the Kings of Sicily. The chicanery and exactions of the governors provoked another rising in 1334. The Sicilian troops were driven out, the castle of *Chahell* (Dordj *Khahell*), built by Roger Doria, was taken by assault and those soldiers, who escaped the massacre, sold as slaves. The Kings of Sicily, nevertheless, insisted on asserting their claim to *Uthra*. In 1353, with the help of the Genoese, they succeeded in regaining a footing on the is-

land, where they maintained a garrison till 1392. But the attempts made in the century following by King Alfonso V (1417-1458) to regain this important position, ended in failure.

Free from Christian rule, the *Uthrians* did not long submit to the Hafsid. According to Leo Africanus, on the death of Sultan Abd Umar 'Oghman (1480 A. D.), they gained their independence and to protect themselves from the attacks, which they always had to fear from the mainland, destroyed the customary, which skirted the southern coast with the continent. About the same time, the chief of one of the two *zawaj*, which disputed the supremacy of the island, slew his rival and founded a hereditary principality. These changes were accompanied by great hardships and misfortunes; according to Leo Africanus, ten *Shakhhs* were murdered in ten years. In spite of this anarchy, trade was flourishing enough to yield the rulers of *Uthra* 50,000 doubloons from the customs and *shahs*. A few Italian merchants continued to visit the harbours of the island and traded there with merchants from Tunisia, Turkey and Egypt. The inhabitants enriched themselves by the export of chickens to Egypt but their chief source of wealth was piracy on Christian nations.

In the second half of the 15th century, *Uthra* had become a centre of the literary movement, at the beginning of the following century 'Abd al-Bakri and his brothers made the island the base for their operations in the Mediterranean. Dragut next made the island his headquarters and maintained his hold on it in spite of the efforts of a section of the inhabitants to drive him out; the waters of *Uthra* afforded his ships a safe refuge from the attacks of the Spanish fleet. But he was finally blockaded by Andrea Doria in the sea of *Uthra* and only escaped by having his galleys hauled over the peninsula of *el-Kanana* by night (1541). Dragut allowed the *Shakhhs* who governed the island to remain in power but he took care to rebuild the *darj* of *Hâmi-Sûk* (*Harj al-Kabir*) built a century earlier by the Hafsid. The rebuilding was finished in 1557 and is commemorated by an inscription which still exists (cf. R. Hamet and Hodas, *Epigraphie Tunisienne* in the *Bulletin de l'Association Africaine* 1882, p. 196). Three years later a Spanish expedition under the Duke of Medina-Celi sent against Tripoli appeared before *Uthra*. The Spaniards took possession of the island without difficulty and placed a garrison on it (February-March 1560). But, defeated on the 15th March by Piali Pasha, Medina-Celi had to retire to Sicily leaving the garrison exposed to the attacks of the Turks. The Spaniards, commanded by Don Alvar de Saude held out until famine and disease forced them to capitulate. They were all massacred and their bones used to build a pyramid near the *darj* al-Kabir, called *Harj al-Rûla* (the "cattle of heads"), which was not destroyed till 1848.

When the Turks had definitely established themselves in Tunisia, *Uthra* recognised their authority, while continuing to be administered by its hereditary *Shakhhs*. The family of *Harman*, which held this office in the 17th century, was succeeded by that of the *Qhaladyn*, descendants of *Muhammad*, who had been given the office by Dragut and whose last representative was deposed by the Bey 'Ali b. Husain b. 'Ali. These *Shakhhs* showed themselves very independent of the Tur-

with Pagras as may be seen from the rebellions which broke out in 1599, 1600 and 1601. The peace of the island was also disturbed by the attacks of enemies from without. The people of Tripoli tried to invade Igerba in 1603 but the expedition was speedily repulsed. Driven into the sea and exterminated. In the 17th century the Arguinians and the Accars, aided in by Ahmad b. Maza, wished to avenge his father, who had been assassinated by orders of 'Ali Pasha, attacked the Ghazik Mazb b. Salah and forced him to seek refuge on the continent. Scrambling upon after with troops supplied him by Yunes-Bey, Maza defeated the partisans of Ahmad, put a great many to death and with their bones erected a pyramid near the Dardj al-Kahir. In 1793, the Corsair 'Ali Dindar after having driven out of Tripoli the English 'Ali Karamanli, tried to invade Igerba. His lieutenant Karam Muhammad landed on the island, forced the Tunisian governor Hamida to take to flight, but on the arrival of Hamida, the Bey of Tunis, had to vacate the island after occupying it for 58 days. In the 18th century, Igerba, whose prosperity had already been much affected by epidemics of plague (1809, 1864), and by the oppression of slavery, which kept caravans from the island, suffered a great deal from the oppression of a ruling province in 1864 by the preaching of a pretended mahdi. Since then absolute tranquillity has reigned in the island. The establishment of the French protectorate caused no trouble. On the 28th July 1881, French troops occupied the Dardj al-Kahir without opposition. Military occupation was of short duration only and at the present day there is no longer even a garrison in the island.

DJESSORE is a district in the Presidency of Bengal, lying in the Hooghly Delta some 60 miles East and North East of Calcutta, between 22.47—23.47 degrees North and 88.40—89.50 degrees East. Of its population of 1,800,000, 61% are Muhammadans. It is entirely an alluvial country formed by the rivers Hooghly and Meghna, and is famous for its rice cultivation. A Muhammadan governor, Khwa Dindar 'Ali, ruled in Djessore in the middle of the 14th century, and subsequently Muzah chiefs controlled the country

under the Muhammadan Kings of Bengal. The Nawabs of Dhaka interfered in the district early in the 17th century. In 1765 the administration passed with the rest of Bengal into the hands of the East India Company. The Muhammadan residents are chiefly converts from the aboriginal Samandars of the District.

DJEZÄ'IR-I BÄHR-I SEFID. (See AK DÄR, p. 224).

DJEZÄ'IRLI GHÄZT HASAN PASHA nicknamed *Paşavir* ("scholar-mountain") one of the greatest High Admirals (Kapudan Paşa) in Ottoman history, belonged to Rodatli (Telhar-daghi) on the Sea of Marmora, where he is said to have been a slave of a merchant named Haidjli Osman Ağha, after being manumitted took part as a janissary in the Austrian war of 1737—1739 and particularly distinguished himself at the battle of Koca (Hizdjak) on the 23rd July 1739. At the end of the war he went to Algiers where he became a dey and finally was appointed Beg of Tlemcen. To escape the machinations of the Paşa of Algiers he escaped to Spain via Oran, where he was kindly received by Charles IV. Recommended by him to the King of Naples and the latter's representative at Constantinople, he returned to the Turkish capital in 1760 and was once appointed by Sultan Mustafa III to the command of a warship; in 1760 (1766-1767) he was appointed to the *Kapudani* (flagship) and in 1770 took part in the naval war with Russia. At the battle of Çesme (q. v. p. 830) the *Kapudani* commanded by him went on fire in attempting to grapple the Russian flagship and both vessels burnt to the water's edge; Hasanbey escaped, although wounded, by swimming and reached the Lardanelles by land; on the 10th October 1770 he succeeded in winning back the island of Lemnos from the Russians by a stroke. For this brilliant feat of arms he received the title *Ghazal* and the rank of Kapudan Paşa in 1773 and 1774 in his capacity as *Sevaskier* or *Sevask* he took part in the war with Russia by land; after the peace of Kaimurdja (July 1774) he resumed his post of Kapudan Paşa. During the next two years (1775-1776 = 1775-1776) he destroyed the power of Ghazik 'Abd al-Omar and his sons in 'Akka; in 1772 (1778), when the negotiations with Russia regarding the Crimean threatened an outbreak of war, he made a demonstration with a fleet in the Black Sea, which however quite failed in its purpose while several of his larger ships were stranded or otherwise lost and the crews were decimated by the plague. His expedition to the Morea took place in 1793 (1779), where he routed the Albanian hordes who had settled there on the withdrawal of the Russian fleet. In 1794 (1780) he appeared before Alexandria and collected the Egyptian tribute, payment which had been suspended for several years; on his return voyage he chastised the rebellious Mamluks. In 1795 (1781) on the death of the Grand Vizier Silahdar Mehemmed Paşa (20th February), at Edinburg he resented the duties of Grand Vizier for two months. For the next few years he was mainly occupied with the reorganisation of the navy, built the first gunboats for the Ottoman fleet (1784), organised the garrisons in the forts

(RICHARD HARRIS.)

DIJDAH, pronounced *Idjidda* by Arab authors, as Arabic script and the Rail Sea in 21° 25' 30" N. lat. and 39° 16' 45" E. long., its surroundings are desert. In spite of its numerous channels and bad water-supply, the town dates from pre-Muhammadan times, although we have no authoritative statement on the point (cf. Huxinger, *Die Vögel Afrikas*, p. 39).

The foundations of its future importance were laid in 10 A.H. by the Caliph 'Uthman, when he chose it as the harbour of Mecca. Mecca, the centre of the whole Muslim world, was from earliest times destined to be a great importing centre. The town was provided with supplies from Egypt via Djidda. Djidda is thus the key of Mecca and Mecca and Djidda are economically and therefore politically dependent on Egypt. The customs (see *Al-Bihar*, p. 79 and 103) of Djidda, which is described as a prosperous commercial town even in Ishak's time, formed a considerable source of revenue to the rulers of the Hijaz at that time. In addition there were the taxes levied on the pilgrims: for it was here that those who came by sea, particularly the African pilgrims who sailed from Aden (q. v., p. 210), landed on Arabian soil. Nassir Khuraw (ed. Schofer, p. 83 = j. 182—183 of the translation) in the 14th century found the unwalled town, whose population he estimated at 30,000, governed by a slave of the reigning Shari of Mecca, whose chief duty was the collection of the revenues and taxes (transl. by Justel, i. 124, 126) inasmuch as the Shari's revenues were dependent on the receipts of the harbour of Djidda. The town gradually became a centre of the world's commerce, whose ships from Egypt and those from India and East Africa.

The *Al-Bihar* (ed. de Goeje, p. 73 ff. 119.) gives us a clear picture of the town, as it appeared in 570 = 1183: with its red hat and stone houses, the remains of its walls and the mosques, which were said to have been built by Umar and Harun al-Rashid, and its inhabitants of Shari descent, and he praises Salih al-Din for having abolished the taxes levied by the Sharifs.

The tolls which continued to be levied on the Indian ships, sometimes threatened to become oppressive. On the other hand the cupidity of the sultans of the Hijaz, the Mamluks of Egypt, had been arrested. After 1542 they took the collection into their own hands, later to share the plunder with the Sharifs (see Snouck Hurgronje, *Atika*, i. 92—93, 94). Finally in 1511, Solhan Khannab al-Jahiz sent a special Wall to Djidda, who surrounded the town with a wall to protect it from the Bedouin and made it a base for the navy fighting the Portuguese (ibid., i. 102). That the fortification was not unnecessary was shown by the fact that when the Egyptian sultanate had been changed for the Turkish, it was attacked by the Portuguese in 1541 (ibid., p. 104). Under the Turks also the revenues of the harbour of Djidda, where a Turkish Wall resided, were shared

(*Al-Bihar* Khafis, *Al-Bihar*, Constantinople 1145, p. 319; *Annales*, ii. 184). These revenues, of course, began to diminish although the trade in coffee and Indian goods was still considerable as late as the beginning of the 17th century.

In 1699 the Wahabites besieged the Shari al-Jahiz without success. In 1744, which was severely punished for he had ultimately to submit to them, and Mohammed Ali finally restored Turkish supremacy. In 1844 Berchoud described Djidda as a town with 12,000—15,000 inhabitants, whose recently built walls, with the stone houses, that had been growing up under Egyptian rule, enclosed a wide area covered with wretched mud huts. He was particularly struck by the fact that in the crowds that thronged Djidda, the indigenous elements were scarcely represented, while strangers from Yemen and Harar were particularly numerous. In 1840 Egyptian rule gave the place the direct rule of the State, which as before was represented by a Wall in Djidda. The occupation of the English and French consuls and other Christians in Djidda on the 15th June 1858 resulted on the 15th July in the bombardment of Snouck Hurgronje in *Hijdegan van de Turk. Land en Verkeering van Nederlandsch-Indië*, 35 Series, ii. 381 ff. 399 ff. 197. Malvern, who made the pilgrimage in 1860, describes Djidda in very similar terms to Berchoud and estimates the population at 15,000 (Huxinger in 1864 at 40,000). The opening of the Suez Canal brought an end to Djidda's share in the world-commerce, which had for years been diminishing. Cf. Snouck Hurgronje, in the *Verslag der Geschied. der Arabische*, 141. It has still considerable imports (about 1,500,000) in the shape of supplies for the Hijaz and exports practically nothing in return. Djidda's main importance now lies in the fact that it is the landing-place of pilgrims for Mecca, to whom 80,000—90,000 annually enter Arabia here. The line to Mecca planned in connection with the Hijaz railway has not yet been made.

The town which now has about 30,000 inhabitants (Arabs mingled with Turks, etc.; about 50 Christians) has been the headquarters of a Khawass since the Wall transferred his residence to Mecca. The rows of white houses in the town stretch up the slopes of a low hill along the shallow bay, which the larger ships cannot enter. The 10 feet high wall around the town is pierced by three gates, the main entrance at the customs-house in the west, the *Al-Bihar* in the east, near which are the European consulates and before which is the celebrated and much visited tomb of Eve.

DIJDAH The spread of Islam by arms is a religious duty upon Muslims in general. It narrowly missed being a sixth *shari*, or fundamental duty, and is indeed still so regarded by the descendants of the Khawass. This position was reached gradually but quickly. In the Moroccan Sines of the Murids' province under attack is sought; no

After the break-up of the Almohad kingdom Djibouti fell to the Hafsiys and repeatedly formed a focus of contention between the rulers of Bougie and those of Tunis. In consequence of these hostilities the inhabitants made themselves practically independent of both parties (Lecoq, *Afrique*, book vi., p. 24; Schaller, *ibid.* 83). They lived by the export of corn, wax, honey, ~~and~~ and figs, which they sent to Tunis, Egypt and even to Italian cities. Their harbours were frequented by the ships of various nations, from Naples, Majorca, Catalonia and Genoa. The importance of the town as a commercial centre was particularly well revealed. Djibouti's commercial importance decreased in the 17th century as a result of the increase of piracy.

At the beginning of the 18th century, the Venetians, uneasy at the occupation of Bougie (p. 766) by the Spaniards, secured Djibouti under the leadership of Antonio Doria. But by the next year 'Abdî captured the Venetian fortress at the invitation of the inhabitants, supported by the Kabyl chief Agmat b. al-Hajj, and made Djibouti his capital. In 1772 he proceeded thence to besiege Bougie and in 1786 to the conquest of Algiers (see the article 'Abdî', p. 471). Khair al-Din defeated by the Kabyls sought refuge here while his enemies worked Miltida and seized Algiers. He remained in Djibouti from 1790 to 1797, made it the winter quarters of his fleet and was even working making it his headquarters when he gave up this idea on taking the possession of Algiers (cf. the article *Khair al-Din*); as a reward for their fidelity, however, he granted the people of Djibouti and their descendants, complete exemption from ~~taxes~~ ~~the~~ ~~land~~.

Throughout the whole of the 18th century and the first half of the 19th century the pirates of Djibouti continued their piracies, and thus provoked reprisals from the Christian powers. A Spanish fleet commanded by the Marquis de Santa Cruz effected a landing at Djibouti in 1691 and set the town on fire. In 1663 on the advice of admiral Duquesne and the engineer Clerville the French government proposed to make Djibouti a permanent naval base for the cruises sent against the Barbary corsairs. In the following year a squadron under the command of the Comte de Beaufort appeared before Djibouti and landed a body of 8000 troops commanded by the Comte de Matignon. The French troops occupied the town on the 23rd July 1664 almost without striking a blow and made entrenchments and fortifications some distance from the shore. In particular by a sand between the two leaders, they remained inactive in their positions and allowed the Algerians to send reinforcements and plant batteries of large caliber. Overcome by the enemy's fire they had to quit the town on the 31st October 1664 and embarked with great difficulty after losing 2000 men.

To guard against future attacks, the Turks imposed a permanent garrison in the town; ~~but~~ it was much too weak to overcome the Kabyl tribes and remained almost constantly besieged in the citadel. The boys turned on no negotiations with the natives, from whom they had to get the wood necessary for the building of ships, except through the merchants belonging to one of the branches of the family of Makran. One of them, al-Hajj 'Abd al-Hajj, ~~was~~ appointed wazir of Djibouti in 1668 (1755) and transmitted this honour to

his descendants. Djibouti seems to have recovered its commercial activity in this period. 'The town', writes the French traveller Peyssonard, 'is inhabited by Moors, some of whom are merchants at call; they buy the wax, hides, and wool of the Kabyls and sell them at La Calle, Tabarques and Tunis. They also collect coral. Although stretched in appearance, the town contains to be prosperous'.

This comparative prosperity received a shock from the Kabyl invasion of 1803. The Marabout (Su Dali al-Hajj) Muhammad b. al-Hajj attacked the town and the Turkish garrison fled. Su Dali proclaimed himself Sultan and granted the government of Djibouti to one of his partisans with the title Agha. Sent with a fleet to chastise the rebels, the French (Maurice) bombarded the town without any result (1805). Shortly afterwards, however, the inhabitants, being badly treated by the Kabyls, submitted to the French, who retained another garrison in the town.

The collapse of Turkish authority in 1830 restored their independence to the people of Djibouti and they retained it till 1839. The pillaging of a French trading vessel about this time determined Marshal Valée, governor-general of Algeria, to occupy the town on the 15th May 1839. But the garrison, being unable to communicate with the hinterland, was cut off by the Kabyls till an expedition, led by General Saint-Arnaud, effected the submission of the tribes of Little Kabylia in 1851.

(G. VERR.)

DJILIK, a place in Syria, the actual site of which was forgotten by the Arab geographers at quite an early period; sometimes they located Djilik in the Ghuta, sometimes they identified it with it, and sometimes they identified it with Damascus; no unlucky guess by 'Arabi has yet led scholars to locate it in the land west of the Jordan (according to de Gourn's proposal in *Djilak*). Djilik was one of the residences of the Khalifa ~~Abd al-Malik~~ Asmar, next to Habbaya (q. v., p. 988) the most important and most often mentioned. They had a family mausoleum here and suffered a defeat ~~here~~ at the hands of their enemies, the Lakhmids, a detail, which would not suit the neighbourhood of Damascus or other suggested identifications given above of Djilik. It must have been a place of some size, with several churches. Djilik was celebrated for its gardens, particularly its orchards of olives, and its plentiful water-supply had become proverbial. A clue to its location is given in the old poetry by the mention of several places, all south of Hama and Dhwala, most as *Harit* and *Kadda*, which is confused in the *Kishshat al-Adab*, l. 10, with the seaport of the same name (Sidon) Djilik by southeast of Hama; coming from Arabia, 'the mountains of snow were seen behind it'. It was not very far from Dura (q. v., p. 765) and ~~as~~ ~~the~~ ~~fact~~ that the road thither could be seen from its gates. A road from Damascus to Egypt also passed through its immediate neighbourhood. When we further consider that a *Zanfara*, or ruine bearing its name was mentioned in the neighbour-

of Arabic this pronunciation is no longer found except in the recitation of poetry, its character therefore is archaic and almost identical to the Arabic for the southwest of Arabia it is found in the conjugations of verbs whose first radical is gim, when this radical forms a syllable with the penultimate finally in the great majority of the dialects of Southern Morocco and also at Nedroma (Algeria) it is in dissimulation the pronunciation of gim when followed by a shaddah is as ad.

3. In various dialects, the original β has passed by palatalization to a nasal almost everywhere γ or η , a medio-palatal pronounced by raising the middle part of the tongue, is the present status of β as found in the majority of the Hindustani dialects of North Central and South Arabia. It is also that in the Pahlavi and Ptolemaic of Upper Egypt and in some parts of India.

3. When the original closed γ has by palatalization become γ^h or γ^c , the last stage of evolution is the medio-palatal spirit γ , which is confounded with the medio-palatal γ and is often confounded with λ . This pronunciation γ of γ^h is attested to etymologically by numerous grammatical and lexicographical. At the present day it is general in the region of the Lower Euphrates, it is the pronunciation most common in Iraq, it is frequent but not regular in various districts of South-west Arabia. In the dialects of South Arabia and other Arabian dialects, it can only be used in a few specific cases.

4. In many instances, the original λ has passed by affrication to a sound almost equivalent to τ , a pre-palatal fricative with the tip of the tongue. This pronunciation for which we have evidence is the 'ts' in the golden period of classical literature (cf. *Zwischen zur Assyriologie*, vii, p. 126). It is now found in certain places in Central Asia. It is usual in Silesia, the 'tsch' among the Muslims of Jerusalem, at Aleppo and in the surrounding country. In North Africa, it is almost general; the rural and urban dialects of northern Algeria; it has survived at Tangier and perhaps at other places in Southern Morocco in cases of gemination (e.g. *tschch*), 'lock of hair', but plur. *tschch*.

When the original closed *g* has been lost by proper palatalization, the *g* stage of evolution is the prevalent at The promontorium of *g* in the sea now in vogue in the towns of the Syrian coast, certain districts of Lebanon, Antioch, Mesopotamia and among the Christians of Jerusalem. In North Africa, it is found in districts of Tunisia, Tripolitania, Morocco and Southern Algeria; it is even found in certain places in Northern Algeria. It was probably the usual pronunciation of *g* in the Arabic of Gomeria.

6. Lastly it should be noted that in the towns of Northern Africa, there is a tendency in certain individuals to pronounce a dialect known as by the population of the hill communities of a. This tendency seems limited to certain social groups (Jews, as in certain ~~regions~~ of society (the lower classes of Northern Morocco) and is not general enough for it to be called anything but an individual peculiarity.

Synode des anno, Firkaprecht und Schick-
sprache im alten Arabien*; Brockmann, *Grund-
riss*, t. p. 122, 123 und die referenzen; Kuhn-
ly, *Handb.*, 2. Aufl., p. 492, Schmale, *Islamismus*.

[illegible]

QIMAT (Malay) *an* a market, more particularly a written annals. The word is of Arabic origin. *Qim* means the

DINAS, (*s.*) also *dināḥ*, a technical term in the Mishnah, "Assessment," "Estimation," "Pen." On the various kinds of this figure (direct used in practical works), cf. Mishna, *She'Aravot de Shabbe*, p. 154-161, and Gerson de Tany, *Kiddushin u' Penei de Tsamut de Pitruah* (Munkacs) p. 120 v. seqq.

LYNN. The Lynn for Martins and also of
hick hollies (*Liquidambar*), intelligent, impenetrable,
capable of appearing under different names and of
carrying out heavy labours (Bakhow) on Kur II,
Ivan, i. 1. Named, *Lyne-ka*, also *lyne*. They were
created of smokeless fumes (Kur I, 14), white
marking and the angels, the other two classes of
intelligent beings, were created of clay and light.
They are adorable. Mohammed was sent to them
as well as to mankind, none will enter the Gar-
den and none will be sent into the Fire. Their
relation to Allah the Supreme, and to the Shar-
ips, is general, is obscure. In Kur. viii, 48,
Allah is said to be of the Lynn; but Kur. II 3
implies that he is of the angels. In consequence
there is much confusion, and many legends and
hypocrites have grown up, see the latter passage
in Bakhow and in Rieu's *Musings* (i. pp. 288 et seq.
of Corr. ed. of 1897). The native lexicographers
used to explain the name Lynn from *lyne-ka*,
"burning concealed, hidden," (see *Lyne*, a. v.
and Bakhow on Kur. II. 7; Fleischer's ed. I. p. 22,
l. 15.) But this etymology is very difficult, and
exclusion of a loan-word from *gynai* is not quite
excluded. "Nationem densa uniformisque loci"
(Serv. Verg. G. I. 302) exactly expresses the strong
localization of the Lynn (cf. e. g. Nakhle, *Mé-
moires*, I. pp. 64, 78 and II. pp. 65, 89) and their
quasi-standing as deities in old Arabia (Bohasson
Smith, *Rel. of Semites*, p. 121). An individual
is a *lyne-ka*; *lyne* is used synonymously with *lyne-
ka* (but see *Lyne*, *Lyne-ka*, p. 497 c); *lyne-ka*, *lyne-
ka* are almost of the Lynn. For an ethnologic
point of contact with Lynn see Nakhle, *Notes*
Hebrées, p. 63.

Consideration of these divides naturally under three heads, though these necessarily shade into one another.

1. The *Ejhan* in pre-Islamic Arabia were the symphs and layrs of the desert, the slde of the life of natvty wlll unenriched and hostile to man. For this aspect, see Robertson Smith, *loc. cit.*; Nöldeke in *ancient Arabia*, in *Meinings Encycl. of Rel. and Ethic.*, t. pp. 609 ff seq.; Wellhausen, *Recht. van Vrieten*, *Meinings* . . . lei d. alt. Arabien, in *Wiener Zeitschr. f. Kunde des Morgenl.*, vols. vii and viii. — ~~see~~ materials in *Lehrl. d. Jav.* But in the time of Muhammad they were passing over into vague, impersonal gods. The Meccans asserted a kinship (*qarab*) between them and Allah (*Qur. xxxvii. 158*), made them partners of Allah (*vi. 100*), made offerings to them (*vi. 138*), sought aid of them (*lxvii. 6*). See further under Allah, pp. 102 above.

4. To ~~show~~ infer the existence of the 25th

renovation; his festival marks the return of spring.

The legend of St. George had become so prevalent long before the days of Islam, for we can recognize in St. George something like the dragon, a continuation of Heliogabrus slaying the Chimæra. Heliogabrus himself was symbolic of the Sun scattering the darkness or of spring driving away the rain and bringing winter.

The St. George of Islam is closely connected with the prophets Khidr and Elias; his festival falls on the 23rd April. Islam looks this day sacred to Khidr and Elias under the popular name of *Al-Khidr*. In the Ottoman empire it used to be a fixed day on which certain civil or military operations were carried out; for example, the departure of the expedition which used to make in the islands of the Archipelago, the departure of the troops of the imperial stables to the grazing-grounds, the assumption of summer liveries by the *Janissaries* of the seraglio and the court. In fact it was the day on which *Yusuf* began.

According to Muslim legend, St. George was martyred at Nicaea under Diocletian; during his execution the *angel* died and was resurrected *three times*. The legend is found in a considerably developed form in the Persian version of Ismail and always with the same motif: it is simply a series of deaths and resurrections. The saint makes the dead rise from the tomb; he makes trees sprout and pillars bend down; in one of his martyrdoms, the sky becomes dark and the sun only appears again after he has returned to life.

In the end St. George converts the wife of the monarch who was persecuting him; she is put to death. The saint then begs God to allow him to die and his prayer is granted.

(K. CARNA DE VAUX.)

QJIBH, in classical Arabic *Qiyas* (see *Frankel*), from *Qiyas*, p. 255 entry. The word in Northwest Africa has however two further special meanings.

1. *Qiyas*, plur. *Qiyasat* or *Qiyasat* means in the south of Algeria and Morocco a small band, which goes out on expeditions for purposes of plunder or of a holy war against a caravan or a body of troops. When the *Qiyas* consists of several hundred men, it is called a *harid*. The *Qiyas* carry on their operations from the Northern Sahara on the Niger valley throughout the Sahara to the South of Algeria and Morocco. They are composed sometimes of Tuaregs but more often of Berbers from the southern slopes of the High Atlas. The latter assemble on the al-Mulid plateau in the valley of the Wadi Gharia.

When the formation of a *Qiyas* is decided upon, the Tuareg who are to belong to it bind themselves together by an oath before setting out. Among the *Qiyas* there are the leaders of Algeria and Morocco: two mounted warriors are placed opposite one another, between these two men of religion run those intended for the foray, with a band of the *Qiyas* (Sahara brown) in their hand which they throw into the air. Each *Qiyas* takes with him some one who is to bring him back; this is usually a slave as a warrior who has already taken a sufficient part in several similar expeditions.

In the sandy plains of the Sahara, or in the sand hills the members of the *Qiyas* walk in Indian file so that the enemy cannot guess their number from their tracks. They also make all sorts of deviations. When they come to the place chosen for the ambush, they lie in wait. The attack is usually made by night or in the gray of morning. It is a fierce onslaught, a hail of shot mingled with the shrill wild yells of people shrieking like demons, while the rifles pour forth bullets. All the forces of the attacking party are concentrated on the first onslaught. The terrified animals can no longer be controlled and often stampede in all directions. Then begins the second part of the fight, in which the best horsemen of the *Qiyas* play the principal part in driving their exhausted opponents into the desert to die. It is mainly to put down the *Qiyas* that the French military authorities have instituted the corps of *Mahdists Sahariens*.

Géog. d'Alger*, 1900, p. 126 et seq.; St. Rochet, *Les Maîtres du Voyage au Sahara* (Alger, 1908), p. 55 et seq.; Augustin Bernard, *Les Conquêtes Algériennes* (Paris, 1911), p. 95 and 96; St. Bernard, *Notes sur l'O. Gharia*, in the *Bull. Soc. Géog. d'Oran*, Vol. XXX, p. 373; Deschamps, *Le Sahara algérien*, in the *Bull. Soc. Géog. d'Oran*, Vol. XLII, 1910 and more particularly p. 253 et seq.; A. Duval, *Notes sur les Qiyas*, in the *Bull. Soc. Géog. d'Alger*, 1904, p. 691 et seq. etc.

2. *Qiyas*, in accordance to the pronunciation in western Morocco, is a kind of feudal organization in the Moroccan Army.

Historical. The present *Qiyas* dates from the beginning of the reigning dynasty. Previously the various dynasties of North Africa had succeeded in power with the help of groups of the people whose political and religious interests were their own. Revolutions not only overthrew the ruling families but forced them to maintain their power by force of arms and spill their blood on countless battlefields. The great families, tribes and clans, who had accompanied the first ruler, became extinct. Left they should become dependent on the new ruler, who could not be relied on to be faithful to a dynasty they had not created, the subjects had to surround themselves with foreign mercenaries, who had no connection with the Atlas territory. The North African dynasties enlisted Christians, Kurds, Persians, negroes. Under the Banu Waqqas, the Kurd, Christian and negro guards were abolished and replaced by a guard composed solely of Arabs (*al-Shawshi*). This was composed mainly of the elements which had been introduced in West Morocco by the Almoravid ruler Yaqub al-Mansur (Ibn Hassan, Shihab, Kholi etc.) or of *Ma'rid* Arabs from the Moroccan country (Sah), Banu Amir, *Shawshi*, *Kholi*, etc.). The latter were quartered in the environs of Fez (Fez) and formed the corps of *Shawshi* (Oriental). The attacks of the Christians in the xvth century A.D. forced the ruler of Fez to place garrisons in the strongholds on the coast and these were given the name *shawshi* (garrison placed in a town), which was very soon to be transferred to the whole feudal organization of Morocco. But this *shawshi* succumbed to the attacks of the Portuguese and Spaniards, the rebellion

Barbers and those of a new Makhzen makhzen, which had been formed by the Salid Sharif of Sijilmas (1725).

When the Salid had become lord of the kingdom of Fes, then quartered the Akala of their *ghazis* in the garrisons of Fes, calling them the *ghazis*; they were afterwards transferred to the fortress in the *ghazis* and defense against the Khulud Akala of what had been the Maridakh. They then united the remnants of the *ghazis* of the Beni Waqila (Shahana, Sirwa, Ulas Mura, Ulas Djerir) with their own and placed them in the garrisons of Tailla and Maridakh. The *ghazis* were also enlisted and remained in garrison in the neighborhood of Fes. The Salid army, the *ghazis*, was thus created. As in the time of the Beni Waqila, it consisted of military customers of members of the makhzen who were at the call of their sovereign throughout their lives. They lived on estates which bore a kind of *tax* and were free from taxation. The highest officials were their rank.

But the Salid court became influenced by the Turks in the adjoining lands. In addition to the *ghazis* of Fes, the Salid wished to have a corps of *ghazis* in the European fashion by Turkish instruction. The *ghazis* of this corps, consisting of *ghazis* from Morocco and for the greater part of Sudan negroes, was only of any real value in the reign of Sultan Ahmad al-Ghazal (al-Mansur). While this dynasty was breaking up in the civil war caused by rival claims for the throne, Suljan 'Abd al-Malik b. Shakh wished to have a body of faithful troops upon whom he could implicitly rely and gave the *ghazis* most of the lands which they had previously only held in fee.

When Maly al-Bashir seized the throne in 1665 and with the help of Arab and Berber from the *ghazis* country founded the dynasty of Maly al-Bashir which still survives, he amalgamated his relations with the *ghazis* of Fes. His successor Maly al-Bashir, the greatest ruler of Morocco, gave the *ghazis* the character that it has retained to the present day. His mother belonged to the Arab tribe of Maghara, a division of the *ghazis*. He invited this tribe to come from the west end of Sijilmas and settled them as a *ghazis* who saw the lands of the *ghazis* of Fes. He recognized the negro contingent the members of which he had brought out with the help of the Salid Suljan Ahmad al-Mansur's register. They had to swear an oath of fealty on the *ghazis* al-Bashir's book; hence their name *ghazis* al-Bashir (slaves of Bashir, *ghazis* al-Bashir). The *ghazis* further consisted of the *ghazis* of Ulas Mura, Ulas Sirwa, Ulas Mura, Ulas Djerir, and the *ghazis* of the Beni Waqila (the *ghazis* proper, Maghara etc.) and *ghazis*. These were the four makhzen-tribes and together formed the *ghazis* Makhzen of the history of the *ghazis* is that of the domestic history of Morocco; indeed it may be said that their history is that of the revolutions of Morocco. In the reign of Maly al-Bashir's successor, it was the *ghazis* that divided the fate of the ruler. The four *ghazis* tribes acted just as united their individual interests. From 1725 to 1757, in the brief space of 32 years, 14 Suljans were enthroned, and deposed or slain by them, in consideration of the presents (*ghazis*) they received, in 1757

in the death of Suljan 'Abd al-Malik b. Imshir, who had himself been twice deposed and restored again, his son Muhammad succeeded him. Under his son, the *ghazis* were kept under control. He broke the power of the *ghazis*, by dividing them up and sending them to govern the various *ghazis*. To counteract the influence of the *ghazis* in Tailla and the plain of Maridakh, he enlisted sections of the tribes of this plain in the makhzen — Maridakh, Sahana, 'Abda, Ahmar and Harbil — Each of these tribes had to send two *ghazis* and their retainers to the *ghazis*. These detachments were released from these tribes, entered the makhzen of Maridakh, to which they belonged, received the pay of other *ghazis* and were freed from taxes.

Under Suljan Yaqub, son of Muhammad, land-ordinances again broke out, followed by the weak character of the ruler. He was assassinated and the struggle for the throne of Morocco began again, which became the playing of the *ghazis* tribes. Finally about 1797, Maly al-Bashir succeeded in winning his way to the throne and establishing his rival Maly al-Bashir, who had been chosen in Maridakh. While he was on a campaign against the Berbers in the south, the *ghazis* entered a great rebellion against him. The *ghazis* took his side against the rebels and seized the opportunity to plunder Fes. Maly al-Bashir was, however, but on his death his successor Maly al-Bashir was proclaimed Suljan in the *ghazis* in 1822. The latter was almost overthrown by another rising of the *ghazis* and had to flee to Tailla in Maridakh, the better to be able to control the tribes. Not even in the north of his kingdom, a rising of the *ghazis*, the conquest of Algeria by the French and the war of his representatives 'Abd al-Bashir against them, forced him to return to Fes. He wished to take the field in person against the French. But after his defeat at Tizi, he recognized his unequal to European arms, his *ghazis* was, and resolved to have an army modeled on those of Europe. His successor Maly al-Bashir carried out this plan by the edict of the *ghazis* 1277 (1856 July 28th). The organization of the new army was that many experienced finally entrusted to a body of French officers.

Present State of the *ghazis*. The *ghazis* of the present day still consist of the *ghazis*, *ghazis*, *ghazis* and *ghazis* with the full makhzen-tribes of the plain of Maridakh (Ahda etc.). The tribes still have only the use of the land occupied by them, except the *ghazis*, who have obtained the domain of most of their lands; and the *ghazis* almost all of whom have land around Meknes (Meknes). The *ghazis* are divided into regiments of 500 men each, called *ghazis*. At the head of each *ghazis* is a *ghazis*, a kind of colonel. Below him are two *ghazis*, a commander of 100 men, each of whom have 5 or 6 *ghazis* below them who are subordinate officers commanding 20 men. The private soldier of the *ghazis* is called *ghazis*.

The members of the *ghazis* can attain to the highest positions in the makhzen. The *ghazis* still retain a special position, from their rank above all others the *ghazis*, a kind of pages, who are employed in the palace of the sovereign. The *ghazis* have the right to call themselves *ghazis* of the Suljan. The tribes belonging to the *ghazis* are each commanded by a *ghazis*, except

DJIZYA (A.) "tribute, poll-tax", the name given in Mahomedan law to the indulgence-taxes levied on the *ahl al-ahkām*.

1. The Theory of the *djizya* in the Fifth.

In the *ḥikmah*, the *djizya* is discussed in connection with the only war (*ḥikmah* q. v. p. 1041 ff.) While pagans only have the choice between life or death, the possession of a scripture (*ḥikmah al-ahkām*) may obtain security and protection for themselves, their families and goods by paying the *djizya*. This doctrine is founded on Koran ii. 191 where it is laid down: "Fight them, that believe not in God and the last day and who hold not as forbidden what God and His apostle have forbidden, and do not profess the true religion, those that have a scripture until they pay the *djizya* in person (ḥikmah al-ahkām). Relying on this passage the Fifth regards the *djizya* as individual poll-tax, by payment of which Christians, Jews, Magians, Sabians or Samaritans make a covenant with the Islamic community, so that they are henceforth not only tolerated but even have a claim for protection. Certain Christian groups, like the Nestorians and the Christians of Nubia occupy a special position and do not pay *djizya*. Only adult males in the full possession of their physical and mental faculties and having the *ḥikmah* to pay *ḥikmah* liable to the tax. Women, children and old men are exempted, as are if not waged in them. Blind men and cripples only pay when they are wealthy; poor men and beggars are not expected to pay. Monks are exempted, if they are poor, but if their monasteries are wealthy, the superiors have to pay the tax. Slaves also are exempted. Absence of this mild treatment of the poor and weak, there is a corresponding strictness with the wealthy and *ḥikmah* is to be taken that no one who ought to pay escapes. Collectors are therefore particularly warned not to levy round sums on communities on a basis of their numbers alone. How to deal with the tax in the case of a *ḥikmah* who becomes a convert to Islam, or one who dies in the current each-year is a question of *ḥikmah*.

The *djizya* should be paid in money but it may be paid in kind, e.g. in garments, cattle or even services that were, and still are, done for a natural death (*ḥikmah*), or *ḥikmah* legal payment; the proceeds of these sale may however be taken. The normal tax at first was 1 *ḥikmah*. This later became the minimum. In countries where the standard was a silver one, it was the equivalent, 12 *ḥikmah* for *ḥikmah* (q. v. p. 1041) in better circumstances the tax was raised to 2 *ḥikmah* or 3 *ḥikmah*, and for such a *ḥikmah* or 12 *ḥikmah*. According to Abd. Qasir, from whom most of these facts are taken, money-lenders, dealers in cloths, landowners, merchants and physicians were considered rich, while widows such as *ḥikmah*, *ḥikmah*, widows and *ḥikmah* were counted poor; he gives no *ḥikmah* of the middle class. If a man could not pay his *djizya*, he was not to be forced to do so by corporal punishment (*ḥikmah* exposure to the sun, working with oil) but only by imprisonment. According to the verse which introduced it, the *djizya* was to be paid "in submission" (*ḥikmah al-ahkām*), which *ḥikmah*, no doubt correctly, explained as to the dominion (*ḥikmah*) of Islam, which the *ḥikmah* were under Qasir, on the authority of this passage, demanded a very humiliating method of paying it and it is most probable

that the degrading prescriptions regarding dress etc. are only interpretations of this passage. The income from the *djizya* was paid into the state treasury (*ḥikmah al-ahkām* q. v. p. 598 ff.) and with that from the *ḥikmah* (q. v.) the land-tax, formed the revenue from the *ḥikmah* (q. v.) which belonged to the whole community.

2. The History of the conception of *djizya* in Practice.

Djizya originally meant the collective tribute levied on conquered lands. The Arabs everywhere left the administrative conditions which they found, unchanged and regarded the revenues of the provinces as their *djizya*. The distinction which later became clear between *ḥikmah* as a poll-tax and *ḥikmah* as a land-tax did not at first exist. Some authorities frequently speak of a *ḥikmah* as a poll-tax and a *ḥikmah* as a land-tax. The revenue from the *ḥikmah* is even quite exactly called *ḥikmah* in allusion to the passage quoted from the Koran. For example, in the Egyptian papyri of the first century A. D. besides the *djizya* (*ḥikmah*) as the principal tax in gold, only the payment in kind is mentioned, which cannot be dismissed here. According to the Arab view, this *ḥikmah* was a poll-tax; for on the conclusion of treaties of occupation, a hypothetical number of inhabitants and not the area of arable land was taken as the basis for estimating the tribute. Now a poll-tax existed before the conquest of the conquered lands, Sassanian and Byzantine (*ḥikmah*, *ḥikmah*) but the *ḥikmah* source of revenue and hence of the tribute was the land-tax, which bore the Aramaic name of *ḥikmah*. This term was identified with the Arabic *ḥikmah* in *ḥikmah* (Koran, ii. 191, *ḥikmah*) and from the 'Abbasid period was in general use in the non-Arabic provinces also *ḥikmah* = 'revenue', 'income from land-tax' is interchangeable with *ḥikmah*, even in the oldest literature that has survived to us. If it was the income from the tribute that was emphasized, it was called *ḥikmah*, but if one were thinking more of the tribute paid by those who had been conquered by Islam, the *ḥikmah* was probably *ḥikmah* was used. With the consolidation of Arab power *ḥikmah* gradually became the term applied to the land-tax, while with the gradual conversion to Islam of the subjected peoples came to be levied on Muslims also, and then lost its tribute (*ḥikmah*) character. The *ḥikmah* *ḥikmah* was replaced by the individual poll-tax which Islam found already in existence and which was of course levied on non-Muslims only. In the early literature and in Egyptian receipts for the payment of the poll-tax the term *ḥikmah* (plur. *ḥikmah*) was used, which became synonymous with *ḥikmah*. This *ḥikmah* or *ḥikmah* was counted *ḥikmah*, of this or that year, because the total income from the *ḥikmah* was also called *ḥikmah* (cf. *ḥikmah*). Thus in the course of a century and a half more the terminology of *ḥikmah* and *ḥikmah*, although the Fifth seems there as having existed from the beginning.

On the practice in ancient times we really have only satisfactory information as to the custom in Egypt. After payment one was given a *ḥikmah* count the work, but the Coptic Muslims introduced regular receipts called *ḥikmah*. Numbers of these have survived but they have not yet been thoroughly investigated. Egypt is said to have had levied on it at the conquest a tax of 2 *ḥikmah* a head and as a matter of fact according to the

Bacht, *Reizen en Landsovertochten*, p. 447 et seq., Norderhol, *Schieda und Soenda*, Chap. 2, *Soenda*, *De Oost-Indische Tijdschrift*, 1879, p. 80; de, *Atina* (Lampang 1884), p. 122—176; G. H. Hamacher, *Vergesamte Geschiedenis Soenda* (transl. by Setzer, at Lankum, Batavia 1903, 3 ed. 1912).

DJOKYAKARTA or Djokya, also Yogyakarta, the name of a sultanate in the centre of Java, with an area of 565 sq. m. and in 1905 a population of 1,100,814. Muslim Javanese, 5360 Chinese, 550 Arabs, 86 other Asiatic foreigners and 2340 Europeans; it is also the centre of the sultanate (including this sultanate and of the capital of both (1905: 79,567 inhabitants).

Djokjakarta, with the principalities of Paku Alam, Surakarta and Mangkunegara, forms the so-called "Vorstenlanden", all that is left of the once great Javanese kingdom of Mataram, which arose (c. 1500) out of the ruins of the Hindu kingdom of Majapahit, which was destroyed by the Muslim rulers in the early 16th century. Under Surong Pajene in the first half of the 17th century, it had extended over almost the whole of Java. Civil wars about the succession to the throne, the intervention of the Dutch East India Company and of other allies in 1677, like the Malacca and Makassar, finally brought about the ruin of the kingdom and left it a dependency of the Netherlands. In 1755 it was divided into Djokjakarta and Surakarta.

It may be taken as typical of the despotic monarchies which used to exist in the Indian Archipelago, where Hindu influence had made itself strongly felt.

The Sultan grants the land to his subjects for cultivation on payment of a tax (*padik*) of half the rice produced from the irrigated fields: from the middle of the 18th century on, when was also paid a third of the rice from dry fields and of other produce. The ruler had further the right to levy taxes arbitrarily on the occasion of a birth, christening, marriage, death, or the building of a house etc., in his family (*sakda suraw*). Usually the people were obliged to render personal service to him (*gajawana*). The holders of appointments receive from the rulers along with the land, the right to raise those taxes from those who live on it.

The government was carried on in name of the Sultan, by a regent or *pangreh*, who in Djokjakarta has always borne the title *daulat*. He is appointed by the Sultan with the approval of the Dutch authorities, confirmed and paid by the latter. With the officers of state (*patih*) outside the palace or royal town he forms the *kepatihan* or governing body and is the second in the kingdom. The crown prince, whose title is *pangreh adipati* forms with him the *kepatihan* in the palace, which the members of the royal family has authority over. They live in the royal town, the *kraton* of the Sultan, which is surrounded by walls. The third governing body in the state is the *pengantun* or Muslim clergy.

In terms of the treaty with the Dutch government, the political power of the Sultan has been transferred to the Dutch authorities. Besides its political constitution as a sultanate divided into three main divisions, the present arrangement

of judicial institutions in the Sultanate best emphasises this fact. In 1839 a supreme court was instituted with the Dutch Resident as president and the Regent and other high Javanese officials as members; the powers of the previously important native *Samaru* (court of the clergy) and *Pradik* (Criminal Court) were transferred to it. In the same year a court for Europeans was instituted with the Resident as president and European members. The third native court, the *Datara*, for civil cases and disputes with natives, survives in Djokjakarta to the present day. In 1903 the administration of the penal code in Djokjakarta exclusive of the *kraton* and in the residences outside the "Vorstenlanden", has been organized and thus transferred to European authorities.

In Djokjakarta as well as in the other "Vorstenlanden" we find the typical Javanese and his society; on the one side is a highly developed aristocracy around a royal house from which it has sprung and on which it is still quite dependent as a ruling official caste, on the other, the poverty-stricken masses, an agricultural population on a very low level, which regards the class that exploits it with awe and reverence. The most remarkable feature of Javanese society is the strict formality, observed in the smallest detail, which marks the intercourse of the latter with the former in all affairs. As a result of their environment, the parasitical nobility has not developed any serious conception of life nor any kind of activity but only the tendency to satisfy their passions; there is no inclination among the down-trodden and exploited people to raise themselves to a higher level; they are content if they obtain, by legal or illegal means, the necessities for life, festivity, opium-smoking and gambling. As elsewhere among the native population of Java, society here is entirely ruled by its beliefs. But it is notable exceptions, qualified by Hindu and Mohammedan ceremonial, that guide the Javanese in his daily life. The practice of *halal* teaching in the "Vorstenlanden" and in Djokjakarta has the following peculiarities: the ordinary Javanese does not adhere strictly to his religious duties with regard to *halal* (permitted) and *haram* (forbidden) and the demand that assemblage in the mosque, the call to prayer does not involve compliance of the prescribed *adzan*, but also of the beating a *gong* drum (*gong*) in the outer gallery of the temple; there are no minarets in Djokjakarta. This sultanate is one of the areas where *halal* and *haram* are rarely and very irregularly paid. Feasting is an extremely practiced by the masses and only observed by the devout and the *ulama*. The *padik* however, has a great attraction for them, and many from Djokjakarta go to Merak without seeking that their families can obtain with them.

In Djokjakarta also the circumcision of boys and girls is regarded as the first duty of a Muslim.

In the "Vorstenlanden", including Djokjakarta, the great festivals of Mawlid, 'Id al-Fitr and 'Id al-Azhar (*raja*, *raja*, *raja* and *raja*) are observed, more than in the rest of Java, with ceremonies and rejoicings. The first two derive their importance from the fact that the Sultan and his family receive their land-tax (*padik*) then. For six days before the *gong* drum music is played on the *gong* and religious music (*halal*).

and) take place. The *gandig* *gandig* is regarded by Europeans as the Muhammadan New Year and visits of congratulation are paid.

In the nights of the 21st, 23rd, 25th, 27th and 29th *Kamulan*—religious meals (*konfimen*), with recitations of the Kor'an, are held in a spirit of rejoicing even in the little villages.

DJOLOF (Djolof) was the name of a kingdom, that no longer survives, which included the modern Djolof, Walo, Cayor, Baol, Sine, Salum, Kine and provinces of Kaolack adjoining the coast of Fouta.

Walo & ~~Walo~~ of the language spoken in these districts and also of the people who speak it.

The modern Djolof (14°—14° N. Lat., 14°—16° W. Long. of Greenwich) is bounded on the north by Diar and Fouta-Toro, in the east by Fouta and Bondu, in the south by Sine and Niamou, in the west by Diambour, Baol and Cayor. Djolof has no river which its boundaries and is one of the most sparsely populated districts in Senegal; but it possesses fine pastures and groves of guinea. It has always been a place of refuge for agitators and rebels who, when defeated and expelled from their own country, find an asylum here. Tradition tells of a pious Muslim named Bokhar (Abu Bakr) a *Qa'ir*, also called Abu Bakr, of the family of the Prophets, who came from Mecca about 600, settled in Senegal and preached Islam. He married the daughter of the *Siaka*, Fallata Sal, who bore him a son Ahmadu, who afterwards became ruler of the great kingdom of Djolof under the name Ndiallanc Ndaye (1212—1236). From him was descended the ruling family of Djolof and the title *Bar du Djolof* remained in it for three hundred years. The dissolution of this kingdom is placed about 1566. Long before this however, Europeans had become acquainted with Djolof. In 1482 Pêre Fernandez discovered the river Senegal and captured four Walo, whom he brought to Lisbon. Ca da Mosto, who resplend the *Siaka* (Marrakech) in 1483, gives a detailed account of the king of Senegal, *Siaka* (Bar du Djolof), of the religion of the negroes, their manners and customs, and the products of the country; as to the *Siaka* and *Barboz* (of Sine), he tells us that they were beyond the authority and realm of the king of Senegal. Legend agrees with the Portuguese historians regarding Amiri Diolan, brother of the *Bar du Djolof*, who went to Portugal in 1482.

The first mention of a French voyage to the mouth of the Senegal is in 1558, when traders from Dieppe were very well received by the Senegalese. From 1638 dates the first permanent French settlement at the mouth of the river. Lamoignon tells that an ambassador from the *Diola* and another from the *Bar* were received there and that French boats used to go for timber in the kingdom of *Siaka*. The arrival of the *Diola* and the *Bar*. Later in 1677, Lamoignon

signed treaties and concluded treaties with the chiefs of this country, by which France was guaranteed, on payment of customs, a monopoly of trade in those regions. Two years later, he advanced into the interior, forced the chief of the *Diola* to sue for peace and compelled the *Diola* of Cayor to accept his terms; he imposed new treaties on these chiefs, which assured to France possession of, and sovereign rights over the coast between Cape Verde and the *Guinea*, for 6 leagues inland, as well as a monopoly of trade, without paying customs. About 1682, Lamoignon gives some details of the Walo, their occupations and their dealings with the Arab merchants.

In 1685 La Caille was visited by the chief of the Walo; in the following year, he sent his agents to make a treaty with the *Bar du Djolof*. At this time, he tells us, the *Diola* had taken advantage of the chaos, reigning among the Walo, to kill the chief, and drive the *Diola* and *Bar du Djolof* from their dominions; the Walo however, ultimately succeeded in driving the *Diola* of the Moorish yoke. In 1701, by order of the Senegal Company, *Bar* again began negotiations with the *Diola* of Cayor. Adamson's journey occupied the years 1740 to 1755 and, after spending five years in Senegal, he brought back a mass of documents which he used for various works. Ponce de la Rivière in 1763 and 1765 negotiated the creation of the peninsula of Cape Verde with the *Diola*; in 1785, M. de Koyentigny signed a treaty of alliance with the *Bar du Djolof*. In the following year came to an agreement with the *Diola* of Cayor, by which in consideration of an increase in the customs the latter renounced all claim to the coast; the creation of Cape Verde was renewed in 1787 under the governorship of Geoffrey Villeneuve, who in the year visited Cayor, Djolof, Baol and Sine. Roubili had made a journey through the lands of Cayor and Djolof in the preceding year. In 1819, Walo was ceded to France, but attempts to cultivate it failed, since 1861 farmers began to develop the cultivation of cotton in these lands. Lamoignon arrived in Senegal as governor in 1854. In 1855 and the three following years he visited a number of *Bar du Djolof* and their allies, the *Diola* and Walo; in 1858 the *Diola* and the *Bar du Djolof* and for peace in 1856 Lamoignon subdued the *Diola*; but in 1859, after several public measures, he signed treaties with the kings of Baol, Salum and Sine. The French had not yet made any treaty of peace with Cayor. A desire to protect traders and to establish a telegraphic line between St. Louis and Kaolack led them in 1859 to enter into negotiations with the *Diola* *Diola*. At his successor Makoula repudiated the agreement, *Bar* was disposed in favour of Makoula whom the chiefs of provinces, including Lat-Dior, recognised as *Diola* of Cayor in 1861. Lat-Dior however soon afterwards collected his adherents and attacked Makoula; force had to be used to defend the *Diola* elected under French influence. Lat-Dior was defeated in several engagements; in 1862 driven out of Baol and then out of Sine, he took refuge in the *Bar* country and found an ally in the chief Makoula. The incompetent Makoula was deposed and the governor of Kaolack invested with the green mantle chiefs chosen by the French in Cayor, but new difficulties arose with Makoula, then with Ahmadu Shakh and Lat-Dior.

In the reign of the *Dur du Niger* Bakay Toun Bhehky, a paramount of Fula, called Saka, ranged the eastern provinces of Haubi; at the request of Lat-Dior, he invaded Djolof in 1803. Heated the *Nor* at M'pessa and threatened Cayor; his army was routed near Niogo, in 1807, while about to invade Sine, he was defeated and slain at Niogo.

Hardly had he disappeared, when the Tiguas chief Abimadu Shakh made an alliance with Lat-Dior and attempted the invasion of Cayor, their followers were defeated at Logo in 1809. In 1817, the government of the colony recognized Lat-Dior as *Dur*. When Abimadu Shakh with his Tiguas again invaded Djolof and Cayor, an expedition, supported by Lat-Dior's army, routed the Mansa's army at Blandi and he himself was slain at Coki in 1825. At first relations with Lat-Dior were quite cordial, but in 1832, the construction of the railway from Dakar to St Louis raised new difficulties. Lat-Dior, having shown signs of hostility, was proclaimed deposed along with Samba Lamine, whom he had elected *Dur* in his place. Through French intervention his nephew Abimadu Nigone Fall was recognized as *Dur*; Samba Lamine attempted to defend his claims but was defeated; but as Abimadu Nigone had not been able to win the sympathies of the people of Cayor, he had to abdicate and Samba Lamine succeeded him in the meanwhile the Dakar-St Louis railway was completed. In May 1880, a dispute broke out between the *Dur du Niger* 'Ali Bari and the *Dur*; their armies met in Djolof and 'Ali Bari was victorious. The governor lent a heavy hand on the *Dur*; his life constant; Samba Lamine refused to pay and rebelled; he was killed at M'pessa.

Lat-Dior claimed the succession and attacked a detachment of Spanish at Fekkele he was slain in the battle that ensued. In consequence of his action, Cayor was divided into its provinces and in 1880 finally entered a period of peace and prosperity. French intervention had to be equally effectively enforced in Haubi and Sine. The deposition of the *Dur* of Haubi in 1890 and the disarmament of the Fulas in 1891 definitely established French authority in the region which was divided in 1893 into two provinces. In 1894 on the death of their *Dur*, Sine and Saloum also were divided into two provinces under French control.

At the present day the Wolof constitute the predominant element and by far the largest in point of numbers (last census, 107,250) of the population of Senegal in the north in Haubi, where they form almost half the population, their neighbours are the Toucoules. In compact groups, whose unity is hardly affected by the presence of a number of nomadic Fula tribes, they occupy Walo, Djolof, the countries formed on the dismemberment of the ancient Cayor kingdom and the Atlantic shore from Dakar to the Cap-Haï. In most of the parts on the Senegal and the Niger there is a quarter of Wolof tribes.

The Wolof are tall in stature (average is 5' 8"); their skin is an ebony black with a bluish tint except the palms of the hands and the soles of the feet and the inside of the limbs, and the head of the neck which are somewhat lighter. The skull is dolichocephalic, the index being 70 in the male and 73 in the female, and the orbital especially 149.5 (Mortensen); and the prognathism often very marked. Their hair is thick

and woolly, the lips thick and the incisors almost vertical; the teeth are immovable and the hands long; but the lower limbs are thin, the calves little developed, and the instep almost non-existent. The Wolof woman is also tall (average 5' 4"). In her the spine is very curved and the breast pendulous; on the whole her thicker lips, darker nose and protruding lower jaw render her an inferior type to the man.

Arms and weapons are very common; these are various from the Korfa enclosed in a leather case, or sometimes a piece of cloth, over which magic words have been repeated, placed in the butt of a bow or in musket-shells, lances, etc. He who wears one is safe from the malice of sorcery, from sorcery, from the evil eye and need not fear bullets or evil incantations, while he can become a good shot. The women want them, real or imitation, in their hair, as ornaments.

The Wolof live in huts in the form of a beehive, the lower part, which is cylindrical, being made of reeds (Djolo) or clay (Walo); the conical roof is of reeds. The only opening of the slope; sometimes however, there are windows of the size of a man's hand enabling one to see what happens outside. The cottage is divided into two parts by a wall of earth or reeds; in the first apartment the occupants eat, sleep and receive their visitors; the other apartment is used as a kitchen and during the wet season as a kitchen. One family occupies several huts, which are usually grouped at a corner of an enclosure (dara) surrounded by a hedge of irregular shape of branches, reeds and posts; in another corner a very small but forms the henhouse; at a little distance are pens in which the cattle are tethered; the doors of the Wolof are usually grouped so chance directs and not according to the wishes of inhabitants; at the entrance or in the center of the village is the palaver tree under which the business of the village is discussed and idlers come to smoke and chat. The furniture includes the bed, which varies in shape, wooden boxes, trunks in which clothes and objects of value are kept; on a table are placed the calabashes for milk; arms are hung on the walls; in the second apartment are the wooden mortars and pestles for grinding millet, calabashes, a few earthenware pots and mats. The Wolof live chiefly on millet; they eat it cooked in water (gued), or after pounding it, the women make bollees (derra) or soup (laga) of it; these are also made of maize or rice; earthenware are eaten raw, boiled or roasted; potatoes, manioc, the fruit of the baobab are also eaten; in Walo, a good deal of fish is consumed.

Millet is the staple food grown by the Wolof; the principal article of export is the earthnut (in 1910: 227,300 tons). The *Walo*, manioc, and vegetables grown are consumed in the country; the Wolof country also yields a small quantity of rubber, which comes from the Niayes country, and some gum.

The Wolof are not cattle-rearers; they are fairly skilful smiths, cobblers and weavers etc. When a woman is enceinte, she covers herself with *gala* to protect herself against magic; as soon as she feels the pains of travail, all the men and male children are sent out of the house; the woman shuts herself up with her mother and experienced women friends in the hut, which is kept dark; no midwife is employed; the birth

taken place in a crouching position; the umbilical cord is broken and not cut with some sharp instrument. The young mother only takes light food (milk, rice); for seven days she does not appear in public or make hot toilet. On the seventh day after its birth, the child is given a name and its bath is not for the first time; a feast is held and presents made to the child and the mother.

Among the Wolof only the boys are circumcised. The rites are less strictly observed than among the Fula for example. This circumcision may be performed twice a year; it is performed at a relatively early age (10 to 12 years); the operation is performed in the village itself, the operation is not necessarily a public one; a youth, nor is the newly circumcised boy forbidden to enter the village etc. During the operation, which is performed in the morning, dimly before sunrise, the boys join not betray the slightest sign of pain; experienced individuals bindage them; then all hurry out the village and take a long walk in the country. On their return, the people of the village come to meet them and clothe them in the *bañ* worn by circumcised persons, a long shirt of black cloth with a white seam at the foot of the sleeves and a head-dress of black cloth tied round the neck. A piece of unbleached cloth thrown over the shoulder is used to heat off those who come too close; they are all furnished with a stick with which they chase the birds which the newly circumcised are allowed to kill and take away. Till they recover, they eat and sleep with a guardian who watches carefully that they all begin and finish a meal at the same time. He forces them to take many baskets of coarse millet (*niññ*) *niññ* makes them dance and sing; every week these boys are motion outside the village. When completely cured, they put on a head-dress higher than the first, but they only discard their *bañ* long after their recovery; this *bañ*, in which the prepupa that has been cut off, is kept, is used as a *gris-gris* and protects from bullets.

Marriage takes place between people of equal status; a man may take a wife from his caste or from a lower. Marriage is preceded by betrothal (*kañ*); when the *niññ* is ready, the girl goes there accompanied by her girl friends. At the door of her *niññ* abode, the husband's sister offers her millet-sheeds tobacco and pistachios.

Polygamy is regulated by the Kor'an; the first wife has authority over the others, and is head of the household; questions of divorce are laid before the *qadi*; according to the *qadi* is decided, the wife gives up or keeps the dowry *gand* by her husband.

When a Wolof dies, his body is washed, then wrapped in a piece of white cloth; the internment takes place almost immediately after death. The grave, which is very narrow, is dug by those present, who are careful not to reopen an old grave; the body is placed in it on its right side; graves are turned towards the east. On leaving, the mourners are careful not to turn back. Seven days later, the family prepare *niññ* for distribution to the poor and to the pupils of the Kor'an schools, who pray for the deceased.

A woman, who becomes a widow, wraps herself from head to foot in a black cloth; she wears this single garment without washing or changing it and paying the least attention to her toilet for four months and six days, at the end of this

time, she goes out of the village by night, casts off her garb of mourning, washes herself and puts on new clothes. A widow does not wear mourning.

The unit of society is the family, i.e. a group of individuals having a common ancestor. Descent may be traced through the male line (*gand*) or the female (*niññ*). Each *niññ*-family has a name but the Wolof call themselves and salute one another by the clan-name they receive from their fathers.

Besides this division by families, there is a classification by castes; the first, and the largest in numbers, is that of the *freemen*, or *freemen*, who were divided politically into nobles and commoners; next comes the caste of *ministers* which is chiefly composed of artisans, smiths, goldsmiths, tanners, cobblers, musicians and singers, weavers, makers of boats and wooden vessels and lastly the *griots*, the most despised of all. The *griots* were on the lowest rank of the social scale.

There was a hierarchy among the noble families, some furnishing the chiefs of districts, others the chiefs of provinces, the directors of kings. To be eligible for election as *chief*, a man had to belong to the royal family in the male line and to the mother's to one of the three princely families. In *Diolof*, rights were only transmitted to the male line while in *Sine* and *Saloum* power remained in the hands of a family by female descent.

The Wolof language is spoken in *Diolof*, *Walo*, *Cayor*, *Bole* and *Sine-Saloum*; it is the language usual in commerce throughout Senegambia. Many of the Fula of *Diolof*, of the Moors of *Walo*, of the Serere of *Sine* and of the *Jaobe* speak it also; the Wolof and Serere have a connecting link in the language of the *Fula*.

The sounds *h*, *g*, and *z* of *Fernand* are not found in Wolof nor the separated clicks peculiar to the Serer and Fula languages. *f* and *s* are usually palatal, *h*, *z*, *g*, *z* may be nasalised; *t* and *d* are also found occasionally.

The conjugation of the verb distinguishes the principal tenses, past, present and future but has very few secondary voices. The use of various moods, and the many derivatives from the nouns give the Wolof language considerable wealth of expression and a certain energy.

The Wolof employ a quinary notation. Their literati are fond of talking Arabic, and can express themselves more or less purely in literary Arabic.

*The *Diolof* must have converted the Wolof to Islam, partially at least, at quite an early period. In the 13th century, *Ca da Mosto* found their chiefs following the Muslim faith which however they soon lost through contact with Christians. Nevertheless the knowledge of one God, whom they called *Falla*, was wide spread among the masses who remained heathen; the pagan Wolof only revered their family spirits (*niññ*), whom they regarded as intermediaries between them and this distant God.

Although they had relapsed into paganism, the rulers of the lands on the Senegal appear to have always been very tolerant to Muslim, even giving the *Muslims* concessions, in which they could settle and form communities which often took their name. The *loquacious* *niññ* of *freemen*, exploited by the warlike and pagan *Tiedou* abandoned *felah* slowly before the *senegalese*

count: we know with what repugnance Fat-ḥim adopted Islam. There are 3000 Catholics among the Wāḥi, they are particularly numerous in Gūḥ, Dabur and St. Louis. At the present day, the great majority of the Wāḥi are Muslim, to each village there is a place reserved for common prayer (*ḡāḥa* = *ḡamā'*), and one or more *Masjids*, generally Wāḥi in *ḡamā'*. The Muslim Wāḥi are very strict as regards fasting and fasting; they observe the fasts of *Tashrīq* (*ḡamā'*), and of *ḡamā'* (*ḡamā'*); Jewish rites may be traced in the festivals that have supplanted pagan feasts. The Muslim Wāḥi readily join religious brotherhoods, while the *ḡamā'* are mainly *Tiḡāni*, the Wāḥi are on the whole *Kāḡāni*. It is among the Wāḥi of *ḡamā'*, *ḡamā'*, *ḡamā'* and *ḡamā'*, that *ḡamā'* *ḡamā'*, the head of a nucleus was recently founded, has found some of his adepts, the *ḡamā'*.

QUBAIL, a town on the coast of Syria between Latakia and Hama. The modern holy city of Adana had lost much of its importance, by the time it was conquered by Umayyad and Abbasids, the name of Abu Sufyan. It was incorporated into the *ḡamā'* of Damascus and like the other coastal towns had a small garrison till the Fatimid period and was the home of a number of Muslim scholars. In 1105 it was taken by the Crusaders, and in the next of a *ḡamā'*, until the king of Jerusalem, Qubail regained a certain importance; its little harbour was restored and the strong

fortress built, the remains of which still show the administration of the ruler. Qubail was captured by Salih al-Din, but restored to the Frank by the *ḡamā'* in payment of 2000 *ḡamā'*. Apart from this brief interval, the town has always been under Muslim rule, but it has never been played a part in history and its importance has gradually diminished. At the end of the 12th century, it passed with the lands attached to it, into the hands of the Banu Hamud the Muzahid family, calling in Lebanon, who remained in the 13th century, when it had sunk to be a wretched little village. Since it became the seat of a *ḡamā'* in the autonomous district of Lebanon, it has become a little better; but as it has no harbour and the district around it confined and unproductive, it can never attain any considerable development. The population is about 2000, almost all of whom are Maronite, except a few Muslim families.

Bibliographie: Yāḡū, *Al-Djubbāi* (at Wāḡ), II, 32-33; Ibn Khayyāḡ, *ḡamā'* (at Wāḡ, Latakia), p. 196; Ibn Khayyāḡ, *ḡamā'*, p. 17; Bakhārī, *ḡamā'*, p. 126; Kanan, *ḡamā'* de *ḡamā'*, p. 164; Tawḡ al-Shiddāḡ, *ḡamā'* al-Djubbāi p. 166-167.

QUBBĀ (A.), in Egypt *ḡamā'*, a garment of Syrian origin, with narrow sleeves (*Bakhārī*, *ḡamā'*, *ḡamā'* by Haddad and Marḡal, II, 321), sometimes lined with cotton, worn under the *ḡamā'* (p. 17). In Egypt it was worn over the *ḡamā'*; it was a long robe with short sleeves, worn in winter with fur. In Spain, in the transition period, *ḡamā'* of book silk were worn. In *ḡamā'* the garment, which is made of light cloth or silk, is worn over the *ḡamā'*; during the hot season it is thrown over the shoulders. Women wear a *ḡamā'* of cloth, velvet or silk, embroidered with gold or coloured silk, narrower than the man's. The word has passed into the Romance languages: Spanish *ajuba*, Italian *giuppa*, French *jupon*.

AL-DJUBBĀI, Abū 'Alī Muḡammar b. 'Aḡā al-Warrāḡ, a native of Qubbā in Khuzistān, one of the leaders of the Mu'tazilites. He studied with Abū Yaḡūb Yūsuf al-Shayḡīn, the head of the Baghdad school of Mu'tazilites and afterwards became one of the chief champions of this school himself till his death in 303 (915-916). He composed a work on the fundamental doctrines *ḡamā'* and wrote polemics against al-Balāḡī (q. v.), al-Nazzām (q. v.) and others. He also often disputed with his pupil al-Aḡḡā, who, when he had abandoned Mu'tazilite doctrines, published several pamphlets against his teacher (given in *ḡamā'* *ḡamā'* *ḡamā'* *ḡamā'*), notably a refutation of al-Balāḡī's work on the fundamentals. No trace of these works has survived, however, nor of al-Balāḡī's commentary on the *ḡamā'*, which he wrote in the dialect of his native town (Qubbā), and whose text is now in a deplorable condition on philological grounds.

Even more renowned than the father was his son Abū al-ḡamā' al-Warrāḡ, who died in 321 (933) and whose followers are known as

Kahghamīya. Another name for them, given by al-Bughdādī, al-Dhahabīya, see above p. 936b, seems rather to be a term of reproach and is less usual. One of them was the celebrated Rūyid vizier Ibn 'Abd al-Qāṣ, so that at that time almost all Mahādites bore the name Abū Ḥāshim as their Shāikh. Only the titles of his works have survived, but we know his views fairly accurately through the polemic agnosts: them by his opponents. His theory of conditions or modes has particularly contributed to make Abū Ḥāshim's name celebrated. We cannot go fully into the doctrines of the al-Djubbāt, father and son, here, and must therefore refer the reader to the *Bibliography*; it may be sufficient to note that al-Djubbāt regarded the attributes of God, as identical with his being and, in consequence, practically denied their existence. Abū Ḥāshim sought to reconcile this teaching with orthodox doctrine, by explaining these attributes as conditions (ḥālāt), by which he meant qualifications, which were neither the essence of things, then the more or less separable accidents and therefore play a part not only in the conception of God, but in the domain of universals also. He believed that, by this explanation, he not only restored the unity of the divine being, but also justified speaking of the attributes of God, in as much as the words are nothing essential but simply conditions of phenomena, but his opponents were not satisfied with this compromise between being and not-being.

DJUBBĀLA The tribe of Djubbāla were one of the 70 Sanhājīya tribes who were the Ithnāshī. They lived west of the Lemtūna in the western desert on the shores of the Atlantic Ocean near Angoua and Cape Blanc. Djubbāla, Yahyā b. Ibrahim, while returning from the Hajj, induced the reformer Ya-Sin to settle in this district. His reformed Islam was forced upon the Lemtūna tribes, more particularly the Djubbāla (Jaia: 432 = Oct.-Nov. 1040). But on the death of Yahyā b. Ibrahim they refused to recognise the spiritual authority of Ya-Sin so that he had to retire to the adjoining Lemtūna tribes; in Muharram 448 (March-April 1056), to the number of 30,000, they besieged an Almoravid general Yahyā b. Umar in the Djebel Lemtūna and in the same year drove him with a large number of his followers to Tabaristān between Yabūn and the Djebel Lemtūna. They were probably subjected by Abū Bakr b. 'Amar, Yahyā's successor, about 493 (1062), and, with all the *ḥāshīyah* Sanhājīya, passed under the rule of Yūsuf b. Tashfin, the first Almoravid Amir. They shared the fortunes of this dynasty and since then their name has disappeared from history. They have been identified as the Gumbul of ancient writers.

DJUDHĀM.

The above is the traditional genealogical tree of Djudhām, the eponymous ancestor of the Banū Djudhām. Djudhām is only a nickname, his real name being 'Amr. He was the brother of 'Amila and Lakhm; i. e. in the first century A. H. these three tribes were believed to be very closely related. By this time the Djudhām had abandoned the Lakhm. Their Yamānī descent was not so readily accepted. Mayr and some particularly the Banū 'Amr b. Ḥusayn claimed Djudhām as a Maḥāzīya tribe which had in early times migrated to Yamān. Ancient verses are quoted in support of this. But even if we neglect the partiality of Arab poetry, all that can be deduced from these verses is the existence of friendly relations, possibly even of a *ḥāshīyah*. These discussions testify to the importance of the Djudhām. The great majority of the tribe itself claimed South-Arabian descent, which claim had perhaps an more substantial basis than the other view, but better corresponded to their political situation in the Sāsānīd period.

During this period, the Djudhām were really a confederation of nomads, occupying the deserts between the Euphrates, Syria and Egypt. In the north, they were bounded by the Banū Kalb, and on the Arabian side by the Medians territory; they were scattered throughout the Wādī 'Aḥṣā and around Tabūk and Alā; they were to be met with on horseback on the Egyptian frontier; their territory was undulating, of deserts, steppes, pastures, oases low and far between and including 'Amān, Ma'ān, Adhīm, Madyan and Ghazza. They made their living on the trade routes joining Arabiā, Syria and Egypt, as guides and caravan-leaders and levied customs and tolls for their services. The *Sira* mentions as belonging to them, a water-lugger named *Ḥāshī al-Salāl*, which has not yet been identified, and *Ḥāshī*, an extensive area to the northwest of Alā. They have been represented as descendants of the Midianites, but why not of the Nabataeans as they occupied exactly the same territory as the latter? The Midian tribe of Banū Naṣr is said to have broken off from them and adopted Judaism. This circumstance explains why this religion made converts among those of their clans, who lived near the Median territory. Their constant intercourse with Syria and Egypt had early conducted to the diffusion of Christian ideas among the Banū Djudhām. In the early years of the Hijra, we find them at the head of the *Murābiḥa* or Christianised Arabs, allies of the

munication, and conversion to Islam of the Nubian kingdom and thereby broke the strongest defence that the lands on the Upper Nile had against the invasions of the Arabs and Jakins. Since then we have been for centuries without any notice of them, but at the present day all the numerous Daggas (q. v., p. 561) tribes, i.e. the Semi-Arabs of the Fés and Wadai are still positive that they have a common bond in being Djulahnā. Neschigal is our authority for this important fact. It gives us a clue to understanding the mingling of races in the Eastern Sudan and makes it possible to trace to the present day the history of a tribe of whose existence we have evidence in pagan times.

(C. H. READE.)

DJULAHNA, or **IGORANA**, the name of the Musalman ~~tribe~~, who form almost all occupational caste throughout Northern India, though they have also found their way to the cotton mills of Bombay. At the Census of 1901, their number was three millions, or nearly 1% of the total Musalman population, of whom just half were in the United Provinces.

(J. S. COTTON.)

DJULAMERG (Djulastruk), the capital of the Sandjak of Bakkriz in the Wilayet of Wilis (pop. 4000, according to Culbert). The town is shut in by mountains and lies about two miles from the Zila. There are hot sulphur springs near it.

According to Andrews's view (see Paddy, *Watuwa*, i. 169; M. Hermann, *Bethlin*, p. 143), combated by Marquart, *Arabia*, p. 158 et seq., Djulamerg is the *el Djulamer* of the ancients. The village of Djulamerg gave its name to a Kurdish clan, on which see the Faql ~~tribe~~ el-Umar: *Kat. et* *Arab.*, iii. 317 et seq.

Bibliography: All Djulmer, *Djulastruk*, *Lebanon*, p. 205; Ritter, *Erdbkunde*, vi. 625 et seq.; Culbert, *La Turquie d'Asie*, ii. 528 et seq.; Binder, *Die Arabier*, p. 163 et seq.; *Geographical Journal*, xviii. 132.

DJULFA (Russian *Джула*), an ancient, once important town in Armenia, on the north bank of the Araxes, lying approximately in lat. 30° N., now belonging to the Russian government of Erivan. Shah Abbas I the Great (see above p. 2) brought about the ruin of the town in 1604 (1605) he brought the entire population (2000 families) which had ~~seen~~ his sympathies by expelling the Turkish garrison during the Russo-Persian war, to Persia, chiefly to the capital Isfahan and thereby introduced a new element into the population of his kingdom, of great value for their industrious habits. The Armenian town destroyed by Abbas I soon became utterly deserted and it was not till the beginning of the xviiith century that a few families settled among its ruins; at the present day there are only a few stone houses besides a few customs-offices inhabited by Russians and Circassians for Cossacks, as Djulfa is a station on the frontier on the southern (Persian) side of the Araxes to the Persian frontier and a *khân*. Considerable ~~part~~ of the town (including

20 churches) still exist; the large cemetery with its thousands of tombs of former inhabitants is celebrated. The remains of a splendid bridge, which is traced back to Roman times, may be mentioned; over it most of the traffic between Persia and Armenia (especially to Erivan and Tiflis) crossed the Araxes. To distinguish it from the Armenian colony in Isfahan, which also bore the name Djulfa, the original Armenian town is now usually called *Fiki-Djulfa* = *the bridge*.

The Armenian colony in Isfahan, *New Djulfa*, quickly developed into an important suburb with flourishing commerce and industries. There can be no doubt that the industrial, enterprising and wealthy Armenians laid the foundations of Isfahan's great trade and wealth. In their new home the Armenians enjoyed absolute freedom of religion; they built 24 splendid churches, three of which still exist. The flourishing period of this colony lasted a century after which its importance and prosperity gradually began to decline. At the present day the suburb of Djulfa, which has extensive gardens, has only a few thousand Armenian inhabitants.

(M. STRACK.)

DJUMA, i.e. the day of "general assembly" is Friday, because it is a religious obligation on Muslims to attend on this weekly holy day the divine ~~service~~ corresponding to the daily midday *salat* (*salat al-ghayb*). The Friday *salat* itself is also called *ghum'a*, even in the Kor'an (iii. 9) it is expressly ordained in a verse revealed at Mecca: "When ye are called to the Friday *salat*, hasten to the praise of Allah and leave off your business". It is by reason of this verse in the Kor'an that attendance at the *Djuma* is regarded as a duty binding on all male, adult, free Muslims, at least as far as they are legally considered residents in the locality (*muqim*). Apart from this the weekly holy day of Islam is not a day of rest and is thus essentially different from the Jewish Sabbath or the Christian Sunday.

The Friday service consists of a communal *salat* of two rak'a's and a sermon, which is delivered

by the *Khafis* before this *salat*. But it is considered meritorious and is the usual practice to perform another *salat* of two *rak'as* before the *Khafis* also. For a *djumā* to be valid, there must, according to the *Shafī* school, be at least 40 Muslim persons who are legally entitled to take part in the worship of God. The Hanafis and Malikis do not however adhere to the number 40; they say that the service should only be held in a town or community of some size. According to the *Shafī* and most of the other *fiqh* it is further illegal to hold the Friday service in more than one mosque in the same place, except in cases of necessity, when it is impossible for all the inhabitants to meet in one building.

It may be presumed that Muhammad himself used to hold a common *salat* with a sermon, after the Jewish fashion, in the *mihrab* of his house at Medina on Fridays. Possibly he used to begin with the *qibla* which was followed by the address, just as in other assemblies of the same kind on other times a common *salat* preceded the discharge of other business. At the Friday service in the great military camp of the Muslims after the death of Muhammad, the *Umayyads* and their governors used to appear with all the symbols of their rank and conduct the service. The individual tribes used at that time to meet in a mass of their own in camp, but the *Umayyads* endeavored to unite them in one mosque. It is probably from this period, that the commandment against holding the *djumā* outside a town and holding it in more than one mosque dates.

In the later *Umayyad* period the ceremonies at the Friday service became more and more influenced by the Christian service. Thus the ceremonial *ajlā* (which is held on Friday in the mosque, after the faithful are gathered there, before the sermon) and the peculiar form of the *Khafis*, in two sections before the Friday *salat* seem to have arisen under influence of the Christian *missa*. The professional preacher gradually came to take the place of the *Caliph* and his representatives as conductor of the service.

(M. S. S. S. S. S.)

DJUMBLĀT. [See *ḌJUMBLĀT*, p. 1014.]

DJUMLA (Ar.: properly aggregate, sum, total), a technical term in Arabic grammar = sentence. The word in this sense is synonymous with *kalām*. On the latter *al-Lamādhani* says (*al-Fiqh*, p. 412-413): "A *kalām* is composed of (at least) two words, which stand to one another in the relation of subject and predicate". A single word as for example the imperative *qum* (stand!) can of course form a complete sentence, but in this case the subject (here: thou) is understood. — On the various kinds of sentences (nominal, verbal, adverbial, categorical, interrogative etc.) see the grammar and more especially the detailed treatment of the question in Muhammad *Abū*, *Dictionary of Technical Terms* (ed. Springer and others), 1. 245-250. (A. S. S. S. S.)

DJUNĀGARH, native state in the province of Kāthiāwar, W. India; area, 1,482 sq. mi.; pop. (1901), 395,423, of whom 22% are Muslims; revenue, about £180,000. It takes its name from the "old fort", in *Liparkot*, which contains Buddhist caves and a mosque built by *Salṭān Mahmūd Begar* (end of 15th cent.), who named the modern town, which contains a college and other fine buildings, *Mingolabad*. The state was founded about 1735, on the decline of Mughal authority, by *Shah Jahan Bāg*, *Patil*. The territory includes the *Gir* forest, where alone the lion is now to be found in India; the hill of *Girnar*, sacred to the *Jains*; the ruined Hindu temple of *Somnath* plundered by *Mahmūd Ghaznavi* in 1026; and the seaport of *Veraval*, which was the principal port of embarkation for pilgrims during the rule of the *Salṭāns* of *Gujarat* (q. v.). This state is one of the few in British India that still issues its own coin.

(J. S. S. S. S.)

AL-DJUNĀID a. "Abū AL-KAḤKAS", a *Ḥafṣid* not appointed by the *Caliph* *Yazīd II* to the Muslim possessions in India; he was disarmed after a brief tenure of office in 107 (725-726) *Abū al-Ḥafṣ* al-Kaḥkās who was then governor of *Khorāsān*, sent him back to India. When he reached the India, he attacked the Indian ruler *Abū al-Ḥafṣ*, who had adopted Islam a long time before and been recognized by *Yazīd II*, as ruler of these lands, took him prisoner and put him to death. Some authors accuse *al-Djunāid* of treachery to the *Abū al-Ḥafṣ*; the details are not quite clear, but it is at least certain that *al-Djunāid* had his brother, who was going to the *Abū al-Ḥafṣ*, to complain of his faithless conduct, secretly murdered.

During his stay in India he undertook several successful expeditions, on which he won rich booty. In the year 111 (729-730) Ashura b. 'Alid Allah al-Sulami, governor of Khorasan, who had come into conflict with the Sogdians and the Turks, was dismissed and al-Djunaid appointed his successor. He hurried with all possible speed to the help of Ashura and joined forces with him in Bukhara. The Turks were defeated at Zarnad near Samarkand and the Arab army brought back to Khwarezm. In the following year al-Djunaid again prepared for a campaign against Tikharristan. He had already sent several bodies of troops off by various routes, when the governor of Samarkand, Sawar al-Jar, sent him warning that the Turks were threatening this town and that he could not drive them back without reinforcements. Al-Djunaid at once set out, crossed the Oxus and reached Khwarezm there two routes led to Samarkand, the one across the steppes and the other through the mountains. He chose the latter on account of the heat of summer, but was ambushed by the Turkish Khadim in a ravine near Samarkand and had to ask Sawar's help. The latter hurried up but was attacked by the enemy and slain with the greater part of his army. Al-Djunaid was however enabled to continue his march and enter Samarkand. The Khadim then turned his attention to Bukhara and laid siege to the town, but was defeated in Kamuljan 112 or 113 (November 731) at al-Jawahir, and al-Djunaid entered Bukhara. Meanwhile the Caliph Harun had had to send him 20,000 more men from Basra and Kufa, they met him on the march and were sent to Samarkand. Early in 118 (spring of 734) al-Djunaid was dismissed; he had incurred the Caliph's wrath by his marriage with al-Kadila, daughter of the rebel Yazid b. al-Muhallab. 'Asim b. 'Alid Allah al-Hadadi was appointed his successor; but al-Djunaid died in grief of drooping before the latter entered in Khwarezm.

DJUNAID u. IJUNAIM, one of the ancestors of the Safawids [q. v.], father of Suljan Halid. Djunaid lived like his father in Ardabil but, as his religious and political views received disapproval, he was banished by Dihanshah, chief of the Kara-Kuyukh at that time. He then went to Diyarbakr and married a sister of Uzun Hasan [q. v.], the chief of the Ak-Kuyukh. The reputation as a Sufi saint, which he has in common with his ancestors and his son Halid, was not however weakened by these political alliances. He was slain in battle with the forces of the lord of Shilwan in 860 = 1456.

Bibliography: see the article SARAWAN.

DJUNAID, Abu 'Abdullah al-Muhammadi u. al-DJUNAYD al-KHARAZI al-Kawakibi, a celebrated Baghdad mystic; he belonged to a family hailing from Nahawand and was the nephew of Sari al-Safadi. He studied law with Abu Thawr, the pupil of al-Shafi'i. He made the pilgrimages to Mecca three and on foot thirty times; he died in Baghdad in 297 (910) and was buried in the Shattaya cemetery beside the mausoleum of his uncle. When some one expressed surprise that he

should hold a money in his hand in spite of his great reputation for asceticity, he replied "I will not renounce the path that has led me to God". The use of a money was in him one of the means of attaining a state of ecstasy. He was known as *Sayid al-Fayyaz* "lord of the sect" and *Taj al-Ulama* "prince of the learned". He admitted the superiority of prophets to saints and opposed the divine presence (*hausa*), of which the former give no information, to the contemplation (*mushahada*) of the latter. He preferred sobriety to mystic intoxication of the soul. In theology, he maintained that the knowledge of God only came from demonstrative reason. His pupils and followers are called *Ijunaidiyya*.

DJUNAID, a clever and cunning adventurer, said to have been a member of the royal family of Ashkanjlu (Lazcanians), *His. Mus.*, 531; *Agha-yusufzade*, p. 78), was born in Smyrna, where his father, the "Karamanoglu" i.e. the chief magistrate (according to Djunaid's sons his name was Ibrahim), had been given an office by Bayazid I. After Timur's flight from Asia Minor, Djunaid rose against the native rulers who had been restored by Tamas, the Ashkanjlu Taz and Omarbeg, and disposed them with the help of Mir Salaiman Celebi, Bayazid I's eldest son, who ruled in Adria-nople (1403 and 1406). According to the Turkish annals, *Lundn. i. c.* 413-416; *Alt. Türk. et. Akad.*, v. 156; Sari al-Din, i. 283 et seq. he gave his support to 'Ust Celebi, a son of Bayazid I, who was favoured by Mir Salaiman in his struggle with his brother Mohammed Celebi, but was defeated by Mohammed Celebi, who did not however deprive him of his power. The next came into conflict with Mir Salaiman who advanced against him with an army; abandoned by his allies, the Karamanoglu and Ghazimoglu, he submitted to the Sultan. The latter deprived him of his territory and took him with him to Europe where he was appointed governor of Achrida. Soon afterwards Mir Salaiman was attacked by his brother Musa Celebi and met his death in battle with him (1410). Djunaid took advantage of the confusion to return to Asia Minor; with a body of his old followers from Smyrna and Tyre, he drove out the governor of Ephesus appointed by Mir Salaiman and won again his former power. Mohammed Celebi, who overthrew Musa Celebi in 816 (1413), was restoring order in Rumelia, turned against Djunaid, stormed his strongholds (Kyrus, Kavadjik, Niz) and advanced on Smyrna which surrendered after a few days' siege. Djunaid, who had not dared risk a pitched battle, submitted, but was disappointed by the Sultan, receiving the governorship of Nikopolis in compensation. The Turkish sources, which mention neither his campaign which is presumably to be placed in 813 (1413) nor the previous one with Mir Salaiman, tell us that the Sultan forced Djunaid in 814 (1411-1412) to recognise his suzerainty and his claim to have

his name inserted in the sermons (*ḥuḥḥa*) and to strike coins (Lanuel, l. c. 449—451; *Al*, l. c. 267; *Seid al-Din*, l. 261). In 822 (1419) a usurper appeared in Wallachia who claimed to be Mustafa, the son of Mynad I. who had disappeared in the battle of Angora. Mynad took his side and sent with him to Samsat, pursued by Mynad II, where the Byzantine governor afforded asylum to the fugitives. At the Sultan's request the orthodox Mustafa was interned by the Emperor on the island of Lemnos and Mynad II a monastery in Constantinople. After the death of Mohammed I. the Emperor set up Mynad as caliph in the throne against Mynad II; Mustafa, who had made Mynad his rival, seized Komella and advanced against Mynad, who had come from Anatolia and was awaiting his opponents at Uluhad (Ispahan). While there Mynad succeeded in persuading the Komellian Rega, who had taken the pretender's side, to desert him; Mynad followed this example and left Mustafa to his fate (1422). Accompanied by a few followers, he reached Smyrna, where the inhabitants received him with open arms. With the poorly armed troops he raised in Smyrna Mynad defeated and slew the Aidinoghlu Mynad and soon regained the territory he had once ruled; he prepared a place of refuge for all eventuality in his castle of Ispah (Tiflis) on the coast opposite Samos. As the slave of his kingdom allowed him, the Sultan turned his attention to this dangerous usurper. A Turkish army invaded Ionia; Mynad's son, Khat Raman, was defeated and taken prisoner at Aligha (Thyrea); he himself retired to Ispah and made an unsuccessful attempt to obtain help from the Karmanoghlu; after a long siege and only when Genoese ships were threatening the town from the sea, he decided to submit and was beheaded with all his relatives in the Turkish camp; his son Khat Raman and brother Mynadoglu, who were prisoners on the Dardanelles, were executed at the same time. According to the Turkish sources, there were two campaigns against Mynad, the first in the year 827 (1424), according to the so-called Chronicle of Venetians, the second a year or two later (Lanuel, l. c. 508 et seq., 511 et seq.; *Khilafah-nama*, p. 79; *Al*, *Arab*, v. 209; *Seid al-Din*, l. 224 et seq.).

Bibliography: The chief source is Dukas, *Chronik*, p. 79—87, 96 et seq., 103—121, 134, 139—156, 165—176, 190—196; also isolated notices in Chalkokondyles, p. 209, 223 et seq.; in addition to the Turkish historians already quoted, cf. Feridun, l. 339 et seq., 161. Mynad (in Dukas; *Türk*, in Chalkokondyles; Zevardov, *Revue* in Schilberg, p. 14) is usually called *Ḥusayn* 'the Emperor' by Turkish writers, but sometimes also *Ḥusayn*. On the very rare coins (unpublished, in my collection), on which the name of the Sultan *Ḥusayn* (son) of *Ḥusayn* appears, and which were probably struck in 813 A. D., he calls himself *Ḥusayn* *Djunaid*; on the equally rare coin dating from his last usurpation with the date 825 (S. Lane-Poole, *The Coins of the Turks* [British Museum Catalogue of Oriental Coins, Vol. viii], p. 32) his name is given as *Djunaid* (son) of *Ḥusayn* in a Turkish (J. H. Mordtmann, *Revue*, p. 238) 'regular army', used in the Koran to the name of the New Testament *Ḥusayn*.

DJUNDAI-SÄBÜR, a town in Khazakhstan, founded by the Sasanid Shapur I. (where the name *Sasanid Shapur* 'conquered by Shapur', cf. Nöldcke, *Geschichte der Perser* etc., p. 41, note 2), who settled it with Greek prisoners. It is the town known as *Beth-Lapet* in Syria, corrupted to *Beth-Labai*, now almost unrecognizable in the former *al-Bai* and *al-Bai*; the site is marked on the present map by the ruins of Shikhabad (cf. Rawlinson in the *Journal of the Royal Asiatic Soc.*, li. 55; de Boiss, *Travels in Persia*, li. 167). The town was taken by the Muslims in the caliphate of Umar by Malik al-Ash'ari in 17 = 738, after the conquest of Tadmor; it was surrendered (Hakim, p. 382). Seif b. Umar's story in Tabari, l. 2567, and Ibn al-Athir, ii. 432, according to which the fall of the town was the result of a mistake made by the slave Munkhil, seems to be a romantic fiction. The slave Munkhil, the founder of a sect, was hung on a gate of the city. Djundai-Sabur was celebrated for its school of medicine founded by Khaym b. al-Ash'ari, where medicine was taught in the Achaemenid language; it survived down to the 'Abbasid period. The town was the capital of *al-Bai* in *al-Bai* (263-265 = 875-877), who died there in 265 = 878. In *al-Bai*'s time only a few ruins marked the site of the town (il. 130).

was sent after the Muslim conquest of Syria to designate five military districts, a division based on the Byzantine division into themata, each occupied by one legion. These were *Ḥazira*, *Urdun*, *Ḥamash*, *Ḥama* and *Ḥimmarin*; Mesopotamia was attached to the latter but separated by 'Abd al-Malik b. Marwan. *Ḥimmarin* at first belonged to *Ḥama*, till Yashil b. Ma'awayya formed a new district to include this town, *Amḥariya* and *Munbiḥ*. *Ḥamash* al-*Ḥashid* separated *Ḥimmarin* from the other places when he founded a separate district *Ḥamash al-*Ḥashid** [q. v. p. 315 et seq.] which included *Ḥimmarin*. *Bibliography:* Yāqūt, *Ma'ādh*, l. 136.

DJUNDAI-SÄBÜR, a town in Khazakhstan, founded by the Sasanid Shapur I. (where the name *Sasanid Shapur* 'conquered by Shapur', cf. Nöldcke, *Geschichte der Perser* etc., p. 41, note 2), who settled it with Greek prisoners. It is the town known as *Beth-Lapet* in Syria, corrupted to *Beth-Labai*, now almost unrecognizable in the former *al-Bai* and *al-Bai*; the site is marked on the present map by the ruins of Shikhabad (cf. Geogr.*, l. 201; *Wüstenfeld*, *Handb. d. Arab. Geogr.*, l. 201.

DJUNKAR, town in W. India, 56 m. N. of Poona; pop. (1901), 4,675. In the neighbourhood are many Hinduist caves, and the hill-fort of *Satara* where Shivaji (q. v. p. 310) was born. The town was brought under Muhammadan rule in 1436 by Malik al-Fajir, the leading Bahmani noble, and it was long the capital of a Muhammadan province. The governor was visited by Fryer, an English doctor from Bombay, in 1673. The chief buildings are the *Ḥusayn* *Masjid*, contemporary with the foundation of the town; a mosque dating from the time of Shah Jahan; and two *Ḥusayn* *Masjids*. An ancient *Ḥusayn* *Masjid* had quarters; a manufacture of paper still survives. *Bibliography:* *Quarter of the Bombay Presidency*, vol. (Part iii.) 149 sqq.

DJUR, [See *Ḥusayn*.]
DJURADJIMA, [See *Ḥusayn*.]
DJURAIJ, a saint, whose story is said to have been related by the Prophet himself and has

[J. S. Cotton.]

in the western part of Khwarizm (it is mentioned as early as the 10th (sic) century and some days north of the town of Balkh which still exists under the same, cf. Leach, ed. de Geoe, p. 284); according to the al-Fihrist (ed. Fuhrer, ed. Adhwardt, p. 209) 'Alī al-Dīn is stated at a later period to be descended from Fāḥ al-Bahrī, the sister of Hārūn al-Rashīd. Bahā al-Dīn Muhammad b. 'Alī had (1211) homage to Khwarizmshāh Tekesh in 588 = 1192; his grandson Bahā al-Dīn Muhammad b. Muhammad appears in Rawāḥshāh (ed. Dinwiddie, p. 135 of 147) as the consultant (*Mashrūf*) of the Khwarizmshāh Muhammad b. Tekesh (died 1220 = 1220) and a very early in his reign from the *Ṭarīkh-i Khwarizmshāh*; but this passage, like several other quotations in Rawāḥshāh, does not seem to be found in this work. Its author seems first to mention his father in his account of the last battles between the Mongols and Bahā al-Dīn al-Dīn Mangubek, (cf. above p. 1004) Bahā al-Dīn was then in Nishapur; the town had been held by two of the Sultan's principal officers. Tuglugh Beg and Karajin, but they were soon afterwards driven out by the Mongol general Khatib; Bahā al-Dīn went with a few companions to Fāḥ and took refuge in a fortress there, but was afterwards handed over by its commander to the Mongols at their demand. He was kindly received by Khatib; entered the Mongol service and for the next few decades filled the office of *Sāhib-Dīwān* (treasury-minister) of Khwarizm under different governors; on several occasions he accompanied Arghūn-Aghā, the last of these governors, to the Mongol capital Karakorum. In the second year of the year 651 = 1253, when he had reached the age of 60, he wished to retire, but at the request of the Mongols had to give up the post and the year in Fāḥ.

'Alī al-Dīn tells us of himself, that, while still a youth, he chose an official career against his father's wish, without having received a proper literary training, and received a position in the Dīwān. On two occasions (647-649 = 1249-1251 and 649-651 = 1251-1253) he made a journey to Mongolia and back with Arghūn-Aghā. When prince Hāshim invaded Fāḥ at the head of an army and took over the government of the country, 'Alī al-Dīn was left in Khwarizm to the spring of 654 = 1256 to govern the land with Arghūn-Aghā's son Ghāṣṣ-Mulk. In the same year he earned the gratitude of the people by rebuilding the town of Khawāshān (the modern Kufan) which had been destroyed by the Mongols; at his request also Hāshim protected the celebrated library of the Assassins from destruction at the taking of Alamūt (q.v., p. 244 of 147); the books were handed over to 'Alī al-Dīn, who ordered all to be burned that dealt with the histories of the sect and preserved the others; the majority were afterwards placed in the newly founded library in Marv.

In 661 = 1262-1263 'Alī al-Dīn was appointed governor (*Sāhib*) of Baghdad; he probably owed this appointment to the influence of his brother Bahā al-Dīn Muhammad (see below) who had been appointed *Sāhib-Dīwān* in the same year. Consequently, as found Alī al-Dīn (*Ṭarīkh-i Ghāṣṣ*, MS. in the Univ. of St. Petersburg, 133, p. 295) tells us, he governed the land of the Arabs "in place of the Caliph" (for *Ḥāṣṣ al-Dīn*). He is said to have won great renown in restoring

the prosperity of Baghdad and the tranquillity of the province, he expended 100,000 *ḍinārs* of gold in making a canal from the Euphrates to Kufa and Najaf and thereby opened up new areas to commerce (Waghal, ed. Ḥafīz, p. 59). The work was carried out by Bahā al-Dīn 'Alī b. Muhammad, the father of the author of the *Ṭarīkh al-Fihrist*; Bahā al-Dīn afterwards sought to get Alāḥ to dismiss the governor and was therefore murdered one night at the latter's instigation. 'Alī al-Dīn himself put the assassin to death, but at the same time, confiscated the murdered man's property (*al-Fihrist*, ed. Adhwardt, p. 210). A new monastery (*Ḥāṣṣ*) was built at 'Alī's tomb; the governor on the other hand sought to protect members of other faiths from the fanaticism of Muslims; in 1268 the Nestorian patriarch Dinkha found a safe asylum in his house. In 1271 an attempt was made by the Assassins to murder the governor, whereupon the Christians were accused by the Muslims of complicity in the plot; in spite of his tolerance 'Alī al-Dīn found himself forced to imprison several bishops, priests and monks.

The hostile attacks to which the two brothers were exposed at the end of Bahā's (1265-1283), particularly in the latter years of his rule, had even more serious consequences for 'Alī al-Dīn than for his brother. In 669 = 1270/1271 Bahā had the accounts of income and expenditure for the province of Baghdad audited and arrived at the sum of 12,000 *ḍinārs* of silver and 100,000 *ḍinārs* of gold. 'Alī al-Dīn was able to show that this deficit had been caused by the poverty-stricken condition of the people and that the inhabitants would have been gladly ruined, if the payment of the money had been insisted on. Alāḥ was satisfied with this explanation and allowed the province of its arrears of taxation. 'Alī al-Dīn was allowed to return to Baghdad. The same accusations were brought against him in 680 = 1281 with more success. 'Alī al-Dīn was further accused of conspiring with the Egyptian government. He was arrested and, to escape torture, he pledged himself to pay 300 *ḍinārs* to the treasury but, after exhausting all his resources was only able to raise 120 *ḍinārs*; he was set free on the 4th Rabi' al-Thani = 17th December by Alāḥ's orders, but soon afterwards re-arrested for the 130 *ḍinārs* which he still owed, tortured and led naked through Baghdad. When the *Sāhib-Dīwān*, through the favour of the new ruler Abū Bakr (1283-1284), was able to destroy his enemies, 'Alī al-Dīn also received his freedom and had his property and his governorship of Baghdad restored to him; but in the same year (681 = 1282/1283) prince Arghūn on his own initiative reopened the enquiry into his administration and confiscated all his property. When 'Alī al-Dīn, who was in Acre at the time, heard this, he had an apoplectic stroke and died on Saturday the 4th Shawwāl 681 = 6th March 1283.

'Alī al-Dīn's references to the defects in his literary education are probably to be put down to conventional modesty. He is praised by his contemporaries, among them the writer of the *Ṭarīkh al-Fihrist*, the son of his enemy, as a highly cultured man and a patron of poets and scholars (Zakariya Qazwini's *Ṭarīkh al-Awāṣin*, amongst other works, is dedicated to him, cf.

Bruckmann, v. 481 in the first edition of this work in 660 = 1253; his history was regarded as an unrivalled model for its style. The work is divided into three main sections: 1. History of the Mongols and their conquests to the events after the death of Hsien Tsung in the middle of the 13th c. (p. 661 et seq.), including the history of the descendants of Hsien and of the 14th c.; 2. History of the dynasty of Khwarezmshahs, based in part on previous works such as the *Maqāṭib al-Fatāwā* of Abū Ḥ-Ḥasan Rāḥī (cf. above p. 397 et seq.) and *Yāqūt, Isṭiṣṭāʾ al-Aṣḥā*, cf. Marguth, v. 208 et seq. and the *Zayn al-Ḥayāt* of Ḥ-Ḥasan al-Dīn al-Rāḥī (cf. above, p. 100), and a history of the Mongol government of Khwarezm in the year 630 = 1238; 3. Continuation of the history of the Mongols to the extinction of the Assassins, with an account of the sect, based chiefly on works found in Aleppo such as the *Sayyidat al-Salāṭin* (cf. above p. 492); other works since lost are also quoted such as the *Tarīkh al-Dīn al-Dawla* and the *Tarīkh al-Salāṭin* (written for the Ḥāfiḥ Fakhr al-Dawla (died 387 = 997); on this work cf. W. Barthold in the *Orientalische Literaturzeitung*, 74. *Nachrichtensblatt*, 1. 174 et seq.). Extracts from the *Tarīkh al-Dīn al-Dawla* have been published in *Dahmery (Journ. Asiat.*, 18th Ser., 1. 372 et seq.); Schöfer (*Christenliche Missionen*, 11. 106 et seq.); Himmels (*Revue de l'Asie*, 1. 233 et seq.); Salomon (in W. Rāḥī's *Kutub al-Hikm*, Introduction, p. 11. et seq.) and Barthold (*Tarīkh al-Dawla*, 1. 103 et seq.); cf. the translation of passages in d'Oshon, *Histoire des Mongols*, 1. 429 et seq., 441 et seq.; Elliot, *History of India*, 11. 380 et seq. and 11. 384 et seq.; *Tarīkh al-Rāḥī*, p. 288 et seq. The accounts of the author were first collected by Quatremère (*Fundamenta des Orients*, 1. 220 et seq.; *Histoire des Mongols*, 1. 100 et seq.) and afterwards by d'Oshon, (*Histoire des Mongols*, 1. p. 471 et seq., 11. 420, 511 et seq., 536 et seq., 582); Elliot, (*History of India*, 11. 384 et seq.) and Schöfer (*Christenliche Missionen*, 11. 106 et seq.) only reproduces Quatremère's and d'Oshon's views and the facts given by them; a few corrections in d'Oshon are to be found in Hammer-Purgstall's *Geschichte der Hohen* (see Index). A complete edition of the *Tarīkh al-Dīn al-Dawla*, of which the first volume has already appeared (1913), is being prepared by Mirza Muḥammad Ḥ-Ḥasan, *GHA Memorial Series*; the fact that no such edition has hitherto been undertaken is mentioned by Brown in his *Literary History of Persia*, 11. 473 as "nothing less than a scandal". The work, which has considerably influenced historical tradition in the east, is for us also an historical authority of the first rank. The author is probably the only Persian historian who had travelled to Mongolia and described the countries of Eastern Asia from his own experience; it is in the *Tarīkh al-Dīn al-Dawla* and to the *Journaux de William de Rubruck* that we owe practically all we know of the institutions in the Mongol capital Karakorum. The accounts of Čingiz-Khan's conquests are given nowhere else in such detail; many episodes, such as the battles on the Sir-Darya above and below Olia and the celebrated siege of Khawārmīn are known to us only from the *Tarīkh al-Dīn al-Dawla*. Unfortunately Buwaini does not give us in these cases the first

impressions of a contemporary, but the opinions of the next generation, so that the details of his narrative, particularly the statements of the numbers of combats and slain have to be taken with great caution; cf. for example, the fact, pointed out long ago by d'Oshon (1. 432 et seq.), that the number of Baghād according to Ḥ-Ḥasan was defeated by 5000 men all of whom were slain in the capture, while Ibn al-Aṭhir (ed. Tarnberg, 11. 234) in the authority of an eye-witness, says the garrison consisted only of 400 cavalry. The account of the events in 658 = 1253 before the Mongol conquest, particularly of the battles between the Ḥ-Ḥasan and the Khwarezmshah Muḥammad, is given in different chapters, the result of which is that the author gives quite another account in the later chapters from the earlier, apparently from other (written or oral) sources. It was only by later compilers like Blühdorn that these contradictory accounts were woven into an uniform narrative, not of course, according to the criteria of modern criticism. European scholars, to whom such compilations were much more accessible than the original authorities, have been frequently led astray by them.

Buwaini wrote his history while still a young man and does not seem to have again returned to the field of research in later life. According to his own statements he was asked, when in Mongolia, only in 650 = 1253 to write a history of the Mongol conquest; in the preface to the work we are told that the author was 27 years old at the time of its composition; in the account of the siege of Baghād and Samarkand the year 658 = 1253 is given as the date of composition of this chapter (cf. the text in Schöfer, *Chrest. Pers.*, 11. 114 et seq.) in the (later) manuscript B. M. Or., 155 (cf. Hieu, *Catalogue*, etc., p. 161) the month Rabi' 1. (15th February—15th March) as the date of the conclusion of the whole work. In spite of Quatremère's views, it cannot be proved that the preface was written much before this date. Quatremère relies on the fact that Ḥ-Ḥasan, who, according to Rāḥī al-Dīn (cf. Blühdorn's edition, p. 331), died in 655 = 1257, is mentioned in the preface as still reigning; but the date given by Rāḥī al-Dīn is certainly wrong; according to the Chinese authorities Mōngke Khan did not die till August or September 1259 (in the 7th month, cf. C. Arcand in the *Asiat. des Orient. Seminaire de Berlin, Asian Stud.*, 11. 153); the author of the *Tarīkh al-Dīn al-Dawla* (Kareem, p. 1292), which was also written in 658 = 1257, only knew of his death through a vague rumour. Quatremère is in the same error in his thesis, that the author could not have concluded his work with the account of the extinction of the Assassins, although, as Quatremère says, Muḥammad Nikhā al-Murād (cf. his account of the fall of Baghād in the *Tarīkh al-Dīn al-Dawla*; a similar account is actually to be found in 220 of the St. Petersburg manuscript (Imper. Library, 11. 21 34) of Ḥ-Ḥasan's work, but the chapter containing it is expressly stated to be a "continuation of the book" (*Ḥ-Ḥasan al-Dawla*). Quatremère's statement that in the year 663 = 1264-1265 (mentioned in the account of Sulṭān Ḥ-Ḥasan al-Dīn (an adventurer is said to have declared himself the lost Sulṭān in this year), seems to be based on a wrong reading in a manuscript,

the St. Petersburg manuscripts give the date as 633 = 1253-1254.

During the persecution he suffered under Aḥmad, Djuwaini wrote in Arabic an epistle of consolation to his brother (*Tasliyat al-ḥayāt*), as it is correctly given in Quatremère, *Revue orientale*, i. 274 and Hammer-Purgstall, *Geschichte der Sibirie*, i. 307; cf. Wagnaf, *ibid.*, p. 101, and Mikhoud, *Paris, lith.*, Vol. 4 without pagination. In d'Ochsen, *ibid.*, 583, the title is erroneously given with a reference to Mikhoud as *Tasliyat al-ḥayāt*, 'la visite des frères'; the same mistake occurs in Schaefer, *Paris, lith.*, d. Notes, p. 10. A *ḥayāt* from this work issued by Wagnaf (l. c.) to have been imitated by seventy poets who added verses with the same rhyme (*ḥawāṣṣ*). (W. WARTHOUD.)

DJUWAINI, *SHAMS AL-DIN MUHAMMAD* b. MUHAMMAD, brother of the preceding, a Persian (Persian) as *Shams al-Din*, he was at the head of the administration of Persia under Mongol rule in the reign of Ilkhan (to 1263), Aḥmad (1265-1283) and Ahmad (1282-1284); according to Keshid al-Din (ed. Quatremère, p. 392 of 1894, 400), he was appointed to the office in 661 = 1262-1263. It is not known whether he was older or younger than his brother; we know nothing of his career before the year 661; he is not mentioned by his brother. In 677 = 1278 he was sent to Andalus to arrange the affairs of that province; an account of his work there is given by his contemporary Ibn Khaldun (*La Houssna, Account de l'Espagne*) and others. The 12 years of Aḥmad's reign were troubled for Shams al-Din in his brother; it is true that he was not, like Aḥmad, deprived of his freedom and property and that he was even able to retain his office; but his enemy Majid al-Mulk Yaqut was appointed controller of the kingdom (*ḥakim al-Mamlaka*) and thus became second minister along with Shams al-Din; comments drawn up in the *Wahid* here on the right side the seal of the *Shams al-Din* and on the left that of the *Yaqut* (Wagnaf, *ibid.*, p. 95). on ceremonial occasions at court, the *Yaqut* was openly favoured by the ruler, while insults and mortifications were heaped on the *Shams al-Din*. After the death of Aḥmad the situation took another turn: Ahmad, who had adopted Islam, was completely under the influence of Shams al-Din. *Shams al-Din* and his brother were exonerated from all the accusations levelled against them and received the most lavish compensation; Majid al-Din on the other hand was accused of high treason for his relations with Arghun, handed over to his enemies, and put to death by them (with *Shams al-Din* l. 681 = 26th August 1282, according to Hamid Allah Keshid, *Tasliyat al-ḥayāt*, MS. in the Univ. of St. Petersburg, No. 533, p. 324; the date given by d'Ochsen, *Revue des Sibirie*, *ibid.*, 580 following Keshid al-Din, does not correspond to the week-day). After the struggle between Ahmad and Arghun had ended in favour of the latter, Shams al-Din could expect no good from the new ruler; after some hesitation he had to make up his mind to pay homage to the victor, was at first treated kindly, but soon afterwards a charge was brought against him and he was executed on the 24th October 1284, when the town of Ahmad (on the road from Keshid to Samarkand) was not the same place; then troops were

sent to Tashkent, where Wagnaf visited them in 692 = 1293 (*Tasliyat al-ḥayāt*, *ibid.*, p. 142).

Like Aḥmad al-Din, Shams al-Din was considered a patron of art and learning, and even wrote Arabic verse, which, however, survived of his time (*Shams al-Din*) to the critics of Baghdad, *ibid.*, p. 58 at the foot). According to Keshid al-Din (p. 103) the work *Shams al-Din* was dedicated to him, and he himself wrote a commentary (*Sharḥ*) on it. The epistolary poems of *Shams al-Din* as *Shams al-Din* are attributed to Shams al-Din; the third of *Shams al-Din* prose works (*Kitāb*) consists of questions by the *Shams al-Din* and the poet's replies (found in the *Granat* d. *Iran*, *Phil.*, ii. 344). Shams al-Din himself, as Wagnaf (p. 142) correctly says, was never in Baghdad, but his death was lamented even there. He was particularly celebrated for the prosperity he brought the kingdom and for his protection of Islam from oppression by the heathen rulers. Hamid Allah Keshid (*Tasliyat al-ḥayāt*, MS. in the Univ. of St. Petersburg, 153, p. 322), the cousin of his enemy Yaqut al-Din pays him the doubtful compliment of having obtained for himself by his good government (*ḥakim al-Mamlaka*) vast estates and considerable wealth; his daily income from his estates is said to have been 1000 dinars (according to Keshid al-Din, *ibid.*, d'Ochsen, *ibid.*, 581 1000 dinars is 1000000, but even this would be an incredible sum for those days). Wagnaf (p. 95) also tells us that when in the reign of Keshid in the year 693 = 1294, the revenue of the estates (*ḥawāṣṣ*) of the *Shams al-Din* (*ḥawāṣṣ al-ḥayāt*), which had been incorporated in those of the ruling house, was estimated, it was found to be 300 (1000) a year. Cf. d'Ochsen, *Revue des Sibirie*, *ibid.*, 580 300 of 1894, 554 of 1897, iv. 4 of 1897. Hammer-Purgstall, *Geschichte der Sibirie*, see Index. (W. WARTHOUD.)

DJUZ, *Shams al-Din* (A), "a part"; in Persian "foot" in a line, *ḥawāṣṣ* is also the name of the 30 divisions into which the Koran is divided for purposes of recitation.

DJUZHAN, Persian *ḥawāṣṣ*, the older name of a district in Afghani Turkestan between Marghān and the Amu-Darya. Its boundaries were not well defined, particularly to the west but it certainly included the country containing the modern towns of Mazar-i-Sharif, Andkhuy, Gulistan and Sazal. Lying on the boundary between the plateau of the Pamir highlands and the slopes of the north, Djuzhan probably always supported nomad tribes as it does at the present day in addition to the permanent settlements in the fertile valleys (cf. *Shams al-Din*, p. 322, d'Ochsen, *ibid.*, 580). The principal wealth of the land lay in its herds (camels: *Shams al-Din*, *ibid.*; *Yaqut*, *ibid.*, p. 213 — horses: *Shams al-Din*, *ibid.*, p. 128, p. 147 note 22; *Yaqut*, *ibid.*, p. 212 — sheep: *Yaqut*, *ibid.*, p. 213; *Yaqut*, *ibid.*, p. 214) cf. *Shams al-Din*, p. 322, d'Ochsen, *ibid.*, 580. Although the way from the highlands of Iran to the north of the Amu-Darya lay through Djuzhan, it was used not so much for friendly intercourse, as as a military road for armies passing through it. While the vicinity of the slopes with their nomad herds constantly threatened any peaceful development on a small scale, the general history of the country was dominated by the greater powers in the southwest and the northeast to be that of a buffer state on the ancient frontier between different races.

The district, which in the beginning of the 16th century was attached to Tekkeistan (see Marquart, *op. cit.* p. 67), was conquered on the occasion of al-Ashraf's 'Fah' campaign in 13 A. H. by his lieutenant al-Ashraf. The marches suffered not only from the wars with the Turks but from domestic differences within Islam also. In the year 1114 = 1737 the Khakha was defeated by Ahmad b. Abdallah al-Khazari near the capital of Dihlihar (Shahr-i-Kha). In 1215 = 1743 the 'Ali b. Vahid b. Zaid — whose tomb was revered long afterwards (cf. Wellhausen, *Arab. Nachr.* p. 311) fell in battle here against the Uzbeks. During the 'Afghani period the government's residence was in Andar (probably the Dihlihar of Bagrat Khurram, p. 2, possibly the modern Sar-i-Pul); the native ruling house of *Qajar-Afghani*, the Afghani dynasty continued however to survive and had its capital in Kandahar (cf. Ishtaki, p. 370; Ibn Hisham, p. 311 *et seq.*; Vahidi, p. 287). The Dihlihar (Shahr-i-Kha) occasionally appears as the political centre of Dihlihar, while Kandahar (p. 287) and Vahidi, p. 287 *et seq.*, mention al-Yahidi as Maimona (q. v.) as the capital. The ancient name Dihlihar appears gradually to have fallen into disuse, to survive in literature only for some time longer. The various towns in it continue to be mentioned again and again as the scenes of hostile attacks; we can only mention Ghar-i-Khan and Timar's fortifications here. Nothing shows the importance of the district more clearly than the fact that a number of towns have survived all these vicissitudes to the present day.

In modern times quite a number of petty Uzbek Khanates (Akke, Andkhak, Namergan, Sar-i-Pul, Maimona) have been established in the ancient Dihlihar, but they were soon absorbed by raids of their more powerful neighbours such as the lords of the Turkoman nomads. Since the time of 'Abd al-Muhammad (q. v.) these Khanates have gradually been incorporated in the Afghan province of Turkistan; Maimona alone retains a vestige of independence under Afghan suzerainty.

DOBUZJANI MINISTRI (ARABIC: 'AMM 'AMM 'AMM) v. SAKHJ (ARABIC: 'AMM 'AMM) a Persian historian. His father, who filled the office of *Khalif* in Hamayun and Jahangir, was slain, while going to the Caliph of Baghdad as ambassador of the Shahr, by robbers who fell upon him on the way. He himself escaped to India (Dihli) when the Mughals came to Dihli in 629 (1227). He spent the years 640—643 = 1252—1255 in Yakhwan, then returned to Dihli and received the office of *Khalif* of Ghazni and of superintendent of the *Nadira-Madrasa* in Dihli. He was chief *Khalif* from 644—651 = 1255—1258 in the reign of Nasir al-Din Mahmud, who had been on the throne since 644 = 1256, was then disgraced but restored to his former position in 653 = 1258. Nothing definite is known of his later days except that it may be deduced from his history, which he called *Fakhr al-Nasir* (printed in the *Bibliotheca Indica*, in 1864, trans. by Karam, *ibid.* 1873—1876) in honour of Sal-

ah Nasir al-Din, that he was still alive in 658 (1260).

DOAN, the name of a valley in Hagerman, among the miles in length, running in a N. W. direction between the 25th and 29th degrees of east longitude. This valley was visited in 1840 by Van Wrede in an unsuccessful attempt to reach the Salt Lake. Theodore Bent and Mrs. Bent had intended to go by this route in 1893—1894, but were prevented by their Arab guides, who represented that the people of the town of Hamdan, situated near the head of the valley, intended to attack them. Bent suggests that this is the town of Hamdan, the *Hamdan* of Ptolemy, and Thomas of Ptolemy, Bent merely passed the mouth of the W. Doan, whereas joins the W. al-Jal, about three English miles below Khalla. He says it has two branches, only the larger of which bears the name Doan. The town of Doan was a great emporium in the days when the transcaucasian trade flourished. Passing to the west past the Doan had across the Salt Lake at the point reached by Van Wrede and continued to Hamdan. Hamdan mentions two places, one called Doan in the 13th century, and one Doan in the 14th.

[q. v.], claim to have come from Dongola. Burckhardt was told that the power had long been in the hands of the Zuber and Fanuise families. The latter are probably the Fani, who founded the kingdom of Senaar some time after 1500 A. D. and extended their conquests as far as Dongola. At the beginning of the 18th century the Shäyḥiya Arabs became supreme in the country, besides them there were probably also 'Alabūla [q. v., p. 1073 et seq.] and Khababū. The influence of the tribes became considerably diminished when the Mamlūks, who had escaped the massacre of 1811 and 1812, found a firm footing in Dongola, soon won the sympathies of the people, endeavoured to protect them from being plundered by the Arabs and successfully endeavoured to promote agriculture: they also drove the Shäyḥiya out of their stronghold Hakkā, (the modern New Dongola) on the left bank of the Nile 80 miles north of Khartoum, which they then made their headquarters. But when in 1820 the conquest of the Sūdān by Isma'il Pasha began, they fled to Shendi, while the Shäyḥiya offered strenuous though vain resistance at two points before they finally submitted to the Egyptian troops. Dongola now became one of the five mudiyas, into which the conquered country was divided; but native chiefs were not, however, deprived of their position. In 1882 the province, like all the others, became affected by the ruling of the Mahdi, himself a native of Dongola. After the governor Muhammad Pasha Yawar had twice defeated the invaders, in the battles of Deiba and Korri, it was decided in June 1884 to recapture the province, which then fell into the possession of the dervishes. It was not reconquered in 1890, when Lord Kitchener's troops entered Dongola on the 20th September, after twice defeating the dervishes. In terms of the agreement of 19th January 1899 the country became a mudiya of the Anglo-Egyptian Sudan.

DONME, a sect of Jewish Māḥamadāna in Salonika. In October 1678 the false Messiah Sabbatai Zebi died; he became worshipped and addressed in prayer as a saviour by the majority of Jews in this and even after their adoption of Islam. His widow thereupon declared that her brother Jacob was her son whom she had borne to the resurrected Sabbatai Zebi as a ten year old boy. The infatuation for mysticism and cabalistic heresies, which were at that time very popular, enabled her to find many adherents

in her native town of Salonika, who recognised in her alleged son an incarnation of the Messiah and paid him divine honours. They called him Jacob Zebi [Quereḏa = favourite]. The Lurien-Cabbalistic idea that, when a husband no longer takes pleasure in his wife he should divorce her and take another in order to fulfil the commandment that married life should be happy, was strictly practised by the followers of Sabbatai Zebi and Jacob Quereḏa and resulted in countless marriages and divorces. The Turkish authorities, whose attention had been called to this state of affairs by numerous complaints made investigations and instituted severe penalties. Their wrath was particularly directed against Quereḏa the head of the sect, but, in order to escape punishment, he at once adopted Islam. Many of his followers also assumed the turban and performed a common pilgrimage to Mecca. On the return journey Quereḏa died and his son Berechia was thereupon worshipped as the Messiah and a false incarnation. — They called themselves "Māḥamadāna" (al-Māḥamadāna), the Jews gave them the name "Māḥamadāna" and the Turks *Dönme*, "converts".

— They are divided into three minor sects, who are called: 1.) *Saviv* from Sanyas, the birthplace of Sabbatai Zebi. They are also called *Kāḥamadāna* or *Carahim*, because the aristocracy among them belong to this sect. 2.) *Yakubites* from Jacob Quereḏa. 3.) *Kamio*, founded by Jacob Kamio (ʿAbd al-Manān Kāwīsh) an attendant in the temple, at the end of the 17th century. They intermarry, attend the mosque as well as their own synagogues and observe many Jewish as well as the Muhammadan laws and festivals. At the present day there are still about a thousand families in Salonika numbering 10,000 souls in all of this sect. Their preacher is called *Al-Nakh-Din* and their leader at prayers *Paytan*. The *Paytan* gives the children instruction in the Bible and Shari according to the system of Sabbatai Zebi, administers justice, performs marriages and grants divorces and in his sermons admonishes his hearers to charity and kindness to the poor. Circumcision, originally performed on the eighth day, is now also performed in the third or fourth year, under Turkish influence. Their marriages are performed on Mondays or Thursdays; their ritual seems to be a mixture of Jewish and Muhammadan rites and customs. They believe that Sabbatai Zebi and Jacob Quereḏa will one day return and save them. As a result of intermarriage, they are gradually being broken up and in the course of a few generations will be quite merged in their Turkish neighbours.

DONUM (from the Turkish *dön* = to turn round) a Turkish measure of area, originally named from the peasant's habit of turning the plough and its team round when he reached the end of a furrow. The *donum* is a square whose side is 40 ordinary paces long with an area of about 1000 square yards. In the law concerning property

in land in Turkey (Art. 131) the *donum* is accurately defined. There is also a *donum* (decimal division) which is a square with a side 100 *paces* long.

DOST MUHAMMAD, the founder of the Barakzai rule in Afghanistan, was a son of Palada Khan who was made chief of the clan under Nadir Shah the Durrani King, and afterwards had the Ghazals put under him. He obtained great influence which continued under Zaman Shah until a rival, Waladar Khan, obtained the Shah's confidence, and Palada Khan was executed on a charge of conspiracy. He left twenty-one sons of whom Pahl Khan was the eldest. Dost Muhammad was the son and his mother was a Persian virgin. He was not therefore of pure Afghan blood. After his father's death Dost Muhammad lived as a child with his mother's relatives until his elder brother Pahl Khan, who had risen to importance as the principal supporter of Mahmud Shah against Zaman Shah, took charge of him at his twelfth year, 1215 (1800). Dost Muhammad remained attached to Pahl Khan in his varying fortunes, and when Mahmud Shah's second reign began in 1224 (1809), he obtained high position, and his great abilities were generally recognized. He was one of the principal agents in the defeat of Khan by Mahmud, and showed absolute unpopularity in getting rid of all rivals. Dost Muhammad commanded successful expeditions against rebellions in Kandahar, Herat 1232 (1816). After Herat was taken it is said that Dost Muhammad greatly insulted the wife of one of the princes who was herself the daughter of Khorasan son of Mahmud Shah. Dost Muhammad sent to Kandahar, and Khorasan in revenge seized and blinded Pahl Khan who was afterwards killed in the presence of Mahmud Shah. This murder caused a revolution of feeling against Mahmud Shah, and Dost Muhammad was able to raise a large force and defeated Mahmud and Khorasan, 1235 (1818). Kabul came into his possession. While Mahmud, and after his death Khorasan, retained Herat.

The power over central Afghanistan including the cities of Kabul and Kandahar and the great Durrani and Ghazal tribes remained in Dost Muhammad's hands. He never claimed to be Shah in succession to the Saddozai kings, but was content with the title of amir. His early career commemorated his father Palada Khan in his complex.

See a list of names in former editions.

Wahid-rizaiy-i-Siddiqi, *Palada Khan*, *etc.*

"Silver and gold give the news to the ear and moon that the time has come for the circulation of Palada Khan's courage."

The principal events in his reign including the invasions of Shah Shuja' at-Mulk, the war with the English, his flight to Merv, imprisonment in Calcutta and final reinstatement at Kabul in 1258 (1842) are related in Art. *See* pp. 270, 271. After his restoration he continued himself in his government, but had trouble with his eldest son Akbar Khan, who had been a principal leader in the war against the English. Akbar Khan died in 1260 (1849). The same year during the second Sikh war of 1848—1849 an

Afghan force entered the Panjshir to assist the Sikhs, but met with no success and returned in disorder after the battle of Ingiljar. After this Dost Muhammad saw the wisdom of confining his efforts to the consolidation of his own rule, and recovered the provinces beyond the Hindu Kush mountains which had been lost after the fall of the Durrani kingdom. Just before his death he succeeded in taking Herat which had been held by Persia ever since the capture of Kandahar in 1252 (1837). This event took place in 1258 (1843) and he died while in his camp there the same year. He left the succession to his fifth son Zaman Shah. All to the exclusion of his elder sons, M. Akbar and M. Afzal, which led to much subsequent trouble.

Dost Muhammad owed his rise to the incompetence of the later Durrani kings Zaman Shah, Mahmud Shah and Shah Shuja' as much as to his own undoubted abilities and lack of scruple as to the means of attaining his ends. He never hesitated at any murder or treachery, but yet was a good ruler according to the standard of his country and was considered a just man. Minor faults, such as an excessive fondness for drinking, did not stand in his way, and his name is still a great one among Afghans of all classes. He left behind him a much stronger though a less extensive kingdom than that of his predecessors. The possession of Badkhash, the Herat and Merv, Kandahar and N. Sind was really a weakness and not a strength to the administration, and their loss caused the internal government to be strengthened, with the result that his kingdom in despite of civil and foreign wars remained practically intact to the present day.

DOVIN. [See DOWIN.]

DRA, the Dard of Arab authors, a river in Morocco, flowing into the Atlantic Ocean 40 miles southwest of Cape Non. The Dra is the longest river in Morocco. Its course which is not very accurately known, is perhaps near 300 miles long.

The Dra is formed by the confluence of two streams from the central High Atlas, the Wad Idhar from the west and the Wad Tadj from the east. The former is in turn formed by the union of the Wad Tadjil or Imil which drains the Djebel Tadjil and the Wad Werrand (see the article *ATLAS*, p. 506 of my.) which drains the Djebel Sirwa. The second class in the country of the Abi Mergel. The two streams whose union forms the Dra flow in opposite directions through the long hollow between the High and the Anti-Atlas. Their comparatively narrow valleys are bordered by meadows and cultivated land; but, in consequence of the high level of their upper courses, rivers are rare and streams are practically not to be found in them. The population is almost exclusively Berber: Berber, Abi Sedrat, Imatra in the Wad Tadjil, Ahenna, Abi Marbil, Zengga, Abi Ager in the Wad Idhar. These tribes among whom are a few communities of Jews, are beyond the authority of the Sultan.

The Wād Dīr flows through the Anti-Atlas in the Ghomra (ravine) of Taza; it then turns to the southeast, traverses the Djebel Ham in a second ravine and then reaches the desert in valleys shut in by high mountains, gradually begins to widen, though the arid land which it waters does not exceed a mile and a half in breadth; sometimes it is limited to one bank only. The various districts watered by the river, Mesqiza, Tineulia, Tarnata, Feswila, Kiawa, which form the Dīr country, are among the richest in Morocco. For a stretch of 100–210 miles, villages follow one another in practically uninterrupted line in the midst of palm-groves and orchards. The most important are Tameggut on the left bank, which contains one of the most sacred Zāwīas in Morocco, that of Sidi Muhammad b. Nāsir, the founder of the Shīrīya order, and Beni Sidi. This district has been prosperous from quite ancient times; even in the 13th century Ibn-Battuta draws a picture of it which quite corresponds to the accounts given by the few modern travellers (Roberts, de Foucauld) who have visited it: "The banks of this river" writes the Arab geographer "are covered with luxurious woods and orchards. Every day of the week a market is held on the banks of the Dīr and in either or sometimes even at two of the places which have markets so vast is the area of the district and so large the number of its inhabitants. The land under agriculture in this country is seven days' journey from". The population is mainly Berber people (Jing in de Foucauld, 95%), of the inhabitants speak Tamazigh. Among them we find Berbers, Ait Sidi, Ait Vahya, Kabu, Ait Atia, and so many Haratīn that the word Haratīn has become a synonym for Tamazigh (cf. the article *Haratīn*). Except in Mesqiza these Haratīn have lost their independence and have no pay tribute.

The lower course of the Dīr is quite different in every respect from the central course. Beyond Moula al-Ghoulān, the river enters the desert region through which it flows till it reaches the sea. Its banks are uninhabited; the settled population is replaced by nomads (Chleuh, Ait, Ait e Melah, Ait e Mshar), who live some distance from the river. The latter describes a wide curve to the west and continues in this direction to its mouth; it gradually loses its volume as it courses through the desert. Apart from a few days when it is flooded, it is as dry as the Wādi of the Sahara. But the presence of subterranean waters enables some parts of its valley to be cultivated, for example, the sandy plain called Delaya, two days' journey long and one and a half broad which is covered with water when the river is flooded, and the fertile stretches called "maïr" in the bed of the Dīr itself at the mouth of the ravine that open into it. These six in number, which are separated from one another by barren stretches, grow corn, more especially wheat.

DRAGUT. [See *TOURNAI*.]

DRISHAK, the name of a Hindu tribe which has its headquarters at And near Rajpuri in the Peshawar District of the Punjab. The tribe is of Hindu origin, but in the present day is mixed with the local culture. The tribe has a strong place in the tribe in this tribe.

(M. LAMONTAGNE, France.)

DRUZES, the Druzes are a people of a nation living in the Lebanon and Anti-Lebanon, around Haifa and in the mountains of Hama. They have their own religion and hold a special position in the administrative arrangements of the Ottoman empire.

Their name is derived from that of Druze (q.v., p. 921). Their ethnographical origin is obscure, it is probable that they already had distinct racial features before the founding of their religion and that they were fully converted to it. They may be the remnants of some ancient people, who sought refuge in the mountains in times of invasion and always retained a certain sense of independence in these places to defend. Benjamin of Tadaia, who travelled in the East and died in 1173, believed that they were descended from the Israelites, who in the time of Alexander's successors became notorious in Asia for their brigandage and were therefore forced by the Romans to fall back on the mountains of Lebanon. In the 12th century they were regarded as the survivors of the Last Christians, who escaped the massacre at Acre when Saladin of Egypt took this town in 1191 and destroyed the last remnants of Frankish power in the Holy Land. This last tradition is clearly worthless, as it would place the date of the origin of the Druzes much too late; it is however interesting in as much as it is connected with the claim put forward by the Druze chief of the 12th century to be descended from Godfrey de Bouillon.

The Druzes, who have an Emir or a *Shah* at their head, have had two very celebrated Emirs in the course of their history: the Emir Fakhr al-Dīn (q.v.) popularly called Fakhr al-Dīn, in the 16th century and the Emir Dhu al-Faraj (q.v.) in the 17th.

The descendants of Fakhr al-Dīn, of the family of Ma'ni, continued to rule the Druzes till the beginning of the 18th century when the power passed from the family of Ma'ni to that of Shihab.

The Emir Dhu al-Faraj belonged to the family of Shihab.

The withdrawal of the Egyptians from Syria (1849) was followed by a troubled period for Lebanon. There was a reaction among Maronite and the Turkish authorities against the Christians. The Druzes and Maronites had hitherto lived in good relations with one another; but the Turks won over the Druzes with gifts and the allies fell upon the Christians in 1860. The Maronites, attacked on several sides, defended themselves successfully at Dair al-Kamar; but at Hama, they were massacred by the Druzes of Hama acting in name of the Turks. The Porte deposed the Emir and sent an Ottoman governor in his stead at Dair al-Kamar. This appointment roused the protests of the Powers, who did not wish to see direct Turkish rule established in Lebanon.

Their diplomacy resulted in two Kā'im-makāms being provisionally appointed for Lebanon, one a Druze and the other a Christian; the Porte then separated the Djebel Druze from Lebanon, and incorporated it in the Pashalik of Tripoli. In September 1844, two Wakkās were installed in the mixed townships, one for the Druzes and the other for the Christians; these officers were to be subordinate to the Druze and Christian Kā'im-makāms respectively. The Porte next sought to place the Christian Wakkās also under the Druze Kā'im-makām. The Maronites protested, saying they would rather be under the Pasha of Sidon than under Druzes. On the 30th April 1845, the Druzes backed by the Turks again fell upon the Maronites and massacred them. At the end of this year (1845), the organization of Lebanon was completed. The principle of separation of the two races under two separate chiefs was recognized and government by two Wakkās in the districts where the population was mixed. The two Kā'im-makāms, Christian and Druze, retained, assisted by two counsels, one presided over by the Druze Emir, the other by the Christian Emir.

These counsels were composed of ten members each, of whom four were Druze, two Maronite, two Malkite, two Greek and two Muslim. The Christians were therefore in a majority of six to four on them and this plan did not please the Druzes. In 1860 there were again massacres, marked by the most atrocious cruelty, in the Lebanon. Anti-Lebanon, particularly in the districts of Hama, Hama, Zahle and Dahr al-Kamar, Europe is but only a body of French troops was sent to Syria and those responsible were punished.

Following the events of 1860, an international commission devised a new organic statute with guarantees. The Muslim or central administrative council of the Mutasarriflik of Lebanon was composed of twelve members. The Druzes had the right to be represented by three of their number: one elected by the Mudriya of Hama, a second by the Mudriya of Na'ur, and a third by that of Hama. What has not yet absolutely returned to the country. The Druzes and Maronites are at peace with one another but the Druzes are waging a continual struggle against Turkish authority. From 1879 to 1896, the Druzes of Hama were continually fighting bitterly against the regular Ottoman troops. In the latter year the Turks received their submission. Since the Turkish revolution they have become practically independent.

The Druze population has been estimated at a little over 150,000 for the last century or so. In 1842 it was put at 140,000 with 45,000—50,000 fighting-men; in 1855 Taylor put the figure at 120,000 of whom 40,000 were fighting-men. Max v. Oppenheim, in 1899, estimated 132,000 and Camille (1896) 150,000. The Druze population of Hama has been increased by immigration from Lebanon and numbers at least 40,000 souls.

The Druzes are a warlike, energetic, and valiant people; they would make very good soldiers if their independent spirit did not make them preferably brigands. They can be very crafty; the desert is their element. In spite of their warlike disposition they have some ability as agriculturists and grow the vines which yield the fine Damascus grapes and also mulberries, olives

and tobacco. Their women wear and embroider very fine clothes. In their dress the Druzes are distinguished by the turbans which is of black or red silk. Their women used to wear a peculiar head-dress called "kumr". This was a kind of very high hat which turned over behind; it was of silver or gilt copper among the rich and of polished wood among the poor. It was fastened by means of a kerchief tied under the chin and by agates around the head. A roll of white linen or dark blue silk hung from the top, attached to the horns by black strings of camel-hair. This head-dress was worn by night as well as by day. The woman's dress was a short, dark blue tunic, bordered by a broad reddish lower band, with stripes of the same colour on the back, unbrokked trousers and yellow shoes.

Religion. The Druzes have as a rule but little religion; they call themselves Sufiites, when with Muslims, and Christians, when with Christians. They have no places of worship. What is called the Druze religion is a heretic system which is not known to all the people. Those who know it, are called "Ukād" (the learned); the others are the "Zuād" (the ignorant). The "Ukād" alone take part in the religious meetings which are held in the night from Thursday to Friday. The place of meeting is called "Khalwa" (retirement). The most mysterious of the "Ukād", in the proportion of one in 50, become "Khalwa" (perfect).

Belief in metempsychosis is widely spread among the people; the good are born again in infants, but the wicked return to the bodies of dogs. Polygamy is allowed and it is said that the marriages of Druzes and Christians are sometimes practised; but the law forbids this (cf. de Sacy, li. 700).

The religion of the Druzes in its limited form, belongs to the Muslim system. It was founded in the time of the Fatimid Caliph Hakim (383—411 A. H.) by Hamza [q. v.] and Basmal [q. v., p. 124]. It is known to us from over a hundred works to be found in European libraries. These scriptures, some of which go back to Hamza are professions of faith, explications of doctrine, works dealing with the organization of the sect, diplomas for the installation of different ministers, letters, arguments of polemics against the Sunnis and the Muawwalis, neighbours of the Druzes, against the Malikites, from whom they separated and against several ministers and missionaries who had accepted the doctrine from the beginning. These dissenters are accused of preaching heretical doctrines and favouring the worship of the calf. The figure of a calf actually appears in the ceremonies of the Druzes and some authors say they worship it, but it is probable that in the true religion the calf is the symbol for the demon and only appears as an object of veneration.

The Muslim doctrine was based on the idea that God became incarnate in man in all ages, and God himself or at least the creative force, was considered as composed of several principles which proceeded one from the other. Each of these principles became incarnate in a man. Druze theology retained this system. According to it the Caliph Hakim represented God in his unity; this is why Hamza called his religion "Unitarian". Hakim is worshipped and is called "Ukād". His eccentricities and his cruelties are explained symbolically. He was the last incarnation of God; they do not admit that he is dead, he is only

thereupon went to al-Haiy and summoned his nephew, Sulṭān Maḥmūd to his side and he obeyed the call. The two Sulṭāns thereupon came to an agreement. Saʿīdīr interceded with Maḥmūd on behalf of Ḥubāib, who wished to return to his home in al-Hiḥā and be forgiven by the Caliph. But nothing came of this through Ḥubāib's fortunelessness; after twice plundering Ḥaiy he had to flee to the Arabian desert. While here he received an invitation to come to Ḥaḥḥād; the lord of this place had died and his concubine made an offer of marriage to Ḥubāib in the hope of thus being able to remain mistress of the place. Ḥubāib did not hesitate to accept this invitation, but lost his way in the desert and was captured by some Ḥabībī Bedouins, who handed him over to Ṭāḥī al-Bulāḥ Ḥūr, lord of Ḥammām. The latter sent him to 'Ibrāhīm al-Dīn Zangī, lord of al-Baḥrā, who wished to turn him beside him as he could be useful to him in his plans. We soon find the two jointly undertaking a campaign against the Caliph in 526 (1132), but with disastrous results; they were put to flight by the Caliph. Ḥubāib managed to hold out for a time in al-Hiḥā and Wāḥī, but had finally to give up the struggle. He next attached himself to Sulṭān Maḥmūd, who in 529 (1135) took the Caliph prisoner in battle and brought him to Marāgha. There he was treacherously murdered, according to some accounts at the instigation of the Sulṭān, who is even said to have put Ḥubāib to death also, to avert suspicion from himself. While Ḥubāib was waiting in the audience-chamber one of the Sulṭān's pages came up to him unawares and cut off his head. "Thus," says Weil (*Geschichte der Chaisen*, II, 231 ff. 232) "within the interval of one brief month towards the end of the year 529, died the only two Arabs, who, although they had always been sworn foes, had always endeavored to be little the aggressions of foreign rule. They were both of very untellable character and followed a selfish policy. — Both were moreover well liked as men and honored as poets and patrons of poets. — Ḥubāib has been given immortality in a madrigal of Ḥarīrī (2222), in which the poet describes him as one of the noblest figures in Islām."

AL-DUBB AL-ʿARABĪ and **AL-DUBB AL-ANBARĪ** = the Little and the Great Bear, the translation of the Greek names *Ἀρκτος μικρὸς* and *Ἀρκτος μεγάλος* the two northern constellations. The older Arabic name for these constellations was *Ḥanāt Naḥḥ* (for *Ḥanāt al-Naḥḥ*) = the daughters of the star, *al-Naḥḥ* for the Little and *al-ʿArḥ* for the Great Bear. Ḥarīrī remarks that the stars which form the quadrangle are called *al-Naḥḥ* (the star) and the three that form the tail are called *al-Ḥanāt* (the daughters). Gullīn (edition of al-Farghānī, *Notes* on p. 54) thinks that these daughters are the women mountaineers who precede the bear. — The feminine form *Ḥanāt* (in the medieval *Ḥanāt* written *Ḥanāt*) particularly designates the *Ḥanāt* = Ursa Major; this name probably comes from the Latin translation of the *Tabulae* of Alfonsus, which we know were originally written in Cassian (1252).

DUB AL-KAZZ, the Silk-worm; Ḥarīrī and Ibn al-Dīnār give accounts of its culture which supplement one another and may therefore be dealt with separately. According to Ḥarīrī, the worm, when it has eaten enough, seeks a place on trees or thorns, *Aras* this thread out of its saliva, and weaves a hall around itself as a protection from wind and rain; it then sleeps its appointed time; all this is done through the instinct given it by God. In spring, when the leaves of the mulberry tree appear, the eggs *ḥanāt* are taken and placed in pieces of cloth; women carry them for a week under their breasts, so that the warmth of the body affects them; they are then spread on chopped mulberry leaves, whereupon the young worms begin to move and eat the leaves. The caterpillars do not eat for three days — this is the "first sleep" — then they eat for a week till the second sleep of 3 days when the same proceeding is repeated. A good deal of food is thus given them, so that they soon begin to make cocoons (*ḥanāt*). A thing like a spider, with legs to appear over their bodies, also spin silk and within the cocoon, the worm places it and crawls out; it has now grown two wings and it flies away to which case no silk (*ḥanāt*) is obtained from it. But when the cocoon is placed in the sun after it is finished, the worm dies and the silk may be taken from it. A number of cocoons are preserved so that the fly may come out and lay eggs, which are kept till next year in a clean earthenware or glass vessel.

According to Ibn al-Dīnār, the silk-worm or *Ḥanāt* worm in the egg stage is as large as a fig-stone; the creatures come out, when placed in warm places, without being artificially hatched, but they are placed in their houses by women if they do not come out at the proper time. They eat the leaves of the white mulberry tree and gradually attain the size of a finger while their colour changes from black to white. This takes about 40 days. The worm then weaves a covering of the size of a walnut till the material is exhausted and remains ten days in the cocoon, when it comes out as a white butterfly with wings, which are constantly in motion. Soon afterwards the males and females copulate by sticking their tails to one another, and after they have separated, the female lays her eggs on white pieces of cloth, spread below it to collect all the eggs, the cocoons then die. If silk (*ḥanāt*) is wanted, the cocoons should be placed ten days after they are finished in the sun for one day.

The silk-worm is the mistress of the mine, who lays up treasures for herself, which his mocking fellow takes; if these however make good use of the wealth that has fallen to them, they are not responsible for the woe of the mine.

DUBJAIL (See *ḤANĀN*.)

DUGHLAT or **DUGLAR**, originally the name of a Mongol tribe: Raḥīl al-Dīn (ed. Ḥarīrī, *Ḥanāt*), ed. *arab. whāḥ*, III, text, p. 47 and

32, given as their ancestor, Badaqhat Daghla, a brother of Tughlugh Khan's great-grandfather. It has not yet been ascertained what was Abu Tughlugh's (ed. Demssissius, p. 63) authority on the explanation he gives of the word *Daghla* (he says it means 'stone' in Mongol). In English al-Din neither (like nor any other explanation of the word is given; but this etymology must date from the period of Mongol rule, for as Scerif (Transl. etc., xlii, 180), shows, there is actually in Mongol a word *daglan* meaning 'stone'. Abu Tughlugh and his contemporaries did not, of course, know Mongol. Scerif, on the authority of Abu Tughlugh's explanation, transcribes the name of the tribe as "Dughlan", in the plural "Dughlats" and in this he is followed by others; but this transcription is ruled out by the form "Daglat" which is now the usual one in Central Asia.

Of the history of the tribe, Rashid al-Din can only tell us that, during the tribal feuds out of which the Mongol empire was to arise, it always took the side of Tughlugh Khan, and that nevertheless, neither in this period nor at a later did a sign of any note appear in the ranks of the Tughlugh (Transl. etc., vii, 275). In the second half of the 13th century, on the contrary, we find the Dughlats in Central Asia as an important tribe, representatives of whom held prominent positions not only in the empire of Timur and his successors, but in the eastern provinces of what had been the Tughlugh Khan's (p. 111, 112, 113) kingdom also. In the *Tarikh-i-Arkan* of Sharaf al-Din Yuzbaki the Khan of the Dughlat tribe, the husband of Timur's sister Gulshah-Tarkan, is frequently mentioned as a military and general, and once (Ind. ed., i, 228) as military governor (*Amir*) of Samarkand. The Dughlats were still more important in the modern Chinese Turkestan, where they ruled a wide kingdom as local princes, and sometimes also the whole country as emirs and were able to raise to the throne and depose (pieces of the ruling house as they pleased. What we know of the history of these princes is derived almost entirely from family traditions, not always thoroughly to be relied on, contained in the *Tarikh-i-Rashidi* at the time of their time, Muhammad and Iskander Daghla. As was done in MS. *al-Din* for Timur, a legend is invented in this work for the house of Dughlat, according to which its founder ruled the same territory and enjoyed the same privileges under Tughlugh Khan as his descendants at a later period; in one passage of the *Tarikh-i-Rashidi* (Transl. Rom., p. 7) Urali is given as the founder of the line, to another (Ind. p. 294) Ishkubghin (or Ishkubghin). His successor Hishir (in Abu Tughlugh, ed. Demssissius, p. 156, 157) *Fuladli*, a form, which is linguistically rather explained, but has no authority in the manuscript, is said to have raised Khan Tughlugh-Timur to the throne in Afghanistan about 748 = 1347 (*Tarikh-i-Rashidi*, p. 6, 11, 12); on the other hand, the same authority (p. 14) gives not Urali, but his elder brother and predecessor (p. 35) Tullik as the reign of Tughlugh-Timur = last ends of the kingdom (Urali, 121). Hishir, while in Ghazni, to the year of the pag. is said to have received a document from Tughlugh-Timur in which the "nine privileges" (*Tarikh-i-Rashidi*, p. 38, 11, 12) of the Khan's house were recognized. This cyclic year would correspond to 1313, while Tughlugh-

Timur according to the *Tarikh-i-Nizam* (i, 59) did not come to Keshmir till the year 1361 (the year of the ox); the above doubts on the authenticity of the document. Muhammad Hishir says that he had with his own eyes seen the document which was written "in the Mongol language and characters"; it was afterwards lost, "during the troubled times of the last Khan" (p. 59). An Hishir died in 916 = 1510 and the author, as he himself tells us (p. 305), was 45 years old in the year 920 = 1514 (the cyclic year of the ox); given these conditions in 1313, but he could only have seen the document while quite a boy.

The *Tarikh-i-Arkan* and *Tarikh-i-Nizam* have given amongst others in the *Tarikh-i-Nizam* a brother of Badaqhat who is mentioned nowhere else. The former speaks also in the *Tarikh-i-Nizam* (i, 104, 11, 12) as a brilliant Amir, who was in command of the Mongol army in the year 1303, year of the snake; but nothing is said there of his being a member of the Dughlat tribe or of his relationship to Khan al-Din. Khan al-Din is first mentioned in the *Tarikh-i-Nizam* (i, 175) in the year 1368 (year of the ape) as leader of the Mongol army; he had slain his Khan Hylah Khanga was a Dughlat-Timur, and seized the supreme power. He is last mentioned in the same work (i, 494, 11, 12) in 1390 when, defeated by Timur, he had to take flight to the Irish and thence farther south "into the land of Tulu", where there are many tribes and empires. His brother Khat al-Din (not mentioned in the *Tarikh-i-Rashidi*) entered Timur's service and, in the year 1393, took part in the siege of Taku in Mesopotamia (*Tarikh-i-Nizam*, i, 650).

After Khan al-Din had been overthrown the power passed into the hands of Khondakht, son of Badaqhat, at the time of his father's death, shortly before Tughlugh-Timur, i. e. about 1360. 1312 he was seven years old (*Tarikh-i-Rashidi*, Khondakht and Hishir Khanga, presumably a son of Tughlugh-Timur, proclaimed Khanga, he is said to have appointed other men Khanga in the Mongol empire in course of time (Ind. p. 67, 11, 12). Khondakht is not mentioned in the *Tarikh-i-Nizam*, according to the *Maqalat al-Hakim* of 'Abd al-Rahman Samarkandi (q. v., p. 64), who in this passage is only quoting the text of the *Shahid al-Tamim* of Hishir-Abrar with a few alterations. He always took the side of Shih-Nagh and Uluq-Beg, even against his own Khanga (the latter called till 1377 = 1400 in the name of his father in Samarkand). When in 1388 = 1423 Uluq-Beg undertook a campaign against the Mongol empire, Khondakht passed his army on the other side of the Oxus in the present district of Samarkand and was received by him with the honors due to one of his advanced years (*Shahid al-Tamim*, MS. in the Univ. of St. Petersburg, No. 157, l. 230^b). This occasion to the enemy of his native land is caused by family tradition on religious grounds: Khondakht had long intended to perform the pilgrimage to Mecca, but could not receive permission from his Khanga and was only able to carry out his desire by an alliance with Uluq-Beg; he afterwards died in Mecca and was buried there (*Tarikh-i-Rashidi*, p. 60, 11, 12). The same authority tells us that Khondakht ruled for 20 years and went on his pilgrimage when 97; according to the dates given above, however, he could not have been more than 70 at the time.

at Venbu. According to a Sogdian legend she retained her vigour so long that 'Ali was able to ride her in his campaigns against the Khazars. She had been sent Mohammed as a present with the ass 'Ufay, by Makhzumi; this was the first occasion on which the Muslims had seen a she-mule. According to another tradition, which connects Dulful with another she-ass called Fihla, Mohammed had received her from Faras b. 'Amr al-Dihlami. The name Dulful properly means "pincupine" (*Tafsi al-'Arabi*, vii. 324; *Qamūs al-'Arabi*, xiii. 283), but as this name is not a very appropriate one for a she-mule, it was probably only with reference to its speed that it was given.

DULFIN, the Arabic form of the Greek δολφίν (also δολφίς), is the name given by the Arabs to the constellation of the Dolphin. The older or popular name among the Arabs was *al-Sayf* = the sword, and the meteoric star of the constellation was called *'Izzat al-Sayf* = pillar or base of the sword (the astronomers call it *al-Nawāz al-Dulfin* = tail of the dolphin). In Kharini we also find the name *al-'Izzat* probably to be translated "the pearls" (of the necklace), for the four stars which are close together forming a trapezoid.

DULUK, a place in Northern Syria, N. W. of 'Amid (q. v., p. 284), is the ancient Dolichen, at the junction of the roads from Germanicia and Nisopolis to Zeugma. Dulūk, which was captured by 1500 E. Yphania, was one of the fortresses on the Euphrate frontier (cf. 'Abū al-Ḥāṣim's note in *Yāqūt*, ii. 383 and Noides's note on it in the *Journal of the Asiatic Society, Constantinople*, xlv. 700) and at a later period belonged to the Emirate of Aḥmad (q. v., p. 515 of *op.*); constituted by Ḥafṣ in the wars with the Byzantines of the *thumūdī* *Salṭ* al-Dawla and the great Abū Firas it played a part (cf. *Yāqūt*, iii. 284) and, according to the *al-Aghar*, iii. 404, it was taken by them in the year they took the latter province (333 = 902). The place appears gradually to have lost its importance with the rise of 'Amid. This can be the only explanation of Yāqūt's statement (iii. 259) that 'Amid was once called Dulūk. The name of Dulūk has survived in that of the village of Dulūk-kāi and of Tell Dulūk to the south of it, on which now stands the chapel of a Muslim saint, probably the successor of Zeno Dolichenus (see Cannon in *Pearly-Weaver*, iv. 1276 et seq.).

DUMAT AL-DJANDAL (see *MAWA AL-DJANDAL*).

DUNABIR, a town in Mesopotamia, about 10 miles S. W. of Mardin in lat. 37° 13' N. In the middle ages, particularly under the Umayyads, it attained great prosperity and impor-

tance as a trading centre, as the excavations make that still survive (notably the ruins of two mosques) show. The half ruined Kerd village of Kerd (Kerd = "ancient Khad") (situated to the S. of the town) is often given in a corrupt form by the older travellers) now lies in the area occupied by the ancient town; this name was known even to Yāqūt. To the east of Dunabir lies a low mound of ruins, Tell Ermen, which must mark the site of an ancient town; Sachau identified the latter as the celebrated Seleucid capital of Tigranokerta but C. F. Lehmann's researches now show that this is to be located in Mayāziriya; on this point cf. Streck in the *Zeitschr. f. Assyriol.*, *Morgenl. Gesch.*, lvi. 302. According to C. Hoffmann (*Zeitschr. f. Assyriol.*, *Morgenl. Gesch.*, lxxv. 741), Dunabir should be identified as the Kerkira of Adapaṣal mentioned by Dio Cassius (lxxvi. 23). At the southern base of Tell Ermen lay the large Armenian settlement of Tell Ermen (the hill of the Armenians) which took its name from the hill.

Bibliography. A chronicle of Dunabir (in the main an autobiography) was written about 610 = 723 by the physician al-Buhārī; cf. Brockelmann, *Gesch. der Arab. Litt.*, i. 333; *Yāqūt, Ma'ājam* (ed. Wartenfeld), v. 1; *ibid.*, *Geograph. Arab.* (ed. de Saxe), par. 1; Ibn al-Buhārī (ed. de Saxe, i. 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000).

DUNOAN (DUNOAN, THOAN), the name given to Chibwa Muslim, cf. the name *THOAN*, p. 850; and also the earlier *THOAN* and *THOAN*.

DUNYĀ (dun), the earthly, lower world, this world here below. The word is used in the Kor'an and in Muslim theology in a disparaging sense of "this world" in opposition to the next. Mohammed's use of this word quite recalls that of Christian preachers: "Those that lay this earthly life at the price of the future life, shall not receive any relief from punishment nor shall they be helped" (*Qur'an*, ii. 20); — "We prefer the life of this world; and yet the hereafter is better and more lasting. This is found in the ancient books, in the books of Abraham and Moses" (*Qur'an*, lxxviii. 16—19). We see from the latter quotation that Mohammed did not claim to be original when making exhortations of this kind; but what he here attributes to Judaism, ought to have been referred to Christianity.

The Imam al-Ash'ari quotes another passage which contains rather a fine picture "I warn you" he writes "against the world, it is a brilliant coloured and flower meadow, which deceives its inhabitants as the Kor'an tells us: "Propound unto them the parable of the life of this world; it is like the water we send down from the heavens; and the plants of the earth are mingled with it and on the next morning, they are dry, and the wind scatters them, for God is all powerful" (*Qur'an*, xli. 17—19). All that is on earth shall pass away (iv. 35); prepare therefore your works in view of the lasting abode and eternal life.

The organisation and duties of the Dwa'ir. The Bey of Oran had four Aghas under him, to represent him among the tribes. Two of these posts were reserved for the Dwa'ir, i.e. for the families of Hashim al-Boukhari and al-Kardl and two for the Zmils. These important offices were much sought after and were not granted without payment. At their nomination, the Aghas of the Dwa'ir paid to the Urdan of Algiers the sum of 40,000 *ryals de gis* (about £2500) for the right of wearing the *gandara*, a kind of uniform of office. The Aghas of Zmils only paid 20,000 *ryals de gis* for the same reason. The Aghas, while on active service, also paid a similar sum into the Bey's treasury every six months. The two Aghas received one another annually. Their armed men paid annually a trifling sum to the Bey's treasury, the *agur-tax*, which relieved them of all other impositions. The Urdan and the Zmils had the privilege of collecting taxes in the immense province of South Oran called *Ya'qubiyah* which stretched from the neighbourhood of Mascara and the hills of Tlemcen to the *Mebel Amir*. The taxes paid by the tribes of the *Ya'qubiyah* to the Bey through the intermediary of the Dwa'ir, consisted of slaves of both sexes, wool, sheep, sleeping-carpets, red leather for saddles, bridles, native hoods (*imofes*), horse-covers, camels and the *feras* (tribute in silver). Besides having to collect the tribute from the western part of *Ya'qubiyah* province, the richest part, the Dwa'ir had also to police the tribes of the west of Oran.

The Dwa'ir since the French conquest. The capitulation of Algiers in 1830 surprised the Turco of Oran and their *Makhzen* for when they had pacified through terroring them, the tribes who had been agitated by the machinations of the Sultan of Morocco. The Arab tribes believing that Turkish rule was at an end, rebelled against it everywhere. The Sultan of Morocco seized the opportunity to attempt to get himself proclaimed sovereign by the people of Tlemcen and the whole province. The Bey Hasan of Oran, the *Khalifa* and *Kalughla* of Oran and Tlemcen and the *Makhzen* people seeing that the French government did not seem their adversary, sought another way out of their difficulty. The Bey set out for the East. The *Kalughla* of Tlemcen and the *Makhzen* tried to save the situation by relying on *Malay Ali*, the *khallid* and nephew of the Sultan of Morocco, who had been sent in great haste to possession of the province. The Agha of the Dwa'ir, *Muhammad b. Ismail*, was retained in his office and further received command of 1000 horsemen of the Sultan's negro guard (*Abid*) to go into the *Masrah* and *Masrah* districts in proclaim the Sultan. But *Malay Ali*, who was badly advised, did not know how to win the *Kalughla* of Tlemcen or his side. He allowed his officers, greedy of plunder and deceived by the natives, to fall upon their allies the Dwa'ir, to plunder them and carry off their money and cattle. The Sultan of Morocco seeing his nephew's incapacity had to recall him. The celebrated Emir *Abd al-Kadir b. Muhyi al-Din* replaced him. The latter from the first endeavoured to get *Muhammad b. Ismail* and the other *Makhzen* to join in the holy war against the French. *Muhammad* then in preliminary negotiations with the French, would not move; his nephew *Malay*, on the other hand joined the Emir. Henceforth their tribes were

divided; one section followed *Malay* to *Abd al-Kadir*, while the other remained with *Muhammad*. But General Desmichels having been appointed commander of the troops in Oran, the French advances ceased. *Abd al-Kadir* having numbered the tribes to a holy war in May 1833, the Dwa'ir and their chiefs came to take part. *Muhammad* however, on his own way and received the same honours from his men as *Abd al-Kadir* did from the other Arabs. After their defeat, the Dwa'ir and the *Zmils* with *Muhammad b. Ismail*, still held themselves aloof. To prevent them joining the French, *Abd al-Kadir* endeavoured to win them to his side. It happened that to obtain the submission of the *Angal*, one of the tribes of the former Turkish *Makhzen*, the Emir had been obliged to grant them certain pastures, claimed by the *Ham* *Amor* as their property. The latter enraged refused to pay the tribute they had previously agreed to pay. The Emir sent *Muhammad b. Ismail* and his Dwa'ir against them. The *Ham* *Amor* submitted at once and the Emir tried to stop *Muhammad*. He was too late, for the *Ham* *Amor* had been annihilated and their chief killed. The quarrel that arose between *Muhammad* and the Emir, resulted in a series of domestic combats. The Emir was defeated severely at *Hennaya* and at *Siklak* near Tlemcen; his undisciplined Arabs could not stand the unwavering charges of the Dwa'ir cavalry. He would certainly have been exterminated if he had not found help with the French, who did not properly understand his case. Before such an alliance, *Muhammad* thought it prudent to take flight to Morocco and enter the Sultan's service. He was the latter at a present the lucky won *Abd al-Kadir*, including a golden parazon presented to the Emir by the *Kalughla*. It was a difficult matter to restore peace but in the end the Dwa'ir submitted; *Muhammad* refused to remain in their head and entrenched himself in the *Mesgham* (a fortress of the *Kalughla* of Tlemcen which held out against *Abd al-Kadir*) with 50 Dwa'ir families. They continued to fight bitterly against the Emir.

The Emir *Abd al-Kadir* seeing that he would not succeed in subduing the *Kalughla*, retreated the wings of *Mesgham* to the Moors of Tlemcen, their enemies, and retired to *Mascara* where his headquarters were. The Dwa'ir and the *Zmils* who had embraced his cause on the return of *Muhammad* from Morocco and the facile reconciliation between the two chiefs, were placed under the sole command of *Abd al-Kadir*, the Agha of the *Zmils*. But the latter was not long in seeing that the Emir could not protect them against the French. General Desmichels, after the occupation of *Mesgham* in August 1833 carried off their families and their flocks to punish them for the support they had given his adversary. They were forced to come to beseech him to make peace and restore their families and property. The majority submitted and pitched their tents on their lands around Oran under the supervision of French troops. They were settled in *Masrah* (September 1833). They elected as their chiefs, *Isma'il al-Kadi* and *Adila b. Osman* for the Dwa'ir and *Isma'il al-Kadi* and *Isma'il al-Kadi* for the *Zmils*. Since then they have always shown themselves faithful to France and fought with her troops even against their kinsmen who remained in the ranks of *Abd al-Kadir* (Tlemcen, 1834).

Suddenly the rising of Sidi l'Arif in the valley of the Shail and of the Deshwa St Mass in the south against the Emir 'Abd al-Kadir and the appointment of General Trézel to Demichels' command, gave renewed hope to Magasid b. Isma'il, the irreconcilable enemy of 'Abd al-Kadir. In name of the Khalghis of Tlemcen and the Deshwa he made overtures to the French general who, however, did not accept them. But these overtures enabled the French officers to begin relations which were later to be a source of great trouble to the Emir. The latter was not ignorant of these negotiations and, relying on the devotion of the Khalghis of Tlemcen to him, he tried to win the support of the Deshwa and the Zmala, either of their own free will or by force. Besides, the example of the latter was encouraging other tribes to trade and negotiate with the French. In June 1835 therefore he sent to the two Maghzen tribes al-Mazari, the Agha of the Zmala who had remained faithful to him, to persuade the Deshwa and the Zmala of the country round Oran to return to Mascara and to sue for it if necessary. Mazari did not succeed in his mission; in his wrath he had his own nephew Isma'il al-Radi, Agha of the Deshwa of Oran, thrown into chains and was about to hand him over to the Emir 'Abd al-Kadir when his own Zmala threatened to mutiny if he did not set Isma'il free, which he did. Mazari retreated just as the French, who had been warned, were setting out to pursue him.

On the 16th June General Trézel pitched his camp at Figueras, a few leagues from Oran, to protect the Deshwa and Zmala who had declared against 'Abd al-Kadir. There he received envoys from these two tribes and signed a treaty with them by which they recognised French suzerainty, placed themselves under the protection of France (art. 1) and entered her service as Maghzen troops (art. 2). This treaty provided a declaration of war against General Trézel by 'Abd al-Kadir.

Mustafâ b. Isma'il was installed; he renewed his office which were accepted by Claret, the new governor. He succeeded in obtaining French permission to undertake an expedition to relieve the Khalghis of Tlemcen who were besieged in their stronghold by the Moors of this town, who were partisans of 'Abd al-Kadir (Jan.—Febr. 1836). He himself regained his rank as head of the Deshwa. Henceforth there was not a military expedition in Eastern Algeria in which the Deshwa and the Zmala did not play a prominent part. Magasid himself, in spite of a wound which shattered his right hand in the battle of Sikkal (1837), never ceased to set an example of courage and loyalty to France to his tribesmen. After every battle he received some new distinction and when distinctions were exhausted, Louis-Philippe appointed him *Marschal de Camp*. It was in this capacity that he took part in the Mascara and Tadmert expeditions of 1841. In 1843 he took part in the capture of Senala from 'Abd al-Kadir

and, while returning to Oran with his Deshwa laden with booty, he was shot in the chest by an Arab as he was crossing the Filiz country. He fell dead on the spot; he was nearly eighty years of age. With his death the heroic age of the Deshwa and Zmala came to an end, but they have continued to be loyal to the French authorities. Whatever may have been the personal motives that drove Magasid b. Isma'il and his men to the side of 'Abd al-Kadir's enemies, they nevertheless filled a glorious page in the history of Algeria.

Bibliography: Anonym, *Deshwa et Zmala* (Oran, 1833), pamphlet (the work is an epitome of a map attributed to Agha al-Mazari and preserved in the *Muséum d'Oran*); Pellissier de Raymond, *Annuaire Algérienne* (3 Vols., Paris and Algier, 1834), pamphlet; W. Demichels* (Paris, 1835), pamphlet; C. Rouvier, *Le Commandement d'une compagnie*, in the *Revue des deux Mondes* (1835 et seq.), pamphlet; Ahmed b. Khalid al-Nadiri al-Silami, *Asma' al-Hakim* (Cairo, 1312), iv. 184—192.

(A. COUV.)

DWIN, formerly one of the most important cities in Armenia, now an unimportant village south of Erivan, a little above the ruins of Artaxata (Artakha), in lat. 40° N. The etymology of the Armenian name *Dwin*, Syriac *Dwini*, Greek *Δωίνι* (Dioninon), Arab *Dahil*, is unknown; the form *Dawin* and *Tawin*, which frequently occur, are wrong. The city was founded by the Sassanid Khusro II, who built it in 350 as the capital of the Persian section of Armenia. When, on the deposition of the last Arsacid, Artakha in 429, Persian Armenia was completely incorporated in the Sassanid empire, the seat of the Persian government was transferred to Dwin; cf. above p. 437. Under the Arabs also Dwin retained this position; throughout the Caliphate it was the capital of Muslim Armenia; see above p. 444. In the middle ages the town had a large population and was celebrated for the cloths and carpets manufactured in it and the surrounding district (particularly appreciated were its purple carpets); see above p. 446.
